"It would be, perhaps, improper, while speaking of Cribb, to omit mentioning, that, during his residence in the north of Scotland, he conducted himself in all respects with much propriety. He showed traits of a feeling, humane, and charitable disposition, on various occasions. While walking along Union street, in Aberdeen, he was accosted by a woman apparently in great distress. Her story affected him, and the emotions of his heart became evident in the muscles of his face. He gave her all the silver he had in his pocket. 'God bless your honour,' she said, 'ye are surely not an ordinary man!' This circumstance is mentioned with the more pleasure, as it affords one instance, at least in opposition to the mistaken opinion that professional pugilists are ferocious, and totally destitute of the better propensities of mankind. The illustrious Mr. Windham entertained juster sentiments of the pugilistic art, as evinced by a print he presented to Mr. Jackson, as a mark of his esteem. In one compartment an Italian, darting his stiletto at his victim, is represented; and, in the other, the combat of two Englishmen in a ring. For this celebrated genius was always of opinion, that nothing tended more to preserve among the English peasantry those sentiments of good faith and honour, which have ever distinguished them from the natives of Italy and Spain, than the frequent practice of fair and open boxing."

The next anecdote will corroborate the opinion above expressed.

*Tom Cribb and the Pig.*—During the time Tom was in training, previous to his match with Gregson, as he was taking his morning's exercise through a country village, accompanied by his friend Gully, dressed in long smock frocks, they observed an overgrown fellow beating a pig in a very cruel manner. Upon inquiry, they found the animal belonged to a neighbour, and civilly begged him to desist from such cruelty. The fellow abused them for their interfering, and, relying on his strength, threatened to give them both a good hiding, assisted by three or four hawbucks, who had joined the squabble. Without farther ceremony the fellow put himself in an offensive attitude, and made a violent blow at Cribb, which the latter stopped with the utmost sang-froid, not forgetting to put in his one-two so tremendously, the effects of which floored this unfeeling brute in a twinkling. His nob was materially shook, and the claret tapped in a masterly style. This small taste of Cribb's quality had the desired effect. The fight was instantly taken out of the chaw-bacon, who went off, growling to himself, from the scene of his cruelty and impertinence; but not, however, before receiving an admonition from the Champion to be more temperate in his language, and humane in his conduct in future. Gully, smiling to himself, now wished another of these Johnny Raws, who had been also very busy and impudent, to try what he could do with him, observing, "that he might have better luck than his fellow servant!" But in vain, the milling specimen exhibited by Cribb had completely terrified all their boasted valour into submission. It was soon afterwards learned in the village, that the row in question had been with Gully and Cribb.

The Champion of England was blowing a cloud one evening (in 1817), among some of his friends, at a sporting house in the vicinity of Tottenham-court-road, when his capabilities as a boxer were not only much undervalued by a limb of the law who was present, but his courage treated with the most sovereign contempt. Tom, who had already faced so many brave men in the ring without dismay, merely smiled, and most stoically bore this unmerited attack; well knowing the slightest movement of his mawley against the man of red tape would be so twisted to his disadvantage that he must ultimately be floored. With much good judgment, therefore, Tom retired in silence. The Champion, however, determined to see what sort of pluck this *soi-disant* "gentleman" of the law possessed, provided himself with a pair of pistols, and called on him the next day that he might give his insulting opponent an honourable opportunity of meeting him upon equal terms. After much bustle, explanation, and discussion, it turned out exactly after the adage, "that great talkers do the least;" in brief, Latitat was returned *non est inventus*. This circumstance occasioned immense fun in the sporting circles, and the good temper and extraordinary coolness of this first of boxers received its due meed of praise.

"Time! time!"—Cribb, one evening, in October, 1817, in conversation with Belcher, at the Castle Tavern, Holborn, was suddenly attacked with a sort of apoplectic fit, and dropped his head upon a table near him. Upon being raised, his tongue was protruding from his mouth, his eyes open, but fixed, and he appeared insensible to all around him. Belcher, much alarmed, instantly took off his handkerchief, opened his waist-

coat and shirt-collar, and sluiced his face with cold water, loudly calling out "Time! time!" The expedient had the desired effect; the Champion immediately rose up, as if in the ring, saying, rather indistinctly, "I'm ready!" but, looking confusedly around him, again relapsed into his former state of stupor. Painter assisted Beleher in shaking Cribb about, in order to restore animation; and from the application of more cold water sharply sluiced in his face, in the course of a few minutes they succeeded in restoring the Champion to the possession of himself, who gratefully acknowledged the exertions of his friends towards him.

The Champion was not easily put off his guard, though often provoked by a number of designing fellows who wished to make a property of him, as the following fact exemplifies:—One Jacquot, a hackney coachman, perceiving Cribb walking with a gentleman, on Jan. 19, 1816, in order to ridicule his calling, and to bring Tom, if possible, into contempt, went close up to him, and kept calling out, "Coals—coals, do you want any coals?" with other insolent expressions. But Cribb was not to be moved by this silly fellow's conduct, and took the proper mode of convincing him of his error, by summoning him before the Commissioners of Hackney Coaches, who, without hesitation, upon hearing the charge, fined him ten shillings.

At the Fives Court on the occasion of Scroggins's benefit on Tuesday March 23rd, 1819, CARTER who then aspired to the Championship, made his appearance on the stage; and a glove being thrown up as a sort of defiance, the Champion of England presented himself, to answer the challenge; but upon Gregson ascending platform to spar, Cribb was about to retire, when "Cribb, Cribb!" was vociferated from from all parts of the court. The anxiety was so great, that the disturbance was hardly appeased until Cribb appeared ready for the combat. Cribb looked well and kept his position like a rock; he could neither be drawn nor stepped in upon, and the skirmishing tactics of the Lancashire hero could make no impression on the veteran of the ring. At infighting Cribb also decidedly took the lead; Carter put in one or two facers with much dexterity; but upon the milling system the black diamond proved that he was still a diamond, and instead of losing any of his former brilliancy, he shone with increased lustre and effect. It was a most interesting set-to, and the amateurs appeared to relish it with the highest taste of the art.

From this period Carter seems to have fancied a shy at Cribb, and on his return from Ireland on Tuesday, February 1, 1820, he challenged the tremendous man of colour, Sutton, for 100 guineas a side. While this match was on, Carter called in at a sporting house, at the west end of the town; and, in consequence of his not being admitted into a private party, then assembled, he intemperately addressed a note to the chairman as "Mr. Swell." He was, however, admitted, when he had the bad taste to begin flourishing about his repeated conquests over the dark part of the creation; also sneering at the Champion, saying, he had left off fighting, because fighting had left him off; but he (Carter) had come to fight somebody, and indeed he would fight *anybody*! This sort of chaffing was attempted to be checked by a person present, when the Lancashire brute, *sans ceremonie*, threw the contents of a glass of wine in his face, part of which alighted on Tom Cribb. This insult was not to be borne, and the Champion of England exclaimed "it was wrong!" Carter hereon defied him: little parley ensued, ere the lion of the ring, although rather worse for the juice of the grape, grappled his enemy. In fact, he held up the Lancashire hero, with the utmost ease, with one hand, in the Randall style, and Carter's frontispiece received such repeated quiltings from the fist of Cribb, that it was like a fashionable footman paying away at a knocker. It was close quarters—in fact, yard-arm to yard-arm; but the heavy shot of the first rate, although long laid up in ordinary, and nearly invalided, told heavily on the mug of his opponent. It was an up and down contest, and the Champion made such good use of his time, that his opponent was quite satisfied he had enough, and begged, in a piteous manner, that some person would take Cribb away from him, or else he should be killed! This entreaty was at length complied with; and upon the fallen hero getting upon his pins, the lads of the fancy buffed it, from his altered appearance, that it was meeting an old friend with a new face. This severe thrashing scarcely occupied Cribb one minute! He did not receive a hurt in the slightest degree. Carter upon feeling his mouth, declared that part of his railway had departed.

(To be concluded in our next.)

THE LANDRAIL.—This very delicious eating bird (for a figure and description of which see the Second No. of the SPORTSMAN'S MAGAZINE.) has been somewhat plentiful in Hampshire this year, and a few brace were killed on 25th of last month. They were one lump of fat, and came to the table in prime order. They eat like no other game bird, for they partake of a mild richness which singularly characterises their species. I do not remember ever to have seen one of these birds, among the extensive and varied collection of the London poulterers, nor is it by any means a common bird in this country. It is in this neighbourhood (Miford) called the corn crake, and it migrates, as soon as the October frosts set in, to Spain, where it enjoys more lenient winters than our island affords, whereas, the water-rail, its congener, stays with us all the year round, and may be met with in most of the marshy districts. Pheasants are plentiful in our neighbourhood.—[From a Hampshire Correspondent.]

## THE HUNT.

"Oh! give me a place in the stirring chase,  
A dull sky and a southern breeze."

Hark! hark! I hear the huntsman's horn,  
And the southern breezes blow,  
I hear the cry of the ready pack,  
As they forth to the covert go.

Up, up, for who could a sluggard be,  
When that glad note is ringing:  
Up, up, for now the bonny lark  
To the rising sun is singing.

"Halloo! halloo!" the wild halloo  
On Echo's wing is borne back,  
"Hark forward"—there—away they fly  
Through the green-woods beaten track.

Away, away, through the green copse glen,  
The hounds in full cry burst at once,  
And as the din of voices came,  
The hollow rock gave wild response.

O'er hill and dale, and mountain dell,  
His rapid course old Reynard takes,  
Then dashes through the river's bed,  
And onward to the upland breaks.

And by the lonely churchyard stream,  
The stirring notes of horn and hound,  
Awake the silence of that spot,  
And fill with life the scene around.

Though glad the noisy din was there,  
It cannot wake the silent dead  
It will not reach the cold dull ear,  
That slumbers in the narrow bed.

And there is one in silence now  
Sleeping beneath that old beech tree,  
Whose voice oft mingled with the crowd,  
In loudest and in merriest glee.

His horse was first as the hounds they burst  
In tumult on their rising prey,  
And when all was done and the chase was won,  
The brush adorned his matchless grey.

Nor flood, nor fell, his fearless course  
Could stop, while there was ought to gain,  
For he was trained from childhood's hour,  
To stirrup, whip, and bridle rein.

He sleeps his long unbroken sleep,  
In yonder little churchyard glen,  
Nor bound, nor horn, nor murky morn,  
Can fill his heart with glee again.

Wexford, Ireland.

E. J. G. S.

EPIDEMIC AMONG RABBITS.—I have noticed latterly that the rabbits I have shot are, nine out of ten of them, affected with a vermicular disease, which must prove very distressing and irksome to this class of animals. Indeed I cannot calculate upon the mischievous tendency, of this sore malady. My ground is well for dryness, being on a slope or down near Andover, and where we have a stratum of chalk within four inches of superincumbent earth. There is a tolerably sized patch of furze, which affords shelter to the rabbits, and the same abuts on a field of turnips, upon which sad havoc has been made by these animals. On opening the same after being shot, I have found that the livers as well as the viscera have been completely overwhelmed with a broad white vermin, resembling in their form that of the *hirudo sanguisuga* or medical leech, and that the hepatic surfaces have been excessively corroded by these latent enemies, inasmuch that the rabbits have been quite out of flesh, and wear an emaciated appearance. If this epidemic should find its way into our neighbouring warrens, it will prove a very bad thing for the owners, who depend largely upon the demand created in the London market during the opening of their season, which is in the present month.

## NOTICE!

THE SPORTSMAN'S ALMANAC,  
is delivered with every number of the SPORTSMAN'S MAGAZINE, Price THREE-HALFPENCE to Subscribers—SIX-PENCE to Non-Subscribers, after the expiry of the week of publication. \* \* \* Observe! the whole of the Back Numbers, and the MONTHLY PARTS, are in Print, and may be had. Office, 42, Holywell-street, Strand.

# ADVERTISEMENTS.

## NOTICE TO COUNTRY DEALERS AND THE PUBLIC

IT having come to the knowledge of the Proprietors of the SPORTSMAN'S MAGAZINE that many of our Subscribers and the Country Dealers have not only experienced considerable difficulty in procuring the Back Numbers of this paper, but on many occasions have been disappointed in receiving the CURRENT WEEKLY NUMBERS; this is to give notice that all back numbers and parts are in print, and that the current number is published every Thursday at the OFFICE, 42, HOLYWELL-STREET, STRAND.

The Stamped Editions of Nos. 18 and 22, containing the reports of THE FIGHT FOR THE CHAMPIONSHIP, and that of PERLPS and BARNASH are still on sale. With the present No. is presented "THE SPORTSMAN'S ALMANACK, for 1846."

N.B. In No. 29 will be contained a full report of the Important Fight between GILL of Coventry, and NOBLEY of Manchester. Observe, this will be published on Thursday, Nov. 27th, two days after the battle.

GIVE YOUR ORDERS EARLY.  
SPORTSMAN'S MAGAZINE OFFICE, 42, HOLYWELL-STREET, STRAND.

QUEEN'S HEAD, QUEEN'S HEAD COURT, WIND-MILL-STREET, HAYMARKET.

JEM BURN Respectfully Announces to the patrons of the Good Old English Art of Self-defence, that he has re-opened his great room, where the illustration, exhibition, and practice of Sparring will take place every Monday evening during the winter-months. Master of the Ceremonies, and Gentleman-usher of the Bunch-of-fives, Uncle Ben. Johnny Hannan, and several top-sawyers, will put on the muffers, and "teach the young idea how to shoot."

The snugger affords an admirable retreat for the Corinthians, the club-room is commodious for the commonalty, the champagne celestial, the port potent, the brandy without any admixture of B.B., and the malt of all sorts miraculous. God Save the Queen! (and sustain her HEAD.)

### PRICE AND GOSNELL'S

PERFUMERY.—NOTICE.—Executors of the late John Gosnell v. Rees Price, Perfumer, 28, Lombard-street, trading under the firm of Price and Co., and previously under the assumed name of "Napoleon Price and Co." The Judges in the Court of Exchequer in this day decided in favour of the plaintiff in this case. The defendant, Rees Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr. John Gosnell (father of the parties now carrying on business under the firm of John Gosnell and Co., 12, Three King-court, Lombard-street), and bound himself, under forfeiture of £5,000, not to commence business within the Cities of London or Westminster, or within the distance of 600 miles from the same, and, notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract.—12, Three King-court, Lombard-street, Jan. 27, 1845.

CAUTION TO THE TRADE.

EVERETT'S PREMIER BLACKING.

WHEREAS an Injunction has been this day granted by the Vice-Chancellor of England, to restrain Samuel Allin and others from selling or disposing of any Blacking or Composition under the name of, or as, or for, or described as, or purporting to be the same Blacking as was made and sold by William Everett in his lifetime, and which is now manufactured solely by us, and sold under the name of EVERETT'S PREMIER BLACKING; all Parties are hereby cautioned against purchasing, selling, or exposing for sale any blacking having affixed thereto, labels in any way similar to those used by us, or any other labels of cards, so contrived or expressed as, by colourable imitations or otherwise, to represent the Blacking to be the same as the manufactured and sold by the late William Everett, and now manufactured only by us, as legal proceedings will be immediately taken against any person who, after this notice, shall in any way infringe on the terms of the said Injunction.

EVERETT and Co.,  
August 19th, 1845. 51, Fetter-lane, London  
Fide Times and Herald, 20th August, 1845. 7978

### BILE! BILE! BILE! — WORBOY'S

VEGETABLE PILLS safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual constiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½d., and 2s. 9d., each, by W. B. Worboye, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.

N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

### NO MEDICINE for the CURE of ASTHMA

and Consumption, Coughs, &c., was ever attended by speedy and unflinching success as DR. LOCOCK'S PULMONIC WAFERS. In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.

Cures of Spitting of Blood, Consumption, Coughs, &c. From Mr. J. S. Weir, Practical Chemist, 1, Lowgate, Hall. Sept. 5, 1846.

Gentlemen.—I feel a pleasure in communicating to you, some of the happy effects produced in this neighbourhood, by Locock's Wafers, of which my customers cannot speak in terms too high.

A female residing in this town, who broke a blood-vessel about six months ago, and who, since that period, has been afflicted with a severe constriction of the chest, accompanied with great pain, and difficulty of breathing; has experienced the most immediate and permanent benefit from this most valuable medicine.

A gentleman—also, of this town, who was pronounced by his medical attendants, to be in the second stage of consumption, has been so far relieved, as to be able to take out door exercise, which he had not been able to do for some time previously, and his friends are joyfully anticipating his complete recovery.

I have met with many other instances, in which, Coughs of from fifteen to twenty years standing, have yielded to its power; but I have not heard of one case in which great benefit has not been the result of a fair trial.

Its fame has extended so far, that yesterday I received an order to send some across the Channel to Antwerp. I am &c. J. S. WEIR.

DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

TO SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1½d., 2s. 9d., and 11s. per box: & sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

CAUTION.—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and improved edition of

### THE SILENT FRIEND; a Medical Work

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Sympoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and J. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 18, BARNES STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Haasway and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street, Soho, and all Booksellers.

Consultation free, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

LONDON.—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIFPLE.—Thursday, Nov. 20th, 1845.

# THE Sportsman's Magazine

Life in London

No. 29. FOR THE WEEK ENDING DECEMBER 6, 1845. THREE HALF-PENCE.

for a Sweepstakes—see Fitzwilliam. At Richmond, won easily the Dundas Stakes, all ages, dis mile and a quarter, 5st, beating Therstites, 2 yrs, 5st (second), b c by The Mole or Physician out of Venus, 3 yrs, 7st 5lb (a good third), Thalia, 2 yrs, 5st (fourth), Lucy, 3 yrs, 7st 10lb (fifth), and Mr. Mansfield, 2 yrs, 5st (sixth).—[Derby.]

OSPREY, ch f, by Birdcatcher out of Emily, by Pantaloon; Mr. Preston's—at the Curragh September Meeting, carrying 7lb over weight, ran second to Mermaid for the Anglesey Stakes, T.Y.C.; same meeting, carrying 8st 7lb, won the Filly Stakes in a canter, beating Amazon, 8st 7lb, T.Y.C.—[Oaks.]

MIST, THE, ch f, by Sir Hercules out of Ildegarda; Mr. Quin's—at the Curragh September Meeting, carrying 8st 3lb, ran third to General Tom Thumb, 8st 4lb, for a sweepstakes, T.Y.C.; same meeting, carrying 8st 4lb, was beaten by Erin-go-bragh, 8st 7lb, for the 100 sovs sweepstakes, T.Y.C.—[Oaks and Leger.]

CUCKOO, ch f, by Ellis out of Reel; Duke of Richmond's—At Goodwood, was a good second to Lady Cecilia for the Ham Stakes; at same place second for the Molecomb Stakes—see Sting in *Almanack*; won the Sussex Stakes (carrying 8st 4lb by a neck, beating Samphire, 8st 4lb (second), Camera Obscura, 8st 4lb (third), and brother to Valentissimo, 8st 12lb (fourth). At Newmarket FO, a bad second to Madcap for the Hopeful Stakes. At Newmarket SO, won the Bretby Stakes by a head, last three quarters of R.M., beating Polka (second), and Ennui (good third).—[Oaks.]

PRINCESS ALICE, br f, by Bay Middleton out of Her Majesty; Lord G. Bentinck's—At Bath, won the Weston Stakes by a head, distance half a mile, beating Astonishment (second), Madcap (bad third), Motilla (fourth), Q. E. D., and The Pretender. At Chester, won a Sweepstakes cleverly by a length, distance five furlongs, beating the Traverser (second), Curiosity (good third), Amelia, ch c by Stockport out of Manilla, Sotades, ch c by Hetman Platoff out of Miss Thomasina, Queen Mary, b f by Toryboy out of Miss Fitz, and Brutus. At Ascot, carrying 5lb extra; was not placed for the New Stakes—see Joy. At Liverpool, was a good second to Luminary for the Mersey Stakes. At Goodwood, was not placed for the Ham Stakes—see Lady Cecilia; same meeting won a 200 sovs Sweepstakes, T.Y.C., by a neck, beating Wilderness (second) b f by Ellis out of Tesone (bad third), br f by Retriever out of Emilia (fourth), and Malvoise (fifth). At Doncaster, won by a length the Champagne Stakes, Red House in, beating the Traverser (second), Iago (good third), br c by Don John out of Peri, Sheraton, Banata, ch f by Stockport out of Mountain Sylph's dam, Malcolm, Fair Star, Mr. Mansfield, The Free Lance, Prospect, and Kismet; not placed for the 20 sovs Stakes won by f by Velocipede out of Garland. At Newmarket S O, was a bad second for the Clearwell—see Sting; won the Prendergast Stakes, T.Y.C., by three lengths, beating Ennui (second), Wit's end (third), Paragon (fourth), and George the Fourth (fifth).—[Oaks.]

QUEEN ANNE, b f, by Slane out of Garcia; Colonel Peel's—At Newmarket won the July Stakes, new T.Y.C., by a length, beating Smuggler Bill (second), Titbit (third), b c by Emilius out of Messene, The Little Vulgar Boy, b c by Colwick out of Toga, Moonbeam, Trebonius, and Gusman.—[Oaks.]

GARLAND, f by Velocipede—br f (now called Vaniah) out of Garland; Sir C. Monk's—At Doncaster, won by a length, a sweepstakes, T.Y.C., beating ch f by Stockport out of Mountain Sylph's dam (second), Malt (a good third), Turpin, Princess Alice, The Free Lance, Fancyboy, Therates, br c by Retriever, dam by St. Patrick, Prospect, Fair Helen, br c by Don John out of Peri, sister to Devil-among-the-tailors, Tobaccoist, Punch, and bro to Millepede. At Chester A, won by a head the Grand Stand Stakes, dis 6 furlongs, beating Burlesque (second), br f by Tomboy out of Lapwing (a good third), Josephine (fourth), brother to Beaumont, ch c by Hetman Platoff out of Miss Thomasina and Sharpshooter.—[Oaks and Leger.]

#### THE IRISH DERBY AND OAKS LOTS.

DERBY, Humdrum, Hark-to-cover, Harkover, and Hokkano Barn. The Oaks, Danceaway, sister to Ballinkeele (Perdita filly), Foinnualla, Osprey, and the Mist (the Ildegarda filly).

#### A RETROSPECTIVE GLANCE OF THE TURF WINNINGS OF 1845.

The following calculations, of the winnings of the most fortunate owners of "high bred cattle" during the past season, may form an appropriate pendant to the methodical history of our excellent contributor, Soothsayer. Mr. A. W. Hill's Sweetmeat has won the greatest number of races of any animal during the year; viz., 18, value 3,730l. The Duke of Richmond's Refraction has won the greatest amount of stakes, 4,700l, including the Oaks. The Merry Monarch has won 3,975l. with the Derby. The Baron, with the Leger and the Cesarewitch, 3,395l. Sting, 3,380l. Princess Alice, 3,303l. Idaa, 2,925l. Miss Elis, 2,890l. Hersey, 2,600l. Joe Lovel, 2,400l. Inheritress, 2,255l. Lothario, 2,025l. Intrepid, 1,915l. Miss Sarah, 1,820l. Cowl, 1,750l. Winchelsea, 1,750l. Arkwright, 1,700l. Alarm, 1,740l. Lady Cecilia, 1,650l. Discord, 1,635l. Queen Mab, 1,555l. Pic Nic, 1,555l. Mantor, 1,420l. The Libel, 1,340l.

The following noblemen and gentlemen have been the largest winners during the past season:—

	RACES.	IN VALUE.
The Duke of Richmond has won	20	£10,880
Duke of Bedford	25	4,145
Duke of Rutland	12	990
Lord Exeter	20	5,555
Lord G. Bentinck	55	16,473
Lord Stanley	1	490
Lord Stradbroke	13	1,455
Lord Eglington	7	915
Lord Albemarle	4	1,440
Lord Chesterfield	16	4,640
Lord Lonsdale	4	1,675
Lord Zetland	4	1,460
Lord Warwick	9	1,165
Lord Verulam	2	435
Lord Glasgow	3	800
Hon. G. Ongeley	6	1,275
Lord E. Russell	2	1,600
Col. Peel	18	5,745
Col. Anson	3	2,800
Mr. Gratwicke	2	5,625
Mr. A. W. Hill	25	5,545
Mr. Meiklam	28	4,720
Mr. G. Watts	2	3,395
Mr. G. Payne	12	2,595
Sir C. Mouck	9	2,225
Mr. Gully	4	2,090
Mr. S. Wreford	9	2,980
Mr. Greville	5	2,030
Mr. Skerratt	4	1,984
Mr. W. H. Johnstone	15	1,890
Major Yarbrough	3	1,820
Mr. S. Wreford, jun.	3	1,750
Mr. Osbaldeston (the "ould" squire)	5	935

The Goodwood stable have thrown in for a good sum, "the Duke" winning 20 races out of 55; and Lord George, justly styled the "Napoleon of the Turf," 55 races out of 175 starters. Mr. Gully, the Squire, Mr. Irwin, and Col. Anson, have not been so fortunate. The season, from the cocktail Intrepid carrying off the Chester Cup to the defeat of The Baron in the Cambridgeshire, has gone off with one continued *eclat*, and augurs a splendid opening for 1846.

#### A Table of the Running of the Two Year Olds, in 1845.

During the past season no less than 216 young-uns have made their debuts in public life. Of these 116 were colts and 100 fillies. The following table exhibits their descents and performances, classified under the names of their respective sires:—

Sire.	Produce.	Started.	Won.	Sire.	Produce.	Started.	Won.
Accident	1	1	1	Marcian	2	3	1
Albemarle	1	1	1	Marvel	1	5	1
Amato	1	4	1	Montreal	7	16	1
Bard	5	18	7	Muley Moloch	2	3	1
Bay Middleton	8	38	14	Mus	1	1	1
Beiram	1	1	1	Nonsense	1	1	1
Bentley	1	1	1	Pantaloon	4	7	1
Bran	1	1	1	Phoenix	3	4	1
Bretley	1	2	1	Plenipotentiary	1	1	1
Cesar	3	8	1	Quid	1	3	1
Cain	2	5	1	Record	1	1	1
Camel	8	14	3	Recovery	3	19	4
Chesterfield	1	2	1	Redshanks	2	7	4
Clearwell	1	2	1	Retriever	2	5	1
Commadore	1	1	1	Revolution	2	3	1
Confederate	1	3	1	Rococo	2	5	1
Colwick	2	7	1	St. Martin	2	3	1
Coronation	1	2	1	Saddler	11	25	3
Defence	4	14	2	Sheet Anchor	5	18	9
Discord	1	1	1	Sir Hercules	5	8	1
Doctor	3	7	4	Sir Isaac	1	1	1
Don John	5	13	4	Slane	5	12	7
Dulcimer	1	1	1	Steamer	1	1	1
Elis	9	23	6	Stockport	10	37	4
Emilius	6	11	1	Talleyrand	1	2	1
Epirus	2	3	1	Taurus	1	4	1
Euclid	3	5	2	The Hydra	1	5	1
Gilbert Gurney	1	2	1	Theon	2	5	1
Gladiator	2	5	1	Tomboy	4	14	4
Glaucus	1	1	1	Toryboy	2	3	1
Hampton	2	7	1	Touchstone	4	9	3
Hetman Platoff	10	22	1	Velocipede	5	11	3
Inheritor	4	13	1	Venison	7	23	3
Jereed	2	6	1	Verulam	1	6	1
King Cole	1	1	1	Voltaire	3	8	1
Launcelot	1	2	1	William IV	1	5	2
Liverpool	3	10	4	Wintonian	1	2	1
Lord Stafford	1	5	1				

## BRITISH BIRDS NO. XXII.

THE REEVE.

**T**HE quaker clad lady of the gaily ruffed lover figured in No. 28, forms the subject of this week's specimen of the feathered tribes. As some of our correspondents have asked at our hands a few wrinkles about coast gunning, and the visitants of our shores at this inclement season, we will give them a picture or two of the aquatic genera in due succession. For the present we resume the mode of taking RUFFS and REEVES at the point where we broke off last week.

The net is what is termed a single clap-net, about seventeen feet in length, and six wide, with a pole at each end; this, by means of uprights fixed in the ground, and each furnished with a pulley, is easily pulled over the birds within reach, and rarely fails taking all within its grasp; but in order to give the pull the greater velocity, the net is (if circumstances will permit) placed so as to fold over with the wind; however, there are some fowlers who prefer pulling it against the wind for plovers. As the ruffs feed chiefly by night, they repair to their frequented hill at the dawn of day, nearly all at the same time, and the fowler makes his first pull according to circumstances, takes out his birds, and prepares for the stragglers who traverse the fens, and who have no adopted hill; these are caught singly, being enticed by the stuffed birds.

Burton, who was before mentioned, never used anything but stuffed skins, executed in a very rude manner; but some fowlers keep the first ruffs they catch as decoy birds; these have a string of about two feet long tied above the knee, and fastened down to the ground. The stuffed skins are sometimes so managed as to be moveable by means of a long string, so that a jerk represents a jump, (a motion very common among ruffs, who at the sight of a wanderer coming by, will leap or flit a yard off the ground,) by that means inducing those on the wing to come and alight by him.

The stuffed birds are prepared by filling the skin with a wisp of straw tied together, the legs having been first cut off, and the skin afterwards sewed along the breast and belly, but with no great attention to cover the straw beneath: into this straw a stick is thrust, to fix it into the ground, and a peg is also thrust through the top of the head, and down the neck, and into the stuffing or straw body, and the wings are pinned down by the same process. Rough as this preparation is, and as unlike a living bird as skin and feathers can be made, it answers the same purpose.

When the reeves begin to lay, both these and the ruffs are least shy, and so easily caught, that a fowler assured us he could with certainty take every bird on the fen in the season. The females continue this boldness, and their temerity increases as they become broody; on the contrary, we found the males at that time could not be approached within the distance of musket shot, and consequently were far beyond the reach of small shot.

We were astonished to observe the property that these fowlers have acquired, of distinguishing so small an object as a ruff at such an immense distance, which, among a number of tufts or mounds, could not by us be distinguished from one of those inequalities; but their eyes had been in long practice of looking for the one object.

The autumnal catching is, usually about Michaelmas, at which time few old males are taken, from which an opinion has been formed that they migrate before the females and young. It is, however, more probable, that the few which are left after the spring fowling, like other polygamous birds, keep in parties separate from the female and her brood till the return of spring. That some old ruffs are occasionally taken in the autumnal fowling we have the assertion of experienced fowlers, but we must admit that others declare none are taken at that season. It must, however, be recollected, that in the autumn the

characteristic long feathers have been discharged, and consequently young and old males have equally their plain dress; but the person who assured us that old birds were sometimes taken at that season, declared it was easy to distinguish them from the young of that summer.

It does not appear to be the opinion of fowlers, that the males are more than one season arriving at maturity, because the ruffs taken in the spring, destitute of the characteristic long feathers, which constitute their principal distinction, are comparatively few to those possessing the ruff; the opinion, therefore, that those ruffless males are birds of a very late brood of the preceding season, is a reasonable conjecture.

The long feathers on the neck and sides of the head, in the male, that constitute the ruff and auricles, are of short duration, for they are scarcely completed in the month of May, and begin to fall the latter end of June. The change of these singular parts is accompanied by a complete change of plumage; the stronger colours, such as purple, chestnut, and some others, vanish at the same time, so that in their winter dress they become more generally alike from being less varied in plumage; but we observed that those which had the ruff more or less white, retained that colour about the neck after the summer or autumnal moulting was effected.

The females, or reeves, begin laying their eggs the first or second week in May; and we have found their nests with young as early as the third of June. By this time the males cease to hill.

The nest is usually formed upon a tump in the most swampy places, surrounded by coarse grass, of which it is also formed.

The eggs are (as usual with its congeners) four in number; these are so nearly similar in size and colour to those of the snipe and redshank, both of which breed in the same wet places, and make similar nests, that some experience is required to discriminate them; they are, however, superior in size to the former, and are known from the latter by the greenish hue, instead of a rufous white; but individuals assimilate so nearly to each other, as not to be distinguished, especially as the dusky and brown spots and blotches are similar. The weight of the eggs is from five drachms twenty-five grains, to five drachms fifty grains.

## CORRESPONDENCE.

## ON CHARGING AND TRYING GUNS.

Sir,—I beg leave to offer a few observations, if you deem them worthy of insertion they are at your service.

With regard to the size of the gun, if the sportsman intends to confine himself to the use of one only throughout the season, gauge 14 is to be preferred, weighing (supposing a double) 7½lb. If single, 12 gauge, weight 6½lb. If, however, the shooter be not athletic, or resolves on using two guns, I would recommend, for the early part of the season, 18 gauge, as a trifling difference in weight will be found very agreeable; indeed a great relief, during the heats of August and September; therefore, a double gun, of the bore or calibre just mentioned, should weigh 6½lb.; of a single 6lb. In this case, the 14 gauge should not be used till, with cool weather, the birds have become wild. I am well aware that there are sportsmen who object to so narrow a bore, as soon becoming foul, and thus rendering its shooting or use objectionable; but such as have imbibed this notion are unacquainted with the patent wire cartridge, which completely sweeps the barrel every time it is placed over the powder, and keeps it free from lead and all internal foulness.

It is a well ascertained fact, that the shot of the patent cartridge is propelled or driven with such superior force, compared to the loose charge as to render No. 7 in the first case more than equal to No. 6 in the second. There are about the same number of pellets in 1oz. of No. 7 as in 1½oz. of No. 6: and consequently the former would become a very eligible substitute for the latter.

With a 14 gauge 1½oz. of No. 6 shot, and from 2½ to 3 drams of powder will be found the most effective charge for the early part of the season: the same weights as above, but with shot No. 5 or 4, as the birds gain strength on the wing and become difficult of approach. I am well aware many will object to the proportions just mentioned, as containing too much powder and not enough shot; and who would prefer 1½oz. of shot and 2 drams of powder. That at the distance of 40 yards a greater number of pellets would be thrown into a sheet of paper with the latter, I entertain not the least doubt; but then the shot is not driven with sufficient force to kill at long distances, and all sportsmen will admit that many wounded birds get away owing to not being hit hard enough. The 18 gauge should have 1oz. of shot (a cartridge for the reasons already given being preferable) and 2½ drams of powder.

To those who are used to it, an iron target brushed over with white wash saves both time and expense, but the force of the discharge cannot be so accurately ascertained by this method, as by shooting at 24 sheets of paper, stretched open, and nailed to a square wooden frame made to the size of the sheet. At each discharge, the first and last sheets should be removed and others substituted; by which it will be clearly perceived how many pellets struck the first sheet, and the number which perforated the whole. A good 14 gauge gun, with the charge I have described, should, at forty yards, average 70 pellets through the first sheet, and 30

at least through the whole. The paper to be 22 inches by 30, weighing 3lb. the quire. A 12 gauge, with 1½oz. shot, and 3½ drams of powder should throw 90 into the first sheet, and driving 40 through the whole quire; an 18 gauge, 50 in the first sheet, and 15 or 20 through. A gun which will accomplish this must be considered unobjectionable; and when any person is heard to boast (which is not unfrequently the case) that he possesses a gun that will do much more, he should be suspected of a little romance, and may be safely invited to the trial under the following indispensable precaution: First, that the paper is perfectly dry, and of the specified size and weight. Secondly, that the portions of powder and shot are quite correct—an impartial person loading the gun. Thirdly, that no holes are discernable *a priori* in the paper. Fourthly, that the distance be ascertained by measurement, and not settled by the fallacious mode of stepping. The use of a rest is advisable, as the most trifling swerve will prevent an accurate result.

The percussion tube is supposed to fire quicker than the copper-cap, and certainly is not so liable to be stopped; but guns thus fitted for discharge require much more care and cleanliness, and are not on the whole so simple, though still preferred by some shooters. I prefer the copper-cap most decisively; and as I conceive the question lies between these two, it is useless to bring any other plan under the observation of the reader. There is a safety trigger which acts remarkably well, invented, I believe, by Purdy—at least it bears his name; it is so contrived as to be touched and involuntarily drawn up by the right hand, when the gun is at the shoulder, so that it requires no consideration at the time, yet when the butt of the gun is placed on the ground, it cannot be moved even should it be on full cock. These are many good kinds of wadding the best is made of thick felt; but it has been regarded as objectionable on account of its bulk. There is another made of thinner felt, pasted between two pieces of paper, and containing a small portion of grease, which exudes upon firing the gun, thus keeping the barrel clean. Other varieties of wadding are to be met with; but I have not yet been able to discover the great difference in the effect of wadding for which some persons strenuously contend: however, I hesitate not to state my unqualified conviction of the superiority of a punched wadding (containing substance) over thin card: paper I regard as utterly exploded. The patent wire cartridge is an excellent contrivance for shooting at long distances; but I must leave to the patentees the task of proving that it will accomplish what they confidently assert. Originally those cartridges were objectionable in a way that could not fail to prevent their general use; their action was irregular, and they were apt to be driven together, in the form of a ball. However, they have lately undergone considerable improvement, and those with which I have tried a few experiments gave me unqualified satisfaction. In loading, those cartridges are very convenient; and I have certainly seen very long shots killed with them. I would recommend sportsmen always to carry a cartridge in their second barrel. In the early part of the season (for partridge shooting particularly) their use the first barrel is a matter of taste.—I cannot pretend to name a powder which is preferable to every other; yet I observe that which is granulated larger than formerly is in much request. Caps made of thick metal are to be preferred; those of French manufacture carefully avoided.

#### A FEW HINTS UPON FOX-HUNTING.

Sir,—I send you a few hints in consequence of the disregard frequently paid by those who profess to follow the chase, but who more frequently are larking, and only thinking who shall get over the fence first, without much minding whether they are after the hounds or before them. It is not my wish to restrain the ardour of the young aspirants for fame in the field, but only to point out to them when they may exert their full powers, without detriment to that sport, which, I presume, it is their wish to enjoy. Imagine a fox well found in a favourite cover, and, of course, all anxious for a start; the master of the hounds excuses at first a little haste and ardour in the field, and after one or two admonitions to "hold hard!" the hounds settle, and seem determined on mischief, and all goes well; but after fifteen minutes at a good pace, difficulties arise; there is a check; and now it is that the temper of the master of the hounds and huntsmen are tried. Instead of every person in the field pulling up, to allow a cast to be made, (supposing the check to arise from sheep, shooters, cur dog, difficult ground, &c. &c.) may begin talking aloud, striking fire to singe cigars, or what is worse, just as the hounds put their heads down to cry "hark halloo!" perhaps to some boy, who unluckily at that moment is doing his duty, by exerting his lungs to the utmost in defending his master's late sown wheat. To prevent this unsportsman-like conduct, allow me to request the attention of your fox-hunting readers, more particularly of the younger ones, to the following remarks, which are committed to paper purely from a desire to promote the science of fox-hunting, for it is an inattention to the science that is the chief cause of the mischief that is done in the field.

While the cover is being drawn, keep away from all the points that the fox is most likely to break at, if he does not go away when first found; if the cover is a small one, remain stationary; if a large one, great attention is necessary to avoid heading the fox, and at the same time not losing a start; keep down wind of the hounds, and as near them as the situations

of the ridings will admit, turning as they turn, which will take less out of your horse than getting badly away, and having to race to catch them. Allow hounds a fair start; when settled, keep your eye forward, and if you see any probable impediment to the straight course of the fox, such as shooters, men ploughing, hedgers, a road, &c. &c., pull to your horse, caution others to do so; and by that means, should the hounds come to a check, they will have room to make their own cast; and should that fail, the huntsman will know where to make his. Never when running down a road or lane ride within thirty yards of the hounds, for if pressed at that time they are apt to go beyond the scent, and of course a long check ensues; when you first hear an halloo, only listen, do not immediately shout "hark halloo!" which prevents the men working with the hounds from hearing it distinctly, which is of much importance, as they from experience can generally decide whether it is a false halloo or not. When the fox gains a cover, do not ride round to view him away, as by so doing you most likely will head him, or if he is before you, bring the hounds to a check. When they are hunting slowly, and particularly with a beaten fox, it is wrong to go forward up the ridings of the cover which the hounds are pointing for, as the fox will most likely run them. Never allow your spirits to be too much elated when a fox is sinking, as often when you think the hounds cannot miss him, by a few injudicious cheers, you get their heads up, the fox slips through a farmyard, round the corner of a cottage, is run by a cur, confusion ensues, and you are all astonishment how he could be lost. When a fox is killed, be careful to keep your horse away from the hounds, when worrying him, as at that time the quietest horses will kick hounds.

There are many more circumstances that occur during a run that are of great importance, but a knowledge of which can only be acquired by a due attention to the science of hunting.

Masters of hounds often complain of their puppies being sent in from quarters long before the regular time,—which is in April, as soon as hunting is over; those who are kind enough to keep them, would not send them in so soon, if they were aware of the inconvenience it causes in the kennel, and the injury it does to the shape and make of the young hounds, by being in kennel from the time they are sent in till the hunting season is over, as before that period proper attention cannot be paid to them.

Nimrod has written some excellent "Maxims on Hunting with Harriers." I therefore forbear to scribble on a subject almost exhausted by his able pen.

AN OLD SPORTSMAN.

[We will print Nimrod's maxims in a week or two, they may be serviceable and amusing to some who have not read or do not possess his works.—ED. SP. MAG.]

#### THE MAMMOTH HORSE.

N the brief notice we gave of this equine prodigy (in which we regret [to say, owing to the non-revision of the proof sheet some vile typographical errors were perpetrated]) the following dimensions, from actual measurement, were omitted:—Height, 20 hands, girth, 8 feet 6 inches; length from chest to hind-quarters, 6 feet 5 inches; dividing the body into three parts, from point of shoulder in a horizontal line behind the scapula, 2ft.; the body, from the said line to a perpendicular line with hip, 2 feet 5 inches; the hind-quarter, from the horizontal line, with the hip to the extremity of the buttock, 2 feet; depth of shoulder, from the top of the withers, obliquely, to the point of the shoulder, 3 feet; width of chest, 2 feet 4 inches; length of arm, from the elbow joint to the extremity of the knee joint, 2 feet; length of cannon, from the knee joint to the fetlock joint 11 inches; perpendicular length of the pastern, from the fetlock to the ground, 8 inches; oblique length, 10 inches; hoof in front, 5 inches; hoof to fetlock, 5 inches; width round the elbow, 14 inches; round the arm, one-third-below the elbow, 2 feet; round the knee, 17 inches; round the cannon, 11 inches; width across in the loins, from hip joint to hip joint, 2 feet 4 inches; length from hip joint to hook, 4 feet 4 inches; length from hook to fetlock joint, 13 inches; length of pastern, obliquely measured from toe to joint, 10 inches; round the muscular part of the thigh, by the stifles, 4 feet 3 inches; round the gaskin 2 feet; round the hook, 21 inches; round the head, from occiput to occiput, 2 feet 4 inches; across the frontis to ditto, 10½ inches; round the noseband, 2 feet 2 inches; round the head from the ear, measured across the orbit and under the posterior jaw, 3 feet 8½ inches; depth of collar, 2 feet 8 inches.

The horse is extremely tractable, performs a variety of amusing tricks, and with trifling tuition would become a splendid "trick horse" for the circus of an amphitheatre. He is so docile that he will eat corn out of ladies' hands, and take cakes and apples from children. He is exhibited by Mr. Carter, himself who appears to be a greater "lion" than even the horse, and who is continually questioned by the company as to the *modus operandi* he adopted in subduing the "monarch of the forest," and the other wild animals in his menagerie. Previous to the "general" coming into the possession of Mr. Carter, he was shown to his Royal Highness Prince Albert, and several noblemen and gentlemen, who declare him to be the largest and finest horse they had ever beheld, particularly admiring his fine action and noble bearing.

## CORRESPONDENTS.

To half a dozen "CONSTANT READERS."—Perhaps you will each write again just to tell us how to distinguish you. It so happens that three or four of you having been put on "file" for answer, your envelopes have gone into the waste-paper basket, so that there is not even a postmark to identify you by. Worthy, excellent and CONSTANT Readers, do you ever read our paper at all? If you don't you won't see this: if you do pray pass the alphabet into your service and choose initials with the name of a town or place appended; and again if you do not address your letters to "the Editor," how can you expect them to reach his hands? Our publisher, Mr. Dipple, has just given us two or three open ones from among numerous orders, invoices, &c., which have been lying by a week. All in-CONSTANT-READERS, who will misdirect their letters, and stick to that undistinctive signature, will in future be left totally unnoticed. To one who has put OLDHAM at the corner of his epistle, we reply. You have not stated the nature of the injury to the dog: was it by bruise, strain, or wound? We presume there is no fracture or dislocation of the limb; if there be it is idle to hope for a cure, until the fracture or dislocation is reduced. If it be a mere strain, time will restore it, but it may be hastened and nature assisted by the following treatment:—First give him a gentle purgative, rhubarb and jalap mixed as much as will lie on a shilling, then apply a cold poultice, linseed cake and bran (if there be any inflammation); the next day remove the old poultice, give another dose of medicine (or omit it till next day but one) according to state of bowels. Then apply camphorated soap liniment well rubbed in, and afterwards bandage the limb. Keep the dog in his kennel, or from moving about much.

R. S. T.—As the list is short we give it. The following are the

## WINNERS OF THE CAMBRIDGE STAKES.

Year.	Winners.	Subs.	Started.	Value.	
1839.	Lancroft.....	55	(21 declared).....	12	£700
1840.	Roscius.....	64	(35 declared).....	18	725
1841.	Vulcan.....	82	(50 declared).....	23	1090
1842.	Ralph.....	88	(54 declared).....	18	1055
1843.	Nat.....	95	(46 declared).....	23	1140
1844.	Evenus.....	123	(48 declared).....	19	1350
1845.	Alarm.....	121	(43 declared).....	26	1490

A GIBBENS, Wileston Green.—If I put down a one at Cribbage; my partner puts down a two; I put down a three; my partner puts down a four; this makes a single run; then if I put down a four, will that make a double run?—Certainly not.

A GREENHOORN.—A had no right to "call," as he and his partner could not count honours, at nine. It was an indirect mode of ascertaining his partner's strength in trumps, therefore C was right in calling a new deal, and in retaining it. No intimations between partners are allowable, except a legitimate call of "can you one?" when honours can be properly counted.

A. W. C.—We will give the suggestion our best consideration, and may possibly act on it.

JAMES D.—N.—Our correspondent inquires—"Did Master Henry and Anti-Radical run a match against each other or not? 2. Was the great match for a thousand guineas run by Anti-Radical or Hubbersty against Master Henry? 3. Was not Lichfield the scene of action? As there are several bets depending on your answer to the above questions, I hope you will oblige me by so doing. One general answer will solve the three questions of one correspondent. Mr. L. Charlton's f. h. Master Harry, by Orville, 6 yrs old, 8st 10lb, beat Mr. Mytton's b. g. Anti-Radical, by Marmion, 3 yrs old, 8st 1lb, four miles, 500 gns. Even betting, and 5 to 4 on Master Harry. Run at Lichfield, Tuesday, Sept. 11, 1821.

TEASLE, Dudley.—We are obliged for your offer, but possess the volumes.

G. AUSTIN, Jun.—Yes; you will find it in number 27, page 441. It was not deserving of a detailed report.

T. ROWE, Newcastle.—We cannot tell you when Merryman and Maley will settle their long-standing difference: we don't believe the men themselves know. Sam Merryman has fought twenty times. He has been beaten five times; 1, by Bill Atkinson (in 1826); 2, by George Truman, (an accident, Sam broke his arm); 3, by Tom Cox; 4, by Bill Atkinson, second time, Nov. 2, 1837; 5, by Tom Maley, June 23, 1840.

INQUISITIVE.—Richmond the black chest Carter (who claimed the Championship) in 1818. It was a room fight; Richmond was 56 years of age. He died in Tichbourne-street, Haymarket, in 1839, aged 66.

SAWNEY.—If a filly wins the Derby, is extra weight put on her for the Oaks?—No.

FAIR PLAY (Mooley).—The performance of 1,000 miles in 1,000 hours by Sutton, the Kentish pedestrian, seems to us well authenticated. The pedestrian, William Seerles, whose execution of the Barclay Match was recorded in the *Illustrated London News*, accompanied by a portrait, some twelve months since, we can give no opinion about; that picture-sheet is anything but a sporting authority. For Captain Barclay's performance, see our 24th Number, page 416. With the opinions of the gentleman who, in another journal, has already replied to "Fair Play's" question, we have nothing to do. What has been performed may remain to be done.

FROM SHOOTING.—A bird wounded and falling, but getting up and flying out of bounds, is not a "dead bird," and cannot be claimed.

## OUR WEEKLY CALENDAR.

SUNDAY, Nov. 30th.—ADVENT SUNDAY.

MONDAY, December 1st.—Report of the daily papers being raised to sixpence, 1844. The *Herald* avers to going the entire animal, resolves to go *half the hog*; i. e. sixpence.

TUESDAY, 2nd.—North Berwick and Dirlston Coursing Meeting.—Mr. Scott rode from London to Cheltenham, in 6 hours, 1816.—Napoleon crowned, 1804.—Battle of Austerlitz, 1805.

WEDNESDAY, 3rd.—Spiddal Coursing Meeting, (and 4th).—James II. abdicated, 1689.

THURSDAY, 4th.—Morpeth Coursing Meeting, (and 5th).—Ridgway (Southport) Coursing Meeting.

FRIDAY, 5th.—Ridgway Coursing Meeting.—Marshal Ney shot, 1815.

SATURDAY, 6th.—Algernon Sidney beheaded.—*Venus for the Month.*—Gardening.—Stir fire, set tea things, plant feet on fender, and cultivate as much social chat as weather will allow. Forage out fannel and let your Welch hose be well chose for winter wear. Stir stumps for country dances, and wind up spinning Jemies on Scotch reels. Transplant holly to mantel-piece and take kisses from under mistletoe. Put every thing in order for next year, and begin first by ordering "The Sportsman's Magazine" weekly. So shall social people ring the old year out with their Christmas bells and welcome the new one in with joy and gladness.—*Notes of a Naturalist.*—On boxing nights clowns begin to sing, and small urchins are met with in crowded galleries. The cold weather will make people put their hands in their pockets, and claimants for Christmas-boxes will make them pull out again to some purpose. The close of the year suggests innumerable reflections, but as we have now come to our own close—with reference only to the month, being our left-off close—the reader can manufacture them for himself, which is the best reflection we can make under the circumstances.

## The Sportsman's Magazine.

## A FEW WORDS ABOUT THE RING.

ANXIOUS to place the subscribers to the SPORTSMAN'S MAGAZINE in as good a position as to information upon the most prominent and generally interesting sporting events, we had made such arrangements as we hoped would, in every instance, secure to this publication the earliest and most accurate reports. We need scarcely observe that this involves considerable expense and labour both mental and bodily. With this view, for the stamped edition of this week, we repaired to Daventry. the intended battle-field of Gill and Norley, but were again doomed to disappointment.

Since the recent blow which the reputation of the Ring received in the affair of the Championship, followed by the unsatisfactory business of Jordan and Fox, and half a dozen of others, every precaution should naturally be expected. But no; as will be seen in another part of our paper (stamped edition) the contrary was the case. A few more such blanks, and the better sort of patrons of the ring will give up going to see fights at all, and the fall of the ring will be owing to its own members. The rumours and "says" upon the subject will be found under the head of "SPORTING INTELLIGENCE."

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 446.)

Leaving Manchester behind, my next attempt will be to place the Meeting at Eglinton Park, May 13, before your readers. As, however, it is confined, with a few exceptions, to contests in which "gentlemen riders" figure, and as it has no very direct bearing upon racing in general, I shall content myself with a short description. Aristides (Major Campbell) won the Irvine Cup, beating Dog Billy (Mr. H. Johnstone), Godfrey (Capt. Williams), and two others. Lord Waterford rode his Firefly for the Ayton Stakes, and was a winner. There was a race for 2 years old, which was won by the colt by Don John out of Peri (half mile), beating Sweetheart and Andrew Brandy. In a subsequent race Godfrey (Capt. Williams) beat Aristides (Major Campbell) and Dog Billy.

At Shiffhall, May 16, Intrepid won the Gold Cup, beating Salopian.

At Stokeley, May 19, a mare, Netherton Maid, won all her races.

GORHAMBY RACES attracted a considerable crowd, and the sport was very good. The only two events of importance were the race, by which it would be ascertained what was the real worth of Fitzallan, and that wherein Maynooth would have his claims as a Derby horse tested. It is with sincere regret I here mention the decease of the late excellent proprietor of Gorchambury Park, Lord Verulam. For the Craven Stakes, Satyr beat Moonshine and Mystery. In the Gorchambury Handicap, won by Queen of Tyne, Fitzallan did not get a place, and was accordingly out of favour altogether. For the 20 sovs. stakes, Maynooth beat Velox, but on a subsequent day was beaten by Crim Con and Sir Francis, and was therefore three or four points worse for the Derby. There was a very pretty race for the Selling Stakes between Best Bower and Jew Boy, the former by a spring in the last stride (Nat on him), winning by a "head." Tugnet won the Park Stakes (2 years old), beating Buttress, a filly by Muley Moloch, Fitzallan, Anna Bullen, and Deer; a bad lot, with the exception of Buttress. The Devil-among-the-Tailors was beaten here in two races, and has been upon the average very much out this year. Scarmentado was a winner in a poor race of 10 sovs. each.

At SHREWSBURY, May 21, Sweetmeat won two races, and walked over for two others, shewing himself a better horse than Salopian, Milton, Inheritress, Master Stepney, and another or two. Cour-de-Lion won the Queen's Plate, and Aurungzebe, the Borough Members'. The Hawkstone Cup fell to Inheritress, who beat Coranna and Salopian.

At EDINBURGH, May 22, Pythia was very successful.

Your readers will I trust give me credit for an honesty of purpose, and a desire to please in relating from memory's tablet the by-gone occurrences of the racing season; but, at the same time I cannot but feel that in approaching the Derby, something is due to them by way of explanation. I beg therefore to state, that I do so with a perfect sense of my incapacity to picture so celebrated a scene, or to give a decided opinion upon such an important event. The scene has been described already by that eminent recorder of the turf 'Nimrod,' in a manner that leaves nothing to be wished, and does not require to be repeated; the event has received all that 'Pegasus,' 'Vates,' 'Bunbury,' 'et id genus omne,' could bring to bear upon it. I shall therefore give my reminiscences in as concise a manner as possible.

EPSOM RACES, May 27, opened with the defeat of Evenus, for the Craven Stakes, won by the Knight of the Whistle, Pagan, second; the

Attorney, third. Cherokee, won the Woodcote Stakes for two-years-old, beating a tolerable field, including Hero, Lord Harry, and Malt. The Manor Stakes showed Montgomerie in a bad place, and John Davis in a good one. On Wednesday, May 28, the race for the Derby Stakes came off in tolerable weather; for this race thirty-one I believe started, and they may be thus classed. First Class—Old England, Weatherbit, Annandale, The Libel, Idas, Pantasa, and Alarm. Second Class—Merry Monarch, Doleful, Wood Pigeon, Worthless, Mentor, Kedger, and Maynooth, and perhaps Fuzbes, Pam, and John Davis. Third Class, or, as good as out of the race, Jing'epot, Laird o' Cockpen, Cobweb Colt, Columbus, Salopian, Gwalior, Desperation, Cabin Boy, Adonis, Clear-the-way, Young Eclipse, The Black Prince, and Little Jack. After three false attempts, and a serious confusion, including an accident to Alarm during which many of the horses were much tried they got away Idas leading, but he soon gave it up, and Kedger and Doleful went in front. The pace getting better, Idas was gradually joined and passed by Pantasa and the Merry Monarch, Wood Pigeon, Mentor, Pam, Old England, and Annandale. In coming round the turn Pam fell, owing, as it is said, to Weatherbit, who was now making his way, striking his heels. They came on in this way, that is, Doleful and Kedger leading and the others above described close up, Idas evidently tiring, to the distance where Merry Monarch went in front, Annandale next, Pantasa third. Old England, Doleful Kedger and Wood Pigeon not far behind: Merry Monarch then went in and won; Annandale second, Old England, who passed Pantasa, third and Pantasa fourth. Wood Pigeon, Kedger and Doleful had better places than Idas, and the rest were beaten off, including the Libel who was last. I shall merely add that the Race was anything but satisfactory to judges in those matters. Of the Epsom stakes there is little to be said, but, I hope the motto "Live and let Live" will long find an echo in the human breast. Phylis beat Moonshine for the Walton Stakes, and was claimed. On May 29th. the Cup was won by Croton Oil. On May 30th, the Race for the Oaks Stakes brought twenty-one to the post, and the favourites had the shine most effectually taken out of them by Reflexion. She was a very clever winner at two years old and had always shown speed; how she came to be at twenty to one I leave the "professionals" to determine. Hope was second; Miss Sarah third, and Lady Wildair fourth. Miss Elis was left behind, as was Lancashire Witch. Wreck won the Members' Plate and Live-and-let-Live the Derby and Oaks of five each. My next communication will include Ascot Heath and Hampton; and, perhaps, Newcastle.

**GAME.**—That game may be injurious to the farmer, cannot be denied; but that a much greater outcry is raised concerning it than a deliberate investigation would justify, is equally incontestible; nor have I the least hesitation in now asserting that partridges, however numerous they may be, will be found beneficial rather than injurious to the cultivator of the land. In the first place, let us inquire what constitutes the food of these beautiful birds. Why, ants' eggs, insects of all kinds, and occasionally a few blades of grass, the last taken medicinally as it were, in the same way as we see blades of grass swallowed by domestic poultry. Young partridges never touch grain till they have nearly attained maturity—till, in fact, the arrival of autumn, when their supply of insect food failing, they pick up the grains scattered amongst the stubbles. Observations somewhat similar may be applied to the pheasant, with this difference, however, that these birds will scratch up the newly-sown wheat, if not prevented, which may be regarded as the extent of their depredations.—*Sportsman and Veterinary Recorder.*

**CUTTING IT SHORT.**—Henry the Fourth of France, when on a journey, was one day harangued by the mayor of the town, who began with these words: "Sire, when the great Scipio arrived before Carthage—" The king, who foresaw by this introduction that it would be a long and tedious speech, and being desirous of making the functionary sensible of his opinion, interrupted him, saying "Sir, when Scipio arrived before Carthage, he had dined, but I have not yet breakfasted."

**A STRANGE RACE.**—An American paper says, that a correspondence is now going on between two gentlemen of Boston, which began ten years ago with a challenge. Mr. A., a bachelor, challenged Mr. B., a married man, with one child, who replied that the conditions were not equal, that he must necessarily be at more risk with his life than the other, and he declined. A year afterwards he received another challenge, from Mr. A., who stated that he too now had a wife and a child, and he supposed, therefore, the objection of Mr. B. no longer valid, Mr. B. replied that he had now two children; consequently, the inequality still subsisted. The next year Mr. A. renewed his challenge having now two children also, but his adversary had three. This matter, when last heard of, was still going on numbers being six to seven, and the challenge being yearly renewed.

**UNLUCKY NUMBERS.**—Some people, it is said, have an objection to thirteen at dinner. Dr. Kitchener happened to be one of a company of that number at Dr. Henderson's, and on its being remarked, and pronounced unlucky, he said, "I admit it is unlucky in one case." "What case is that, doctor?" "When there is only dinner for twelve."

## NATURAL HISTORY OF SPORTING.

THE GREY SQUIRREL.

**R**Esume the subject of the squirrel from last week, giving an engraving of the common grey squirrel.

The more uncommon foreign varieties do not fall within our scope. They are the flying squirrels and the ground squirrels.

The flying squirrels are conspicuous for the rapidity of their evolution: they ascend the trees with such velocity that the eye can scarcely follow them; and they skim from one tree to another, or precipitate themselves to the ground with singular agility. In their habits they are nocturnal.

These elegant animals are respectively natives of the northern regions of Europe, the North of Asia, the north of America, and the glowing islands of the Indian Archipelago. The American flying squirrels are found on the Rocky Mountains, where it lives in dense pine-forests, seldom venturing from its retreat except in the night.

Its general colour is yellowish-brown above. The tail is flat, longer than the body, and blackish grey.

Unlike the tree squirrels, the ground-squirrels are chiefly terrestrial in their habits, and are furnished with cheek-pouches, in which they carry food to their retreats, forming magazines for winter. They live in burrows, but do not appear to become torpid. Their fur is shorter and closer, and the tail less bushy than in their arboreal relatives. These animals are chiefly spread through the northern and temperate regions of Europe, Asia, and America. The palm squirrel of India, and the Barbary squirrel, though associated by some authors with the ground-squirrels, occupy an intermediate situation between the latter and the true arboreal species.

The common ground-squirrel is a native of the north-eastern part of Europe and the north of Asia. According to Pallas, these striped squirrels dig their burrows in woody places, in small hummocks of earth, or near the roots of trees; but never, like the common squirrels, make their nests in the trunk or branches, although when scared from their holes they climb with facility, and make their way from branch to branch with great speed. A winding passage leads to their nest, and they generally form two or three lateral chambers to store their food in. In its whole habit it differs from the squirrels which live in trees, and forms, with other striped squirrels, a division of the genus. It has a longer head than the common squirrel; rounded ears, not tufted; a roundish, hairy tail, which it less frequently turns up; a slender body, and shorter limbs. The fur likewise is very short, and less fine. Yet in its diurnal habits, and in not becoming torpid in winter, it comes near the squirrels: it is difficult to tame.

White of Selborne, says in one of his letters:—"I was much surprised at hearing from a man who kept a bird and cage shop in London, that not less than twenty thousand squirrels are annually sold there for the *menus plaisirs* of cockneys, part of which come from France, but the greater number are brought in by labourers to Newgate and Leadenhall markets, where any morning during the season four or five hundred might be bought. He said that he himself sold annually about seven hundred: and, he added, that about once in seven years the breed of squirrels entirely fails, but that in other seasons they are equally prolific. The subject was introduced by his answering to a woman who came in to buy a squirrel, that he had not had one that season, but before that time,

in the last season he had sold five hundred. It appears that the mere manufacture of squirrel cages for Londoners is no small concern."—The taste for squirrel keeping we think has decayed since the time of the amusing "History" of Selborne.

## GYMNASTICS. NO. II.

### FENCING.—SECTION VII. OF DISARMING.

Y dexterously combining the round parades, treated on and figured in the last section, you may often succeed in disarming your adversary. The weakness of the hand in pronation (see observations in Section II), particularly in the thrusts, cuts, and guard of prime, seconde, and quinte is quite evident.

This weakness is still more manifest in the guards termed the hanging guard, the protects, and the inside and outside half-hangers, &c. &c. (Figs. 18 and 19). No aid from the sword-knot can prevent the fingers from

Fig. 18.—NEAR SIDE PROTECT. Fig. 19.—GIVING POINT.

opening and yielding to any impulse in the vertical direction, when the sword is held in these positions. But even a tolerable swordsman may be disarmed in the following circumstances:

1. If he changes from tierce to push quarte, cross his foible from your left towards your right, in the direction of the opening of his fingers, direct your point in the line towards his right eye, allonge, and you will both hit and disarm him.
2. If he cuts over your point, or pushes quarte-over, use your round parade of quarte; instantly rolling your hand into pronation, direct your point in the line as before.
3. Parry any assault made over your arm with the pointe volante in tierce, hurl down the vertical cut, end it in a thrust, opposing your hand well in quarte, and he will be cut, hit and disarmed.
4. If he pushes prime, seconde, or quinte, &c., his hand is ready prepared to be disarmed by the slightest impulse of your weapon in quarte, touching his foible. Be careful to disarm in the line, that you may not be exposed, in the event of your not succeeding in your plan.
5. If he pushes or cuts under your arm, rotate your hand, describing the half-circle three or four times in continuation; adhere closely to his blade, and he may be thus disarmed. Your point, in this case, describes circles, although this guard is termed the half-circle.
6. The following mode of disarming is safe and certain, however unfair it might be deemed in the schools: parry his quarte over with your round parade of quarte; and before his foot strikes the ground depress his foible, and adhere to it with your foot; seize the fort of this sword with your left hand, and he will be instantly disarmed, &c., &c. Attempt none of these modes of disarming before you feel yourself completely dexterous in the preceding parts.

#### OF THE TIME-THRUST.

Timing is the summit and very last stage of the art of defence, and not to be attempted, except by the ablest swordsman. It consists in the anticipation of your adversary, by nicking that point of time which is the most favourable and safe for you to make a thrust. The thrust delivered at this critical moment is called the time-thrust, and is of four kinds.

1. The first is, the time-thrust, which you deliver on his first movement to assault you, when you are both engaged within the proper measure. As, suppose he raises his point, or feigns; in either case, dart in a simple thrust, opposing your fort, either in quarte or tierce, as the case may require, and you will probably anticipate him, it being above two to one in your favour if you nick the time.
2. The time of the arrest is a decisive thrust, when properly executed. Be careful to take your station on guard, at least twenty-four inches beyond the extent of his allonge; at this distance he cannot reach you;

he must, therefore, advance one step. He means, suppose, to engage your blade in tierce; do not meet or touch his blade with yours, but nick the time of his first movement, and anticipate him by your well-delivered quarte. Recover quickly, and spring back to your former ground, or rather twenty-four inches farther back. Use your round parade of either quarte or tierce, as you are recovering; repeat the same if you can seize an opportunity, as it will be safer for you to act in this manner, than to risk a contest with him in close action. You give the time-thrust gratis, unless he is pre eminent in the art.

3. Should he, standing out of measure as before, advance to join your blade in quarte, do not suffer your blade to be touched, seize the time of his advance, and send home a quarte over the arm. Spring back to your ground as before; you may throw in a quarte under his arm as you recover.

4. Counter-timing. If your antagonist should decline to advance, in the expectation of timing you as you advance, you may counter-time him in this manner:—Advance in tierce, to excite him to deliver his time-thrust in quarte, as you are advancing, whirl your hand forcibly into the half-circle, with your point directed in the line, and you will parry and counter-time him at the instant he delivers his thrust.

Again, suppose he will not advance, but rather wait, for the purpose of timing you on your first movement. He stands guarded in tierce to allure you to engage his blade in quarte, that he may time you with his quarte-over, as you advance from the pointe volante in tierce, and his foible will be precisely applied to your fort; from this position hurl down a vertical cut; end your cut in a thrust along his blade, over his arm. If you succeed in this stroke, as you must if you do your duty, you may continue to pour in thrust after thrust incessantly until he submits.

If, however, your antagonist has recovered quickly, and parried your assault by the pointe volante, which seems to be the only parade adequate to the purpose, the assault may be continued. In this case, the best general rule is to use your round parades, and the point volante. Hesitate not to excite him to cut at your lower extremities. For example; if he cuts low at your thigh, withdraw it a little; seize this critical moment, and cut down vertically through his face; terminate this cut in a thrust, in conformity to the Roman practice, as in fig. 20.

Fig. 20. THE TIME-THRUST.

Thus far of the small-sword; the next treatise will be devoted to the use and exercise of the basket stick and BROADSWORD.

THE CALAMITIES OF A DOOR-PLATE.—Attorneys, surgeons, artists, professional men, generally have their names on their doors. A name on a door is a fine thing when accompanied by plenty of dirt on the scraper; in other words, when it causes an influx of business. It occasions, however, certain results which are inevitable. In the first place, a name on the door, constantly for a twelvemonth after its institution, and from time to time ever afterwards, is sure to procure for its owner visits from sham missionaries, begging-letter imposters, and all varieties of the "doo." Secondly, especially during this period of railway speculation, it entails upon him, daily, the plague of loads of prospectuses of all kinds, foreign lottery schemes, and other catchpenny circulars, by thousands. These, offering, for the most part, opportunities for the "eligible investment," of capital, are often addressed to those who have no capital to invest, eligibly or otherwise. What cruel irony to the professional pauper! In this respect, Assurance Companies are a great nuisance, and very provoking is their assurance. The bored one, it is true, may laugh in his sleeve at the attempt on his visionary Three Per Cents., or, if a smoker, he may light his cigars with its vehicle:—so much for his consolation! But there is one atrocious thing which these circular-writers do, and which, at least, they ought to discontinue. They frequently have their letters directed in a female hand—and that to the young, and enamoured bachelor. This involves a hoax which we have no hesitation in terming heartless. Thus to raise emotions only to crush them is a mockery worthy of no place above Pandemonium—except 'Change Alley. Send your prospectuses, ye speculators, to capitalists and married men!

## EIDER FOWLING ON THE COAST OF NORWAY.

The rocks and sea-coasts of Norway, the rugged steeps and barren precipices of the Shetland, Orkney, and Feroe islands, and the wild scenery of the Hebrides, are the abodes of numerous tribes of aquatic birds, as puffins, herons, cormorants, and eider fowl. The simple inhabitants of some of these secluded spots depend in a great measure upon these creatures for their food and clothing. The flesh of some is eaten when fresh, and some salted for keeping: the eggs are esteemed excellent food, though much too strong in their taste to be relished by persons unaccustomed to such delicacies: the skin of the eider ducks form under-clothing, which is proof against very severe cold; and, without any very material injury to the birds, a vast quantity of the finest down is collected from them annually. This invaluable substance is so firm and elastic, that a quantity which, when compressed, might be covered by the two hands, will serve to stuff a quilt or coverlet, which, together with extreme lightness, possesses more warmth than the finest blanket. The importance of such a defence in the inhospitable climate of these exposed regions, may be well imagined. Accordingly, one of the chief employments of the inhabitants is the collection of these indispensable articles, an occupation, in the pursuit of which the adventurous fowlers are often exposed to dangers, the bare idea of which would seem enough to deter the most courageous from the attempt, had not long practice rendered them almost insensible to fear. We shall give a short account of the method pursued on these occasions.

On the coast of Norway there are many low and flat islands, upon which the birds, during their breeding season, lay their eggs in great abundance: these the fowler approaches in his boat; leaving it moored to the rocks, he quietly examines the nest, which are made on the ground, constructed of sea-weeds, and lined with the finest down, which the female plucks from her own body. The eggs are generally four in number, of a pale green colour, and somewhat longer than a common duck's egg. With great caution and gentleness, the fowler removes the female from the nest, and takes possession of the superfluous down and eggs, being careful, however, to leave one behind lest the nest should be deserted. The patient bird endures this robbery with the greatest resignation, and immediately commences the reparation of her loss, by laying more eggs, and covering them with fresh down; in which latter office her faithful mate bears a part, and yields up his own plumage for the defence of their yet unhatched progeny. This operation is often repeated more than once upon the same nest. It is asserted, that although the birds will bear quietly this treatment from the hands of those to whom they are accustomed, the appearance of a stranger is by no means acceptable, and that they testify their displeasure at the work of destruction by loud and fearful screams. This singular fact may perhaps be accounted for by the great kindness with which the natives treat them; so great indeed, that in Iceland, they have been almost rendered tame, and will often build their nests close to the houses. Their quiet and peaceable dispositions are also manifested by the circumstance, that two females will sometimes lay their eggs in the same nest, in which case they always agree remarkably well.

The ease and facility, however, with which the plundering of these nests is effected, are remarkably contrasted with the extreme danger to which the same occupation is exposed in other parts. The most precipitous and inaccessible rocks are often the chosen abodes of these winged creatures, where they remain in apparent security, seemingly far removed from man's rapacious hand. But who shall say what difficulties are so great that patience and courage may not overcome them? The bold adventurer, insured to toil, with sinews well strung by constant labour, and animated by a spirit of dauntless courage, climbs the most rugged steep, surveys with coolness the most frightful precipices, and, trusting himself to ledges of rock scarcely large enough for the foot to rest on, loads himself with the hard earned spoil, and returns to the bottom with as much indifference as ordinary men would descend a ladder.

The Holm of Noss, a vast rock separated by some violent convulsion of nature from the island of the same name (one of the Shetland group), presents remarkable difficulties to the bird-catchers. Its sides are extremely precipitous, its distance from the main-land is about sixteen fathoms, and the gulph between is occupied by a raging sea—yet have all these been overcome. A kind of bridge of ropes is thrown across, by which the fowler, seated in a cradle, is drawn over, and commences his operations. The original formation of this bridge, if such it may be called, is somewhat remarkable. The rock had been long inaccessible, when at last an adventurer, bolder or more skilful than the rest, having landed at the base, contrived to scramble his way to the summit, after encountering incredible difficulties; his companions threw across to him a strong rope, which he made fast to several stakes previously driven firmly into the ground, and the same was done by them on the opposite side; to this rope a basket or cradle was then attached, which by means of cords fastened at either end, might be drawn backwards and forwards. The end of the story is truly tragical. Emboldened by the success, instead of returning by the means of conveyance he had thus provided, the unfortunate man determined to descend the rock where he had come up; but the task was too difficult even for his practised foot;

one false step, and all was over; his mangled body at the foot of the rock too plainly attested the madness of the attempt.

But not always can even these means be had recourse to; it is often necessary to descend from the cloud-capped summit down the face of the naked precipice, to seek for nests hidden in the fissures of the stone. The reckless daring exhibited by the islanders on these occasions, has called forth the admiration and wonder of all who have had an opportunity of witnessing them. We subjoin the account given by Sir G. Mackenzie, of the method which the inhabitants of the Faroe islands pursue in their search for puffins. "When the rocks are so high and smooth as to render it impossible for the fowlers to ascend, they are let down by means of a rope from above. To prevent the rope from being cut, a piece of wood is placed at the verge of the precipice. By means of a small line, the fowler makes signals to those above, and they let him down or pull him up accordingly. When he reaches a shelf of the rock where the birds have their nest, he unties himself, and proceeds to take them. Sometimes he places himself on a projecting rock and, using his net with great adroitness, he catches the birds as they fly past him—and this they call veining. The mode of catching birds is even practised while the fowlers are suspended. When a projection of rock is between the fowler and the place where the birds are, he swings himself from the rock so far that he turns round the projection. In this, great address and courage are requisite, as well as in swinging into a cavern. When he cannot, with the help of his pole, swing far enough, he lets down a line to people stationed in a boat below, who swing him by means of it as far as is necessary to enable him to gain a safe place to stand upon. Besides being exposed to the risk of the rope breaking, the fowler is frequently in danger of being crushed by pieces of the rock falling down upon him." The same method is pursued in the other islands. The ropes employed are of two sorts—one made of hides, the other of hair of cows' tails—the former are most esteemed; they have the advantage of ancient usage to recommend them, and they are, besides, less liable to be worn away by the sharp edges of the rock. The mode of constructing them is as follows:—A hide of a sheep, and one of a cow, are cut into slips, the latter being the broader; each slip of sheep's hide is then plaited to one of cows', and two of these compound slips are then twisted together, so as to form a rope of about three inches in circumference. The length of these ropes varies from ninety to about two hundred feet, and they are sold at thirteen-pence a fathom. So highly are they valued, that, at St. Kilda, a single rope forms a girl's marriage portion. In this island, the most westerly of the Hebrides, a mere speck of land in the wide waters of the Atlantic, old and young alike engage in the same hazardous pursuit. Accustomed from infancy to creep to the extremest verge of the precipice, dangers which, to the unpractised, appear most appalling, only serve to afford them amusement. A modern traveller informs us that he has seen very young children creep over the edge of a tremendous cliff, thirteen hundred feet high, formed by the termination of Conacher, the loftiest eminence in the island, and considered to be the highest precipice in Britain, and coolly collecting the eggs or birds by means of a slender pole like a fishing-rod, furnished at the end with a noose of cow hair, stiffened by the feathers of a solan goose. The same writer witnessed the extraordinary feats of a bird-catcher, who while supported by one companion alone, with whom he was conversing carelessly, contrived to catch four birds, and, burthened with two in each hand, still held fast by the rope, and, striking his foot against the rock, threw himself out from the precipice, and, returning with a bound, would again dart out, capering and shouting, and playing all manner of tricks. When we consider that one false step of the man above, one momentary yielding of his strength, would inevitably prove fatal to both, we cannot but feel the greatest astonishment at their presence of mind. Accidents, however, though extremely rare, do sometimes occur, and those of the most frightful nature, of which the following may serve as examples:—

It is by no means uncommon for fowlers to proceed alone on these excursions; on such occasions they fasten the rope to a stake driven into the ground above, and thus descend. It was upon one of these solitary expeditions that the following occurred: A bird-catcher left his home one morning to pursue his usual occupation, but alone; having secured his rope to the summit of the cliff, he let himself gradually down, and reaching the spot where the rock overhung a ledge, on which he expected to reap an ample harvest, he dexterously swung himself forwards, and gained the resting-place. As he expected, he here found a number of nests, and in his ardour forgetting the usual precaution of fastening the rope round his body while in the act of plundering a nest, the cord slipped from his grasp, and, after swinging backwards and forwards for some time, but without coming within reach, at length settled many feet from the spot where he stood. For a moment he stood aghast, uncertain how to act; the sudden blow almost deprived him of the power of thinking; gradually, however, he recovered the use of his faculties, and looked anxiously around for means of escape. Fearful in truth was the prospect: the heavy mass of rock above, smooth as if chiselled by the mason's hand, offered no crevices to which the most tenacious grasp might cling: many hundred feet below, the raging waters burst with terrific noise upon the pointed crags; while the depth to which he had descended, the solitude of the spot, and the roar of the tumultuous waters, altogether precluded the possibility of making himself heard, and summoning assistance to rescue

him from his dreadful situation. One chance alone remained, and that a desperate one; by a bold leap he might regain the rope—it was an awful hazard; if he failed, instant destruction must be the result; but death, though slower in his present state, was no less sure; his resolution was taken; breathing a short and energetic prayer, he summoned all his strength, and fearlessly sprang forward. He lived to tell the tale, for the rope was caught, the summit gained in safety.

Such are the usual methods pursued for capturing birds when they build near the summit of the highest rocks, and such the dangers to which the attempt is exposed. But similar risks are run in taking those which have their haunts below. For this purpose, the expedition sets out in a boat, and having landed at the spot selected for their operations, one of the most daring of their number fastens a rope round his waist, and taking in his hand a long pole, furnished with an iron hook at one end, either climbs up the rock, or is thrust upwards by his companions, until he can find a resting-place sufficiently large for their purpose. Having reached this spot, he lowers the rope, and hauls up one of the boat's crew; the others are then raised in the same manner; and this process of climbing and hauling is repeated as often as necessary, until they reach the spots most frequented by the birds. The fowls then separate, and distribute themselves over the face of the rock, acting, however, for the most part in pairs, each being provided with a rope and fowling-staff. For the sake of mutual security, two frequently connect themselves together by their ropes, and whenever the nests are below the ledges on which they stand, one permits himself to be lowered down by the other, until he can reach them. In this laborious occupation they often spend many days together, throwing the booty they have collected into the boats below, and spending the nights in crevices of the rocks, being at the same time not unfrequently but ill supplied with provision. Another plan sometimes adopted in these islands is that of setting gins or nooses over night, in places most frequented by the birds; these are examined next morning, and often afford a large supply. It was upon one of these occasions that the following occurred:—A bird-catcher of St. Kilda had been fixing some traps upon a ledge, elevated about 150 feet above the level of the sea, and was moving forwards for the purpose of regaining his rope, when, unfortunately, his foot caught in one of the nooses, and before he was aware of the fact, tripped himself, and fell over the edge of the precipice. There he hung, suspended by one leg, and with a full view of the boiling surf below him. In vain he wrenched his body round, strove to grasp the edge from which he had fallen: all his exertions were to no purpose: the bare stone afforded nothing to his grasp, and his strength became rapidly exhausted. He shouted and screamed, till the rocks re-echoed with his clamour, but none was at hand to bear him succour; the shades of night were fast closing in, and he was obliged to resign himself patiently to his fate, hoping that the morning might bring some assistance. In this perilous situation he passed the livelong night. Pierced with cold, suffering the severest agony, the weight of his whole body being supported by one limb alone, and momentarily expecting the noose to give way and precipitate him headlong into the angry waters, it seemed as if the hours would never end. But morning came at last, and, as surrounding objects gradually emerged from the darkness which had concealed them, his eyes wandered anxiously around in search of some sign of life. Who may describe the pleasure that thrilled through his bosom, as first he distinctly recognised the form of a companion? The sight gave new vigour to his frame; he summoned all his strength, and uttered a loud cry for help. His call was heard, and no time was lost in relieving him from his dreadful situation.

We who have been brought up in comparative ease and luxury, can scarcely picture to ourselves a more wretched lot than that of these poor islanders, compelled to undergo such toils, and expose themselves to so great dangers, for acquiring the mere necessities of life; yet they are a happy race of men, and would be loath to exchange this kind of existence, with all its excitement and pleasure, for the more quiet lives and less spirit-stirring employments of the inhabitants of cities.

**A SQUIRREL'S RETREAT.**—A young lady, residing in the neighbourhood of Tarvin, had two pet squirrels, in whose frolics she naturally takes considerable interest; during a recent visit of some friends they were taken out of their cages, when one of them suddenly disappeared; anxious search was made, but without effect, till a shriek from one of the rural beauties of the party led to the startling discovery that the mischievous little animal, in the bustle to escape, had actually taken refuge in that part of the young lady's vestments which is supposed to give additional grace to the female figure, thereby creating additional bustle.

**A CAUTION AS TO PHYSIC FOR HORSES.**—A correspondent of the *Ulster Gazette* says, "there can be no greater cruelty towards man or beast than to physic them to death" unskilfully. It has been my lot to attend three cases of superpurgation in the horse within the last ten days, caused by the administration of purgative balls, compounded by druggists, two of which cases terminated fatally within twenty-four hours. It is a crying and extensive evil that country druggists and apothecaries should continue in the practise of compounding the prescriptions of quacks for horses, &c.; and it is penny wise and pound foolish for owners

of horses to resort to them instead of legitimate veterinary practitioners. The danger of giving badly compounded medicines to horses is very great, and the consequent evils and loss are decidedly more than can be calculated on by any but veterinary surgeons. I must confess, were I to place before the public, in round numbers, the loss sustained by owners within the circle of my own observation and practice, during the last three or four years—not to speak of prior periods—the amount would be startling, and would be a serious and appalling lesson to holders of every description of live stock."

**WILD FOWL.**—It not unfrequently happens, in the absence of the moon during the winter months, that wild fowl, comprising geese, ducks, mallards, widgeons, &c., attracted by the glare issuing from the Hapburgh lighthouses, come in contact with the glass in front of the lanterns with such force as to fall lifeless on the platform beneath; fortunately the former, from its thickness, resists the injury it would otherwise receive, and only one instance is recorded where a square was broken. On Monday night the 6th, the wind blowing hard from the S.E., accompanied with rain, disturbed the birds in the immediate neighbourhood, and, extraordinary to relate, they assembled in such numbers at the upper light that forty-five dozen larks, and 8½ dozen starlings, besides several other birds, were captured.—*Norwich Mercury*.

**THE JUNGLE FOWL OF BENGAL.**—From the above race of birds we derive our stock of domestic poultry, and the jungle-cock of the East is reckoned by connoisseurs in general to outvie the peacock, if not in plumage at least as a culinary luxury. African tastes unanimously approve the dainty meat which the above highly-prized game affords, and perhaps next to the florakin it may be said to excel all others. The jungle-cock is a very shy bird, and for the most part affects dense covers bordering upon the paddy (rice) fields, from which it contrives to collect a substance which keeps it perpetually fat. At dawn of day these birds parade the skirts of the woods, and are in their nature exceedingly fierce and combative, seeking their opponents, who are apt to declare themselves by their challenging signals in their respective localities, when mortal combats occur, and their long sharp spurs carry with them danger in earnest. It may appear somewhat remarkable, but the jungle fowl uniformly support one plumage, which is that of a brilliant aureate shade, intermixed with a radiant green; the hen birds are nearly black with yellow feathers chequering their graceful necks. The fowl do not run so large as, or attain to, the size of our common barn-door kind, but they inherit a flavour which exceeds that of our choicest poultry. A young jungle fowl, when eaten cold, is in close relation to a mellow bullock's hump, and, welcomed with a glass of first-class Madeira, may be deemed an unsurpassable luxury—one that none but a Bengalee can duly appreciate.

**INSTINCT OF THE DOG.**—"One of my followers," says Bishop Heber, "a poor pariah dog, who had come with us all the way from Bareilly, for the sake of the scraps which I had ordered the cook to give him, and, by that sort of instinct which most dogs possess, always attached himself to me as the head of the party, was so alarmed at the blackness and roaring of the water that he sat down on the brink and howled piteously when he saw me going over. When he found it was a hopeless case, however, he mustered courage and followed; but, on reaching the other side, a new distress awaited him. One of my faithful sepoys had lagged behind, as well as himself, and when he found the usual number of my party not complete, he ran back to the brow of the hill and howled; then hurried after me as if afraid of being himself left behind, then back again to summon the loiterer, till the man came up, and he apprehended that all was going on in the usual routine. It struck me forcibly to find the same doglike and amiable qualities in these neglected animals, as in their more fortunate brethren of Europe."—*Knight's Weekly Volume*.

**ORIGIN OF THE BIRMINGHAM GUN TRADE.**—I have already observed, that the sword was the manufacture of Birmingham in the time of the Britons. But tradition tells us, King William was once lamenting "that guns were not manufactured in his dominions, but that he was obliged to procure them from Holland at a great expense, and greater difficulty." Sir Richard Newdigate, one of the members for the county, being present, told the king "that genius resided in Warwickshire, and that he thought his constituents could answer his majesty's wishes." The king was pleased with the remark, and the member posted to Birmingham. Upon application to a person in Digbeth, whose name I forget, the pattern was executed with precision, which, when presented to the royal board, gave entire satisfaction. Orders were immediately issued for large numbers, which have been so frequently repeated, that they never lost their road; and the ingenious artists have been so amply rewarded, that they have rolled in their carriages to this day. Thus the same instrument which is death to one man, is genteel life to another.—*Hutton's History of Birmingham*.

**CHEERFUL COMPANY.**—A companion that is cheerful, and free from swearing and scurrilous discourse, is worth gold. I love such mirth as does not make friends ashamed to look upon one another next morning; nor men, that cannot well bear it, to repent the money they spend when they are warmed with drink. And take this for a rule: you may pick out such times and such companions, that you may make yourselves merrier for a little than a great deal of money; "Tis the company, and not the charge, that makes the feast."—ISAAC WALTON.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER X.

TOM CRIBB, CHAMPION.—*continued.*

**ON** the formal retirement, however, Cribb never allowed the title of Champion to be questioned; and at the conclusion of the set-to between Harmer and Lancaster, at the Fives Court, on August 7th, 1820, the Champion rushed in, almost out of wind, made his way through the audience in a twinkling, ascended the stage with great rapidity, and threw up his hat. With his other hand he snatched out his pocket-book, (which, by the bye, was full of *soft*), and, with great animation and good emphasis, spoke to the following effect—Tom keeping in mind our immortal bard's advice to the actors,

"To suit the action to the word."

"Gentlemen,—I will fight Neate for 1,000 guineas, or for 500 a-side. (Bravo.) I have been just told, while I was taking a few whiffs over some cold brandy and water, that Neate had publicly challenged me. I therefore lost no time to show myself before you. Gentlemen, I do not like this chaffing behind a man's back. I won't have it. I am an Englishman; and I will behave like one. An Englishman never refuses a challenge—(thunders of applause from all parts of the Court.) Neate is my countryman, but what of that? If he refuses to meet me, I will fight any man in Bristol for 1,000 guineas, and stake 100*l.* directly. Here's the blunt!—(showing the sweeteners of life.) My countrymen used me ill when I was last at Bristol; and Neate behaved rude to me—(Hear! and 'Tom's quite an orator; he must certainly have taken lessons from Thelwall.') Perhaps 'the old fool' may be licked; but I will give any of them some trouble first before they do it—('There is no one on the list can do it, Tom.') I will tell you, Gentlemen, they say Neate shall fight my boy, Spring, because they know he is unwell. This conduct isn't right; my boy's in a consumption—(Loud laughter.)—therefore, I will fight Neate instead of him—(Bravo.) My boy Spring has not got belly enough for him, but I have—(Clapping his hand upon his rotundity of abdomen. 'You have too much of it.') Never mind, then, I am right enough about my bottom—(Great applause and laughter.) I will fight; and blow my dickey, (striking very hard his fist on the rails of the stage) but I will give any of them that fight me pepper—(Tumultuous cheering, and 'To a certainty you will, Tom.')

This challenge of Neate, however, soon assumed a palpable form, for on Thursday evening, January 4, 1821, the Champion having called in at the Castle Tavern, to take a glass with his friend, Tom Belcher, a swell, from Bristol, and an admirer of Neate, without ceremony proposed the battle. The challenge was immediately taken up by Mr. James Soares, who felt for the pride of the metropolitan prize ring, and offered to stake 100*l.* if the Champion would consent to fight for the sum mentioned. Cribb answered, that he had said he would not fight for less than 500*l.* a-side, in consequence of his business, but there had been so much chaffing about it, that he would fight Neate for 200*l.* (loud cheers). The articles were immediately drawn up and signed by the respective parties:—

Castle Tavern, Holborn, Jan. 4th, 1821.

I Mr. James Soares, on the part of Thomas Cribb, puts down ten pounds; and Mr. J. E. on the part of William Neate, also puts down ten pounds; to fight for 200*l.* a-side, between Bath and London, on Wednesday, the 9th of May, 1821. To be a fair stand-up fight; half minute time; in a twenty-four feet ring. The above twenty pounds are placed in the hands of Mr. Belcher. The whole of the stakes are to be deposited in the hands of Mr. Belcher, and who is appointed to name the place of fighting. The sum of 100*l.* a-side to be made good, at the said Mr. Belcher's, the Castle Tavern, Holborn, on the 24th of January, 1821. An umpire to be chosen by each party; and Mr. Jackson to name referee. The whole of the money to be made good, 200*l.* a-side, on the 9th of April, 1821, at Mr. Cribb's, the Union Arms, corner of Pantion and Oxendon-streets, Haymarket, between the hours of seven and ten o'clock in the evening. In case of either party not making 100*l.* good, the above deposit 20*l.* to be forfeited.

Witnessed, P. E.

Thomas Belcher.

Signed, J. S.

J. E.

A screw, it seems, had been loose between Neate and the Champion of England for some time past, which was now to be decided by the fist. Several wagers were immediately offered, that the stakes were not made good; more especially as Neate was to be consulted upon the subject. It was, however, well known that Neate a short time ago, offered to fight Cribb for 200*l.* a-side. The Champion was much too heavy, but the good effects of training, it was thought, would put that all to rights. The sporting world were all upon the alert, to see the Ould One once more take the field. The Champion's last memorable contest with Molineux was on September 28, 1811; nearly ten years having elapsed without receiving a challenge; Cribb ought not to fight—it was giving a chance away—so said the knowing ones.

At ten o'clock on the night mentioned, (24th Jan.,) the articles were called for and read; and the backer of Cribb (the President of the Daffy

Club,) said his 100*l.* was ready, but no person appearing on the part of Neate, the deposit-money, 10*l.* a-side, was given up to the Champion. The chairman then gave the health of Cribb. The Champion, in returning thanks for the honour he had received, said he was much more capable—nay, he would sooner fight than make a speech.

The chairman, in a very neat and appropriate speech, thought the sporting world ought not to permit the Champion to accept of any more challenges. It was upwards of nine years and a half since he had entered the ring. He was growing old; had young kids to provide for, and the gout now and then paid him a visit. He had beaten all his opponents in the highest style of courage, but it could not be expected that he could "get the best" of the infirmities of human nature. Yet the Champion was too game to say "No" to any challenge. He thought Cribb ought to retain his Championship till he was flogged by Old Time.

Several first-rate amateurs, in short but pithy speeches, addressed the meeting on the subject, and all of them concurred in the opinion of the chairman: but, as to fighting, in future the Champion must "tie it up."

(On the day of the Coronation, July 19, 1821, his Majesty, in passing down the hall, during the procession to the abbey, cast a pleasing glance upon the person of Mr. Jackson, by way of recognition, which most pleasingly convinced the Commander in Chief of the P. R. that he still lived in the memory of his beloved Sovereign and once great patron. Tom Cribb and Tom Spring were also habited as pages, guarding the entrance of Westminster Hall. The manly appearance of the two "big ones" attracted the notice of most of the great folks who were present at the above august ceremony.

The following letters of thanks were individually received by those pugilists who assisted to keep the peace, and protect the persons of the visitors, at the Coronation:—

Whitehall, 21st July, 1821.

My Lord,—I am commanded by His Majesty, to express to your Lordship His Majesty's high approbation of the arrangements made by your Lordship in the department of the Great Chamberlain of England, for the august ceremony of His Majesty's Coronation, and of the correctness and regularity with which they were carried into effect.

To the exemplary manner in which these duties were performed by your Lordship, and by those officers who acted under your Lordship's authority, His Majesty is graciously pleased to consider that the order and dignity, which so peculiarly distinguished the ceremony, are in a great degree to be ascribed; and I have to request that your Lordship will communicate to the persons referred to the sense which His Majesty has condescended to express of their services.

I have the honour to be, My Lord,

Your Lordship's most obedient humble Servant

The Lord Gwydyr  
Deputy Great Chamberlain of England,  
&c., &c., &c.

SIDMOUTH.

Great Chamberlain's Office, July the 2th, 1821.

SIR,—Having received His Majesty's Commands, through the Secretary of State for the Home Department, to communicate to you, Sir, His Majesty's gracious approbation of the manner in which you have discharged your duty on the 19th of July,—I know no way so effectual of executing these most gratifying instructions, as by inclosing you a copy of the original document. Permit me at the same time to add, how sensible I am of your attention to the very imperfect directions I was enabled to furnish you with, and that the arrangements, which have been with so much condescension noticed by your King, are in a great degree to be attributed to the loyalty, judgment, and temper, exhibited by you at His Majesty's Coronation.

I remain, Sir,

You faithful and obedient Servant,

GWYDYR.

To Mr. Thomas Cribb, &c.

Lord Gwydyr, with the utmost liberality and condescension, presented one of the Gold Coronation Medals, which he had received from the hands of his Majesty King George the Fourth, to the boxers who gave their assistance at Westminster Hall. His lordship also provided a most excellent dinner for all the pugilists, at Tom Cribb's, upon the occasion. After the cloth was removed, and the health of the King drank with four times four, the Gold Medal was raffled for, by the whole of the Boxers, when Tom Belcher proved the lucky man; who still holds the trophy. Tom has been offered lots of blunt for it; but he asserts it is too great an honour, either to be bought or sold.

We now come to our hero's formal retirement; an event which excited considerable interest throughout the circles of the fancy. When a first-rate actor leaves the stage, it is viewed as an histrionic epoch, and the admirers of the art, in general, endeavour to see the last of a "great creature." As a performer of ability, his acts have shown themselves times and oft; his scenes have been various; but tragedy was considered his forte, few men having produced more actual feeling than Tom Cribb. His entrances were marked with confidence, and his exits crowned with applause. New pieces never operated upon his nerves, and he was

always found perfect in his part. His readings were emphatic, his action important at all times, and his firm mode of treading the stage, a lesson to all young performers. With all the respect due to Messrs. Kemble, Kean, and Macready, they never made so many great hits as the hero now retired from an arduous profession has done. On Saturday, May 18, 1822, the Champion of England made his bow to the amateurs, at the Fives' Court. Tom had to boast of a Corinthian attendance, and St. Martin's-street was filled with carriages. The sets to generally were good. The Champion of England and Spring ascended the stage, amidst loud approbation. Cribb was decorated with the belt. It was an excellent combat; and, although Tom had a touch of the gout, he displayed great activity. But the awful moment had now arrived for poor Tom to say, farewell! He scratched his nob—looked about him—his heart full of gratitude—at a loss what to say—and his tongue almost forsook its office. After a struggle to give vent to his feelings, he at length delivered himself of the following words:—"Gentlemen, I return you thanks for your kindness this day. (A short pause.) Indeed, gentleman, I sincerely thank you for all the favours you have conferred on me—I do indeed. (A long pause, as if Tom had stuck fast.) Gentleman, may your health and purses never fail you." Cribb now retired, amid long and loud plaudits, accompanied with—"It will be a long time before we shall look upon your like again in the Prize Ring."

Spring now mounted the stage, and thus addressed the spectators:—"Gentlemen, I once more present myself to your notice, but as my old Dad has retired from the stage and the Prize Ring altogether, and as I have stood next to him for some time past, I mean now to stand in his place, till I am beat out of it!" An amateur and Spring went up to Tom Belcher, and informed him, that Spring was ready to fight Neate for 300l. "Very well," replied the hero of the Castle; "now I know what you mean; we will talk about it. I shall name it to Neate."

To these proofs of courage and forbearance we will append a sample or two of his humanity as an unfailing accompaniment of true valour.

Our hero made his bow before the magistrate, on Wednesday, December 18, 1822, as the friend and protector of the helpless, in the person of a German dwarf, named John Hauptman. This little fellow, whose extreme altitude was forty inches, obtained a living, during many years, by hiring himself out as an exhibition to itinerant showmen. But his day had gone by—other and more youthful dwarfs had superseded him in the public favour, and poverty was pressing heavily on his head, when, in the midst of his destitution, accident led him to the hospitable fireside of Tom Cribb. The Champion listened to his tale of poverty; cheered his frame with the comforts of his bar and his larder, and told him, he was welcome to stay at the Union Arms till he could find a better shelter, and he resided there as a sort of assistant waiter.

A drunken hackney-coach master, named Beckett, during the Champion's absence, on the previous Monday, not only insulted the little fellow, but encouraged his son, a lad of about ten years old, to beat him, and for this outrage on his protégé, the Champion now sought redress.

The burly-built hero of the ring entered the office, leading his tiny friend by the hand; and he and the lad having been placed side by side on a stool before the bench, the Champion stated what he had heard of the transaction, adding, "The poor little fellow has no friend in the world but me, your worship, and hang me if I would not rather have been beat myself."

"That would not have been so easy a matter Mr. Cribb," observed his worship, and directed the dwarf to be sworn.

The little fellow then gave a very humble and modest account of the affair. He said, in tolerable English, that he was very sorry anybody should be troubled on his account; but Mr. Beckett would not be satisfied unless he would fight with the boy, and because he would not fight, he urged the boy on, till he knocked him down by a blow on the mouth, which cut him vor morsh, and hurt him a good deal.

"The lad pulled out his torn shirt-frill in reply, and the father delivered his defence thus:—"It was the brandy and water that did it, your worship; I'll tell the truth:—it was the brandy and water, sure enough. I have known Mr. Cribb many years." "That's the reason you ought not to have taken advantage of my absence, to insult a poor little fellow you knew I cared so much for," observed the kind-hearted Champion.

The magistrate, after having warmly commended the conduct of the Champion, directed the hackneyman to find bail for the assault. Upon retiring to settle the row, the dragsman made it "all right" with Cribb, by making the dwarf a present of a sovereign.

A sable hero, well known in the fancy circles as Massa Kendrick, was brought before Mr. Birnie, at Bow-street, on a bench warrant, for an assault on the Champion of England! The African kicked most confoundedly, at finding himself in the grasp of the law. When told by the magistrate that he must find good and sufficient bail, he exclaimed—"Bail!—What 'casion for bail?—Massa Cribb de most quarrelsomest man in all England. He's a fighting man, and I'm a fighting man, and if I gibs him punch on the head and he gib me another, what that to anumbody else? What the use eb talking about bail?"

In reply to this tirade the Champion calmly observed, "If I was not to take such a step as this, now and then, I could not carry on my business, or even live in my own house, for these swaggering blackguards." He then explained to the magistrate, that the defendant was noisy and riotous in his house, and in consequence he insisted on his leaving; but, instead of doing so, he seized the Champion by the cravat, and attempted to extinguish his glories by strangulation, at the same time placing his hand under his thigh, apparently with the intention of throwing him. "But," said the Champion, "that was all my eye, for I put him down."

Kendrick was about to retort, but the magistrate stopped his mouth, by ordering him to find the required bail.

Three natty tailors were charged, at Marlborough-street Police-office, in September, 1826, with creating a disturbance, and assaulting Thomas Cribb, the Ex-Champion of England. The defendants went into Cribb's house, where they partook of some liquour. After a few minutes they commenced a disturbance, and he requested them to be quiet; but they swore at him, and challenged him to fight. One of them being pot-valiant, struck him; the example was followed by the others, who insisted on his having a turn with them. A person said, "No, Cribb, do n't strike the three tailors, who are only the third part of a man!" The astonished tailors, on hearing his name mentioned, took up their clothes, and ran quickly out of the house; but Cribb, determining to teach them better, pursued, and lodged them in the hands of the watchman. Sir George Farrant: "Did they beat you?" Cribb, (smiling): "No, their blows were something like themselves—of little importance." Sir George Farrant: "Did you return the blow?" Cribb: "No, sir, I was afraid of hurting 'em; I should not like to do that." The tailors in their defence, said they were sorry for what had occurred; at the same time, they were not aware that the person whom they had challenged to fight was the Champion; on finding their mistake, they instantly left his house. Sir George Farrant: "Aye, you thought you had better try the lightness of your heels, than the weight of his fists." Cribb declined making any charge against them, and they were discharged on paying their fees.

*Cribb and the Cobbler.*—In the same month, the Ex-Champion again made his bow before the beak; but, on this occasion, the Bow-street office was honoured with his portly presence, where he charged a cobbler with causing a disturbance in his house. Cribb said, that the prisoner was, about two years ago, very annoying, and he ordered him never to enter his house again. A few days ago, he renewed his visit; and on Wednesday night he was most riotous and abusive. He (Cribb) did not care much for his abuse; but he could not contain himself, when the cobbler had the impudence to begin abusing the King, he seized him under the arms, and dropped him gently in the street. The magistrate told Cribb, that he had on this, as on all other occasions evinced great forbearance, and directed the warrant to stand over; and, if the prisoner annoyed him again, he would be committed to prison.

Cribb's declining years however, were disturbed by domestic troubles and severe pecuniary losses, and after a long struggle against adverse circumstances, produced by lending money and becoming responsible for a relative, he was forced to give up the Union Arms to his creditors. His last appearance was on Nov. 12, 1840, when under the auspices of the Pugilistic Association, he took a benefit at the National Baths, Westminster Road.

In his character as a publican he was civil, obliging, and entertaining. He availed himself also of the advantages of mixing with the liberal part of society; and material improvement, both in person and manners, has been the result of such intercourse. In the ring, integrity was ever his motto; and, as a sporting man, he was always anxious to do "the thing that's right!" Of the whole race of pugilists, no boxer was ever considered safer to back than Tom Cribb. His heart upon all occasions proved as firm as his person; and his numerous manly combats gave decisive proofs of the extent and courage of his nature. The Champion is of a cheerful disposition in company, a lover of harmony, and sings an excellent song. "Cribb was ready at all times to render service to any of his brethren of the fist—all of whom, it is said, unite in pronouncing our hero entitled to the appellation of a true Briton. May the winter of his days be cheerful and without cloud!"

*OWLS FOR BIRD-CATCHING.*—There comes a man with an owl in a basket, and another tied by the leg on a pole covered with red cloth; another accompanies him with a bundle of reeds, through which a rod runs, smeared all the way down with bird-lime. This apparatus he disposes on a hedge or cover of any kind; the little owl (*Civetia*) sits opposite on his pole; the birds come to tease him, and fly on the bird-lime twig, when, if it be a sparrow, he is effectually detained by the viscus only; if a blackbird, pop at him goes an old rusty gun. "We sometimes catch twenty tomits before breakfast," said a modest looking sportsman, modestly, but not shamefacedly, shewing us one thrush and one linnet.—*Blackwood's Magazine.*

*A LADY DEERSTALKER.*—A Scotch paper states that Lady Seymour is at Achnacarry, enjoying the noble and healthful sport of deerstalking. A few days ago her ladyship took down a splendid stag.

QUEEN'S HEAD, QUEEN'S HEAD COURT, WIND-  
MILL-STREET, HAYMARKET.

**JEM BURN** Respectfully Announces to the patrons of the Good Old English Art of Self-defence, that he has re-opened his great room, where the illustration, exhibition, and practice of Sparring will take place every Monday evening during the winter-months. Master of the Ceremonies, and Gentleman-usher of the Bunch-of-fives, Uncle Ben. Johnny Hannan, and several top-sawyers, will put on the muffers, and "teach the young idea how to shoot."

The sangery affords an admirable retreat for the Corinthians, the club-room is commodious for the commonalty, the champagne celestial, the port potent, the brandy without any admixture of B.B., and the malt of all sorts miraculous.  
God Save the Queen! (and sustain her HEAD.)

## PRICE AND GOSNELL'S PERFUMERY.

NOTICE.—Executors of the late John Gosnell v. Rees Price, Perfumer, 28, Lombard-street, trading under the firm of Price and Co., and previously under the assumed name of "Napoleon Price and Co." The Judges in the Court of Exchequer in this day decided in favour of the plaintiff in this case. The defendant, Rees Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr. John Gosnell (father of the parties now carrying on business under the firm of John Gosnell and Co., 12, Three King-court, Lombard-street), and bound himself, under forfeiture of £5,000, not to commence business within the Cities of London or Westminster, or within the distance of 600 miles from the same, and notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract.—12, Three King-court, Lombard-street, Jan. 27, 1845.

## CAUTION TO THE TRADE. EVERETT'S PREMIER BLACKING.

WHEREAS an Injunction has been this day granted by the Vice-Chancellor of England, to restrain Samuel Allin and others from selling or disposing of any Blacking or Composition under the name of, or as, or for, or described as, or purporting to be the same Blacking as was made and sold by William Everett in his lifetime, and which is now manufactured solely by us, and sold under the name of, EVERETT'S PREMIER BLACKING; all Parties are hereby cautioned against purchasing, selling, or exposing for sale any blacking having affixed thereto, labels in any way similar to those used by us, or any other labels or cards, so contrived or expressed as, by colourable imitations or otherwise, to represent the Blacking to be the same as that manufactured and sold by the late William Everett, and now manufactured only by us, as legal proceedings will be immediately taken against any person who, after this notice, shall in any way infringe on the terms of the said Injunction.  
EVERETT and Co.,  
August 19th, 1845. 51, Fetter-lane, London  
Vide Times and Herald, 20th August, 1845. 7978

## BILE! BILE! BILE!—WORBOY'S

VEGETABLE PILLS safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual constiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1ld. and 2s. 8d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.  
N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

## NO MEDICINE for the CURE of ASTHMA

and Consumption, Coughs, &c., was ever attended by speedy and unflinching success as DR. LOCOCK'S PULMONIC WAFERS. In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.  
Cures of Spitting of Blood, Consumption, Coughs, &c.  
Cures of Pulmonary Consumption in Newcastle-upon-Tyne. Nev. 14, 1845.

Gentlemen.—The demand for your Wafers is increasing daily, which is the best proof of their real utility. I can speak of them, myself, with the greatest confidence, having recommended them in many cases of Pulmonary Consumption, and they have always afforded relief when everything else has failed, and the patients having been surfeited with medicine, are delighted to meet with so efficient a remedy having such an agreeable taste, &c.  
(Signed) JONATHAN MAWSON.  
13, Mosley-street, Newcastle.

Cure of Cough, Soreness of the Chest, &c.  
4, Ridley's Villas, Newcastle-upon-Tyne.  
Dec. 5, 1844.

Dear Sir—I think it due to the proprietors of Locock's Wafers and yourself, to state that I have received great benefit during the short time I have taken them.

Their wonderful effect is immediately allaying cough, soreness of the chest, and irritability, or tickling of the throat, makes them truly valuable to any one afflicted (like myself) with that miserable complaint.

I remain, &c.,  
To Mr. Mawson,  
DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.  
To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1ld., 2s. 6d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

CAUTION.—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.  
If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.  
Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of  
**THE SILENT FRIEND; a Medical Work**  
on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Syphilis, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.  
Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street, Soho, and all Booksellers.

The CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcers, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Syphilis.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure. Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

LONDON.—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIFFLER.—Thursday, Nov. 27th, 1845.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 30. FOR THE WEEK ENDING DECEMBER 13, 1845. THREE HALF-PENCE.

[Stamped to send free by Post, Three-pence.]

## SPRINGING A WOODCOCK.

**I**N the twenty-second number of the SPORTSMAN'S MAGAZINE we figured this pretty little long-bill, and there took occasion to say a few words on the subject of his manners, habit, haunts, and the mode of "bagging" him. For an extension of the remarks there made, the pretty picture which our artist has so seasonably furnished, will form an excellent plea. We therefore proceed to "spring" him anew, and present an amended "bill," as acceptable, we trust, as the one which we hope "the cock," in propria persona, will bring to the bag of every deserving sportsman.

In a highly embellished work entitled "Sporting Scenes and Country Characters, by Martingale," we find the following remarks on woodcock-shooting, and the pretty little Springer, whose merry, lively action is so faithfully delineated by the pencil of our designer.

"The most exciting of all sports connected with the gun, is woodcock shooting. To the sportsman, therefore, no sound is more joyful than the announcement from the keeper, that, during the prevalence of the last foggy weather, the woodcock has arrived. The woodcock visits us from the shores of the Baltic, towards the end of October, but more frequently in November, and usually departs in March, or early in April; but the precise period depends much upon the state of the weather. Like the swallow, and other migratory birds, the cock occupies the same locality, season after season, a circumstance which has been incontestably proved, by shooting birds to which a small piece of wire had been fixed on the previous season.

"The haunts of the cock are generally in the lower parts of the woods, in the immediate neighbourhood of such springs and running brooks as are seldom frozen during the severest winters. It is in these localities that its succulent food abounds. In a remarkably mild season, he visits

the more open situations on the low and exposed grounds. In severe weather, he seeks the protection of the woods and plantations. In his habits, the cock is shy; when flushed, he takes wing with the greatest rapidity; but soon alights behind the first place of apparent refuge. He then runs, with much alertness, to hide himself; and the colour of his plumage is admirably adapted for the purpose of concealment. Two species visit this country: one is called, in some districts, the muff-cock; the other is a smaller bird, whose flight is more rapid, and he is more difficult to kill. The cock feeds by night, when all is still and serene around, save the deep and mysterious tones which the winds occasionally breathe through the woods, rustling the entwining ivy, and shaking the leaves which still cling to the parent tree; whilst the stars are shining in their brightest splendour, and the heavens "fretted with golden fire," present every indication of a pure and frosty atmosphere. Meanwhile, the well-dried fagot is blazing on the cheerful hearth of the woodman, and the tired sportsman, secure from the freezing air, is probably relating, to listening and delighted ears, his morning's adventure, never forgetting to extol the superior qualities of his faithful canine companions.

"More than any other description of game, the cock escapes the ravages of the poacher; for, although he is easily caught with net and springle, by those acquainted with his habits and localities, yet the pursuit of him, by these crafty setters of snares—the close observers of the run of the hare and the roost of the pheasant—would expose them to too great danger of detection to risk the experiment.

"Cock-shooting, indeed, seems to come within the peculiar province of the gentleman sportsman. The blood of the shooter must dance merrily in his veins as he sallies forth, fully equipped for the pursuit, not

"In a wood of Crete, to bay the bear  
With hounds of Sparta."

but with his favourite dogs, in his own well-preserved woods and plantations. The best dogs to be employed on these occasions are springers, low in height, with long bushy sterna, and large dropping ears. It is worth a day's long ride to see the unwearied diligence and perseverance which these little creatures display in hunting, provided they have been well-trained.

"They seldom leave the gunner beyond the space of twenty or twenty-five yards, and should never give mouth. It is surprising, too, how readily they meet the wishes of their master. The encouraging expressions, 'Seek'em, Sprightly;' 'Go along, Tom;' 'Find'em out, Rover;' 'Good dogs:' are constantly responded to by these untiring creatures with renewed activity. Not one inch of ground escapes them; whatever game lies concealed, the little springer is sure to rise it. A very superior dog of this description has been known to sell for thirty guineas—a fact which presents sufficient proof of the estimation in which the little springer is held for the purpose. On some occasions the pointer is used instead of the spaniel; a small bell is attached to his neck, by the sound of which, in a close covert, his position can be ascertained. When the sound ceases, he is pointing at his game, and the shooter, of course, prepared for the anticipated rise. The practice, however, of using pointers is objectionable, as wood-hunting spoils them for the open field or moor. When a bird is flushed, the cry is uttered by the assistants, 'Mark, cock;' bang goes the fowling-piece, and the echoes of the wood, as the mottled favourite falls, dance merrily to the sprightly tune of the sportsman's heart; who, as he secures his prize, feels reanimated for further exertion. The mottled cock is more easily shot than the smaller species; for, if the part of the wood where he ascends be very thick, his flight is rather heavy, especially when compared with his congener, when the cover is of a more open character. The cock is not very tenacious of life; and it is generally considered that a single pellet will be sufficient to bring the bird down. However dense may be the spot where he falls, the little untiring and indefatigable springer soon bears the trophy to his master's feet."

"Cock-shooting may be pursued from the beginning of November to the end of March, and, as has been before remarked, under nearly every variety of weather. If the severity of the season be such that field and wild-fowl shooting is too hazardous, or trying, recourse can be had to the woods whither the favourite bird resorts, and where the shooter, sheltered from the storm and the keen blast, can follow his exciting diversion, without traversing so large a space of ground as is required in the pursuit of the Brent-geese, the mallard, the widgeon, or the teal, and without being exposed to the dangers, the extreme rigour of the season, or all the difficulties inseparable from wild-fowl shooting.

The lover of this diversion, after having secured a few of his favourite birds, may return home, with gladness in his heart, and health in his whole frame, as the gloom of the evening is stealing around, and the half-domesticated rooks are returning, with heavy wings, to the stately avenue. Surrounded by his faithful dogs, he reflects,

"How many things by season seasoned are  
To their right praise and true perfection."

As it is more than probable that, except in deulatory communications from brethren of the trigger, we shall not again "spring" the luscious cock, we shall here give a few remarks on the various methods adopted by fowlers to entrap the woodcock; and against which it does not seem to be equally on its guard as it is against the gun.

It is easily taken in the nets, traps, and springs which are placed in its accustomed runs or paths, as its suspicions are all lulled into security by the silence of the night; and it will not fly or leap over any obstacles which are placed in its way, while it is in quest of its food; therefore in those places barriers and avenues formed of sticks, stones, &c., are constructed, so as to lure it into the fatal openings where it is entrapped; in like manner, a low fence made of the tops of broom stuck into the ground across the wet furrow of a field, or a runner from a spring which is not frozen, is sufficient to stay its progress, and to make it seek from side to side for an opening through which it may pass, and there it seldom escapes the noose that is set to secure it.

They leave the north with the first frost, and travel slowly south till they come to their accustomed winter quarters, they do not usually make a quick voyage, but fly from wood to wood, reposing and feeding on their journey, and prefer for their haunts woods near marshes or morasses; they hide themselves under thick bushes in the day, and fly abroad to feed in the dusk of the evening. A laurel or a holly bush is a favourite place for their repose, the thick and varnished leaves of these trees prevent the radiation of heat from the soil, and they are less affected by the refrigerating influence of a clear sky, so that they afford a warm seat for the woodcock. Woodcocks usually begin to fly north on the first approach of spring, and their flights are generally longer and their rests fewer at this season than in autumn. In the autumn they are driven from the north to the south by the want of food, and they stop wherever they can find it. In the spring there is the influence of another powerful instinct added to this—the sexual feeling. They migrate in pairs, and pass as speedily as possible to the place where they are likely to find food, and raise their young, and of which the old birds have already had the experience of former years. Scarcely any woodcocks winter in any part of Germany. In France there are few found, particularly in the southern provinces, and in Normandy and Britany. The woods of

England, especially of the west, and south, contain always a certain quantity of woodcocks; but there are far more in the moist soil and warmer climate of Ireland, but in the woods of south Italy and Greece, near marshes, they are far more abundant, and they extend in quantities over the Greek islands, Asia Minor, and Northern Africa.

Woodcocks have been known to settle upon a vessel at sea. Mr. Travers, of Cornwall, records an instance, when at a distance from land unusual for birds to be seen, a bird was discovered hovering over the ship; when first discerned it was high in the air, but gradually descended, and after taking several circuits round, at length alighted on the deck; it was so wearied as to be taken up by the hand. Probably this bird had lost its companions, or, by the force of winds, was driven from the true aerial track. In 1700 a couple of woodcocks, seeking shelter from a gale of wind, alighted upon the *Glory*, man-of-war, at that time cruising in the Channel.

In their flight the woodcock, like other birds, is attracted by a glare of light, and many instances have occurred, at the Cromer and Eddystone light-houses, of their falling victims to it; but in 1796, at the light-house upon the Hill of Howth, the man who attends, whilst trimming his lamps, was surprised by a violent stroke against the windows, which broke a pane of plate-glass cast for the place, more than three-eighths of an inch thick; on examining the balcony that surrounds the light he found a woodcock, which had flown with such violence as to break his bill, head, breast-bone, and both wings. The man had often found birds, which had killed themselves by flying against the windows, but never before knew the glass to be injured.

Upon the Sussex coast woodcocks have been seen at their first dropping, in considerable numbers in the church-yard, and even in the streets of Rye, but during the night, the usual time of their flying, they removed further inland, and dispersed. At their first coming on that coast, they are commonly poor, as if wasted by their long journey; and are sometimes scurfy, though not so much as before their return in the spring; and it is remarkable, that when the woodcock first arrives, the taste of its flesh is quite different from what it is afterwards. It is very white, short, and tender, and seems to have little or no blood in it; but after it has been in this country a considerable time, the flesh becomes more tough, stringy, and fibrous, like that of domestic fowls. If a woodcock is shot just before his departure, it bleeds plentifully, whereas, at the beginning of winter, scarcely any blood flows from the wounds: by this it seems that, in those countries where they have their summer residence, they have a different nourishment to that they here find. Probably the luxuriant and succulent food which they meet with among us, prepares them for breeding in those countries where they retire with the companions of their choice.

The woodcock feeds indiscriminately upon earth-worms, small beetles, and various kinds of larvæ, and its stomach sometimes contains seed, which I suspect have been taken up in boring amongst the excrements of cattle; yet the stomach of this bird has something of the gizzard character, though not so much as that of the landrail, which I have found half-filled with the seeds of grasses, and even containing corn, mixed with May-bugs, earth-worms, grasshoppers, and caterpillars.

Mr. Lloyd in his "Field Sports of the North of Europe," observes, "the woodcock usually takes its departure from Sweden towards the end of October or beginning of November, and does not return until the approach of spring. Mr. Grieff says, he never knew the woodcock to make his appearance in the neighbourhood of Stockholm until the 6th of April, which about tallies with the time of their leaving our shores."

"Woodcocks were exceedingly scarce in the vicinity of Störn, which was also the case in all other parts of Scandinavia that I ever visited. This may be supposed when I mention that I never killed more than three in any one day during my stay in the north of Europe. Indeed I never saw more than seven or eight of those birds in the course of a day's shooting, and very generally not one-fourth part so many. During the woodcock's periodical migrations, however, for during the winter not one of them remains in Scandinavia, they are occasionally, as it is said, to be met with in considerable numbers on the western coasts of Sweden and Norway."

"As it is from the countries of which I am now speaking our covers are supposed to be supplied with woodcocks, it may seem extraordinary that those birds should there be so scarce as I have just described, and so plentiful in places with us. This, however, is easily explained, when we consider, that on their breeding grounds, extending over the whole of the north of Europe, there is probably a thousand times as much wood as in the United Kingdom; and, consequently, when they come to us, and are concentrated, if I may use the term, into our small covers, they naturally make a very great show."

"It is generally said that woodcocks are less plentiful in Great Britain than formerly.—This I have heard attributed to the Scandinavians eating the eggs of those birds. If, however, persons who entertain this opinion were to see the almost boundless northern forests, they would probably think with me, that if the whole of the scanty population of that part of the world were to go out for the purpose, they would not be able to explore the hundredth part of the woods in the course of a year, and consequently they could not take or destroy any considerable number of eggs."

In 1796, Mr. Yea, of Swansea, killed one hundred couple of woodcocks in one season. In Ireland, the Earl of Claremont shot half as many in a day, but then it should be premised, that such was the abundance of these birds, as to be sold in some parts (for instance, near Ballyshannon, in the county of Donegal) for one penny each, and the expense of powder and shot.

In the winter of 1797, the gamekeeper of E. M. Pleydell, Esq., of Whatcomb, Dorsetshire, brought him a woodcock which he had caught in a net set for rabbits, alive and unhurt. Mr. P. scratched the date upon a bit of thin brass, bent it round the woodcock's leg, and let it fly. In December next year, Mr. Pleydell shot this bird with the brass about its leg, in the very same wood where it had been first caught by the keeper.

*Woodcock Fancier.*—Mr. Jeremiah Tupman, who died about thirteen years since at Berkeley, caught upon his estate at Lyston, a young male woodcock, which he carefully reared, and having procured a mate for it, they bred in considerable abundance. He was so pleased with his success, that he actually altered his will, which was originally made in favour of a young lady, and left his fortune to the minister at Berkeley, to be principally laid out in the breed of woodcocks, upon the neglect of which the estate was to revert to the family relations; a reversion for which probably the family were not long in expectancy.

## NATURAL HISTORY OF SPORTING.

THE WILD CAT.

LET not the reader confound the stumpy-tailed specimen of the feline race here before him with the sleek grimalkin who sits purring and washing her face with her cushioned forefoot upon his hearthstone; he is quite another guess sort of customer; and although pussy will suffer no small bird or quadruped to escape her velvety claws, even when wild she is quite a distinct animal from the true wild cat which we have figured.

This vermin, which is yet found in several mountainous and wooded districts of Britain (and than which none more richly deserves a place on "the keeper's tree," or the barndoor where the stoat, weasel, polecat, glead, and hawk are stretched in *terrorem*), is pretty general through the less cultivated countries of Europe and Asia. It is common in the forest tracts of Germany, Russia, Hungary, the north of Asia, and Nepaul. It is larger, and has fuller fur, in the colder latitudes.

It was formerly very abundant in this country, and was reckoned as one of the "beasts of chase;" as we learn from king Richard II.'s charter to the abbot of Peterborough, giving him permission to hunt "the hare, the fox, and wild cat." The fur in those days does not seem to have been of much value, for it is ordained in bishop Corboyl's canons, A.D. 1127, that no abbess or nun should use more costly apparel than such as is made of lamb's or cat's skins. The wild cat is still found in the hilly parts of the north of England, and more plentifully in Scotland and some parts of Ireland.

Its general form is robust; the tail is bushy, and fuller at the termination, appearing as if truncated or cut off. The general colour is grey, undulated with transverse blackish stripes; a black streak runs down the back; the tail is ringed; the soles of the feet to the heel are black; two black stripes pass from the eyes over and behind the ears. The fur is deep. Length of head and body one foot ten inches; of the tail eleven inches. Temminck, the German naturalist, gives the total average length as three feet. Hares, leverets, rabbits, and birds are its prey. It is bold and savage, and defends its young with great obstinacy.

Formerly naturalists regarded this cat as the origin of the domestic cat, but of late years this opinion has been disproved. We know that a cat in a domestic condition was one of the animals revered by the ancient Egyptians, and mummies of it are found in the pits of Thebes. Now this cat was not the common wild cat, but a distinct species. In

the second place, the domestic cat is not noticed as being one of the domestic animals of the ancient Britons by any of the Latin writers, nor, indeed, do we hear of it in our island till the tenth century, when we find its value fixed at a high rate, and laws enacted to regulate its preservation.

The Welsh statutes of Howel Dhu (who died A.D. 948) are, in fact, proofs of its importance; and such laws would hardly have been laid down had not the animal been regarded in the light of a new and important acquisition.

If it were indeed the offspring of the wild cat, which then abounded in the forests of our island (even to the extent of being a serious scourge), the opportunities of procuring young broods and of domesticating them would have been so abundant, that all regulations respecting it would have been superfluous; and still less would the then considerable sums of a penny as the price of a kitten *before it could see*, two-pence *until it caught a mouse*, and after that four-pence, have been established. There are, besides, other regulations, all tending to prove the high value affixed to the domestic cat at that period.

In the third place, the wild cat is much larger than our domesticated cat; and this is contrary to the general rule, domesticated animals being larger than their wild relatives. It may be observed that the tail of the wild cat is rather short, full, and cylindrical; while in the domestic cat it is long and taper. Besides, the wild cat stands higher on the limbs, and is of a more lynx-like figure. The teeth too differ in size and placing. Dr. Fleming considers it probable that the domestic kind is originally from Asia, but Temminck considers it as decidedly the descendant of the tame Egyptian cat found now wild in Upper Egypt and Nubia. It is easy to perceive how from Egypt the domestic cat would pass into Greece and Italy, and so into the western provinces of the Roman Empire. It is most probable, then, that Temminck is correct; but still, has not the domestic cat in Europe subsequently intermingled with the wild cat, and produced a mixed, though fertile, breed? We are inclined to think so. Cats of the domestic kind often assume wild habits, and live in warrens, preserves, and woods; but we must distinguish between these and the true wild cat.

Yet is not madam puss to be trusted. She too must be the object of the keeper's observation; and we have known several instances in which complacent pussy, the pet of the fireside, was no mean mistress in the arts of stealthy destruction. The gamekeeper's eye in wet weather as well as in snow should examine his rides and paths to see if the preserves are haunted by these animals; and if their usual runs are wide of his established traps fresh snares should be placed for their destruction. Let him not think, when he has destroyed many that his vigilance is no longer necessary; the demure-looking cat, basking in the sun on a window-sill on Monday afternoon, will frequently be found in the woods a mile from her home trapped on the Tuesday morning. Cottagers often turn out their cats at night. They must prowl somewhere; and as all animals have an instinctive perception of the easiest mode of life, the feline species soon discover that a rat is not only a sharp fighter, but that he is not half so good to eat as a young pheasant, hare, or rabbit; hence they neglect their household duties, and take to the luxuries offered by field and cover.

In an early number we propose to give an article or two under the title of "THE KEEPER'S TREE," wherein the methods of destroying the several kinds of vermin, with traps, &c. shall be made plain by engravings.

## SHOOTING WRINKLES.—NO. II.

### PARTRIDGE SHOOTING.

(From *Le Chasseur au Chien d'Arret.*)

Let us walk at forty or fifty paces one from the other, but in the same line, that our dogs may beat, without stopping, the space which separates us: should any game rise suddenly, let nothing take off your attention—fire: to-day you ought to be injured. Be all eyes and ears in walking, as ready as you were yesterday when your dog was at the point; always thinking that a bird is about to rise, always prepared to fire.

You will miss frequently, but I am there to back you, and our dogs will return with something in their jaws.

Look at this partridge I have just killed; you ought to have saved me the trouble, as it rose under your feet. You fired too soon—your gun was not well to the shoulder: had you hit your game it would have been destroyed; it was only ten paces from you when you touched the trigger.

I have already warned you not to be in a hurry. I shall repeat it to you unceasingly. A young beginner should be preceded by a man carrying a board on his back, on which is written in large letters, "Do not hurry." It often occurs to me that he would be of much service.

You may tell me this does not always depend on yourself: such is possible. I am aware that a partridge may cause the best resolutions to vanish. You lose your head: this I can understand. Listen to me: I will give you some good advice. Do not load your gun: when your game rises, place yourself in position, aim well at it, follow it with your eye; you are certain not to kill it, consequently you can act with cool-

ness. When you have your bird well at the end of your barrels fire the esp. Do this during several days; then load your gun with powder only, and begin again. The conviction that nothing can fall to your shot will soon accustom you fire with a more dangerous weapon, and you will not have to regret the result. I know some excellent shots who served this apprenticeship.

Unquestionably it is no agreeable recreation to walk over fields with an unloaded gun. A sportsman thus equipped may be compared to a Life Guardsman armed with a harlequin's wand; but if you hurry again I shall be obliged to come to this extremity. No imprudence. Let your lock down on the cap: had I not been with you your right hand would have been danger, and probably your face. I am aware you have two hands, but recollect only one head.

The whole secret of arms is in giving without ever receiving. This is what I was told one day by my fencing-master, M. Jourdain—that is to say, do not accept yourself the load reserved for the partridges. If a gun goes off on my side, pay no attention to it; as I offer a larger surface, I can receive the shot: in which case farewell my lesson; it is for your interest I speak.

Good! Now you go into another 'extreme': instead of hurrying, you do not fire at all. That partridge at which you aimed was not too far off: never was bird at a better distance. I was glad to see your barrels follow it in the air: but I desired a result; more was wanted; you should have finished by killing it.

You saw that covey of partridges which have just alighted in the clover: move on, take the wind, and as we walk listen to me. The covey are in force. The captain and lieutenant are at their head; that is to say, the old birds are there to direct the manoeuvres of the young ones. Let us commence with the former: once deprived of their leaders, the soldiers will disband; those fellows give them bad advice. Our dogs are about to stand: it is hot, and the birds will hold. At the commencement you will aim at the old bird which rises on your side. If you kill it, fire your second barrel at another; if not, another shot at him. Above all, do not fire at chance; aim well, do not be in a hurry, and fire. This is the time to show courage. Recruits are frightened at the first cannon shot.

The noise made by a covey of partridges rising at your feet has far more effect on the nerves. Do not laugh; you will soon tell me some news of them. I, with all my experience, am not even yet quite cool. My respiration becomes painful, and I always feel glad when the crisis is over. Walk on in silence.

Bravo! two birds at one shot, two partridges crossing one another, the point of meeting admirably seized. Young man, you may be satisfied. A bright future opens for you. I see an uninterrupted succession of well-filled game-bags. That shot shews me you will be a Sportsman. In such manner Bonaparte, before Toulon, announced to the world Napoleon of Ansterlitz.

Do not run to find your birds: allow your dog to do his work: it is his duty to bring them; it is his pleasure rather: look where the others have gone. Well! two in the sainfoin, one in the stubble, the remainder in the hedge-row. We will pay them a visit; each shall have his turn; they shall lose nothing by waiting.

Begin by the single bird. A partridge alone is a dead partridge. When they are in covey, some look out, others listen, and the fear of harm tells them of the harm they fear; they are off before the danger arrives. A single bird down does not move, but allows the dog to stand to it. You must understand, however, that such are among the number that have not already been fired at: when they have, they become more wary; nevertheless at all times a single bird is far more easy to kill than when in company.

After those which we have seen drop in the stubble, we will take a look for those in the clover, and thence to the hedge-row. In fact, we will follow them as long as any remain, or at least as long as we can find them on our own ground.

You have fired into the hedge-row; your dog seeks a fallen bird and finds it not; the partridge is not dead, but has only a broken wing, and he runs. He is incumbered, in which manner he often gets far away: you must then take your dog to the place where the game has fallen; let him scent the spot, saying to him, "seek, seek, bring it;" and the moment you are certain by his precipitate movements, that he is on right scent, let him do his work, and do not interrupt him. If you walk after him you may perhaps put up other game; and if you fire, the noise of your gun will bring back your dog, who will no longer listen to your voice.

Soon you will see him return all joy with a living bird in his mouth: then is the time to caress him, flatter him, and say pretty things to him; he will understand them well, and you will be repaid. His tongue is powerless I am aware, but his tail possesses an eloquence which many R.A.s may covet.

Yet if the ground is dry, the weather very hot, the nose of the dog has no longer that extreme nicety of smell which he possesses when the weather is fresh. The sun absorbs the scent of a partridge, and your game is lost; do not blame your dog: it is not his fault, he is more taken in than you.

There is still another way of finding your bird. When returning in the evening pass by the spot where you wounded it: it is probable he

may have rejoined his companions who are not far off. He is in their centre; each one tells of the fatigues and dangers they have encountered: his is the longest story, who has left several feathers of his wing in the battle, which he survived by flying.

Approach the covey; fire or do not fire: those who are well will be off, but the wounded one will remain: let your dog find him, he will soon be a prisoner.

On every occasion that I pass by a spot from which I have seen a covey of birds rise, I wait a moment, and cause my dog to hunt; and often, above all in the commencement of the season, I glean something. These are little profits which ought not to be neglected.

All that I have said in reference to partridge shooting applies to the quail, the hare, and the rabbit. The lesson resolves itself into this: place your gun well to the shoulder, take good aim, and fire without being in a hurry. In the chapters that we shall devote for each species of game, I will endeavour to explain all the modifications relative to firing under every circumstance.

An essential habit, which ought to be observed when one follows with the barrel as regards crossing game whether on the wing or running, is not to hesitate at the moment of firing, as neither a hare or a partridge will stop, and consequently you fire behind them. It is therefore necessary to accustom the hand to follow your game with a uniform movement: this is indispensable to become a good shot.

In shooting often you become a good shot—practice will soon accustom you to see a bird rise suddenly with coolness; you will no longer be in a hurry, and firing without hesitation your bird will fall into the jaws of your dog, without your being able to explain to yourself how such an operation was effected.

The prompt shot at game which gets up at a long distance in a wood is often very extraordinary; one has only a second or two to make ready and fire: a moment longer, and your object would have been out of sight. Very well! This calculation is made by the glance of the eye; your gun to the shoulder, the shot is fired and your bird dead. Practice has done all: your arm, your eye, your finger, have obeyed, you know not how or why. A mechanical movement has operated. This object you have achieved the moment you conceived it. When you desire to write a note, you write it; this appears simple enough. Nevertheless, how many thoughts are required to write this word! In the first place, thought must conceive it; the letters which compose it are presented in their natural order; you have written one after another, with their accents, their turns, their points, their apostrophes—all is done without calculation—mechanically, and the word is written.

There are those, to practise themselves in partridge shooting, who shoot owls in the day-time: it is a useless murder—murder, because the owl only does good in eating the millions of insects which devour us; useless, because you may shoot fifty owls following and miss all the partridges you find. That which constitutes a good sportsman is quickness of action: this promptitude, this certain glance of the eye, which causes him to seize the occasion in an hair's-breadth—the occasion once lost which may never again be found. The Romans represent it running on the edge of a razor and flying as a bird.

*Cursu volucris, pendens in novacula.*

They had reason: the partridge, the quail, all species of game resemble it. You must take advantage of the moment, once gone, never to return. In like manner can shooting owls be like that of game? They go, they come, they come again—a hundred times—a thousand—you take your time, your aim, you fire only when they are at the end of your gun. You select the moment, and this moment lost returns in a minute. You may have better practice by throwing up sparrows from your hand and firing at them in the air.

As with partridges you must select your time—and it will cause you no inconvenience to destroy a few of these really quarrelsome birds—but as regards the owl it is positively a crime to kill them.

Nevertheless a sportsman may hit many a sparrow and miss a partridge, though they show a better front. The noise which the latter make when rising astonishes and unnerves, and some time is required to accustom yourself to it; and we know that a young actor who plays well at rehearsals loses his head or forgets himself before a paying pit.

**A RAILWAY ANECDOTE.**—In a village in the neighbourhood of Lancaster is a knight of the thimble, who is in the habit of working at the office of his employers; and being sent for the other day to measure a farmer for a pair of "smalls," the conversation turned on the merits of a certain local interest. The farmer was anxious to know the nature of the embankments, viaducts, &c., and Snip being desirous of obliging him, as he was one of his best customers, took a piece of chalk, and drew on the cloth intended for the "smalls," a fac-simile of the undertaking, which, with the aid of a little oral explanation, completely satisfied the querist, who then went to look after his labourers. And now comes the cream of the affair. The tailor, to make up for lost time, plied his shears with unwonted energy, but railway matters being uppermost in his mind, instead of the "unmentionables" having a grand trunk and two small parallel lines, he cut a communication from one end of the cloth to the other, and did not discover that he had followed the chalk marks denoting the "rail" until it was too late to rectify the blunder.—*Liverpool Courier.*

## NOTICE!

THE PROPRIETORS, in consequence of the unexpected demand, have found themselves under the necessity of reprinting THE ALMANACK and with it NUMBER 28 of THE MAGAZINE which they will still continue to keep on sale for a few weeks, at the price of THREEPENCE together.

N.B.—This is done in order to keep faith with many Subscribers, who have failed in procuring their numbers owing to the increased demand. The Almanack may also be had, strained on linen, varnished, and with neat roller, for suspending in Parlours, &c. Price 2s. 6d. each.

\*\*\* On Thursday, Dec. 11th, will be published, Number 1, of a ROMANCE OF REAL LIFE, entitled LIFE IN LONDON. By J. Herbert Thorneley, Esq. Embellished with first-rate engravings, and printed upon a large royal paper of excellent quality. Numbers One Penny each. Monthly Parts, in embellished wrapper, price 6d. E. DIPPLE, Holywell Street, and all Booksellers.

## CORRESPONDENTS.

- A. W. C. will see we have turned to trolling in the present number.
- J. C. H.—Send us the name of the News-vender in the Gray's Inn-road. It is an extortion; the same price, three half-pence (minus the trade reduction) was charged for each of the Almanacks delivered with No. 28. The Almanack at 14d. (without the paper, of which we desired thereby to extend the circulation) would be a dead loss to us; as we charged but 8d. (with the regular allowance deducted) the News-vender who asked sixpence, and pointed to the price thereon, practised an imposition. Call there again, show him this, and if he persists, we will see whether a line or two of capitals over our leader will not shame him into fair dealing.
- H. S. Derby.—We have heard of turkeys of the weight mentioned (30lbs.); we received one ourselves from Diss, in Norfolk, a few years since, weighing 28lbs. We should therefore say that 30lbs., though an extraordinary weight, has been many times reached. Ask some wholesale poulterer.
- J. TERRAIL, Glasgow.—Vermín in the dog (if you mean ticks or lice) may be destroyed by rubbing the whole animal over with train-oil; allow it to remain on half an hour, then wash it off with salt of tartar, or potash and water. Soft soap made into thick paste, and rubbed over the body, and allowed to remain on an hour, will also effectually destroy them. If fleas are the plague, the only effectual remedy I have met with, is the simple one of making the dog sleep on fresh yellow deal shavings. You may make these shavings so fine as to be as soft as any bed, and if changed every fortnight or so, they make a very cleanly and comfortable resting place for the animal: the turpentine is very obnoxious to fleas. Where it is impracticable to procure deal shavings, rub or dredge the dog's hide once a week with finely powdered resin; if you prefer rubbing it in add some bran.
- A. HORSEKEEPER.—Turpentine (four kinds—the Chian, Strasburg, Venice, and common, or Canada) all owe their efficacy to one principle. They are diuretic and carminative. Common (or horse turpentine) comes from the *Pinus sylvestris*, known to us as the Scotch fir. Venice turpentine is made up by mixing common turpentine (melted) with a little oil. The oil of turpentine, or *spirit of turpentine*, as it is commonly called, is obtained by distillation from the gum or resin. Mixed with mustard you will find the oil a good embrocation for counteringacting internal inflammation. The preparations of opium are much more effectual than turpentine in gripes, colic, or fret; but they require caution in administering them. The following is the mode of preparing it:—  
Opium, 1lb., softened with hot water until it forms a thin paste, and is free from lumps. Then add,  
Powdered ginger ..... 3oz.  
Caraways ..... 6oz.  
Allspice ..... 6oz.  
Treacle ..... 1lb.  
Mix all well, and keep in a covered jar or pot. Dose about a 30th part of the mass. Mixed with a little warm beer, or infusion of pepper-mint, it is capital in windy colic, and a famous cordial for griped cattle.
- T. C., Commercial-road.—You say the disorder is the PIP, but you do not describe it. Does the disorder manifest itself by a white skin or scale growing on the tip of the tongue? If so, "tear off the skin with your nail, and rub the tongue with common salt." We never saw the disorder yet. Drop us another line describing the symptoms; and if, as we suspect, the disorder is *roup*, *flux*, or *constipation*, we will give you our best advice. See if there is any imposthume or gathering near the rump. If so, it must be punctured; the core pressed out, the wound washed with salt and water, and the hen put on good solid food, with scalded bran or pollard mixed with pot liquor, and a little brimstone, if needful. Don't forget dry sand and ashes for the fowls to roll in.
- S. SANDERS.—THE FIFTH PERIOD OF THE HISTORY OF BOXING, now appearing in these columns, will include the battles of Spring, Painter, Tom Oliver, Jem Ward, Peter Crawley, Ned Neale, Jem Burn, Ned Baldwin, &c. among the big uns; Jack Randall, Ned Turner, Peace Inglis, Alec Reid, Young Dutch Sam, &c. among the middle weights; Dick Curtis, Barney Aaron, Jack Tisdale, &c. among the light. THE SIXTH PERIOD will comprise the boxers who shone from 1830–1846, including Owen Swift, Hannan, Maley, Ned Adams, Parker, Bendigo, Caunt, &c., &c., &c.
- A. COUNTRY COUSIN.—The Sweeps at Mr. Turpin's, the Old Essex Serpent, Covent Garden, are well managed; Mr. Rees, the secretary, obliging; and the responsibility of the trusteeship unquestionable. What more can you desire in the way of recommendation?
- WM. RADCLIFFE, Oldham.—If your newsmen or yourself will order them through Mr. Abel Heywood, Manchester, he will procure them, if he has them not. All the back numbers are in print, except No. 18, of which only the stamped edition (containing the Championship fight) is procurable.
- H. W. K.—The rules laid down by Captain Barclay for training would be too severe for any man, who pursues business avocations, to adhere to. The little MANUAL OF PEDERASTIANISM AND WRESTLING, (written by the Editor of this paper), and BRITISH BOXING, (a handbook of the same form and price), both published by Mr. W. M. Clark, in Warwick-lane, contain all you require. Stick to training, and practise the evolutions therein described; hold up your head and fear not. The other questions will require us to make an enquiry or two ourselves.
- A. Z., Doctors' Commons.—If you drew Vanguard, and the Sweep was for the Newport Pagnell STEEPLE Chase, it is a direct fraud. Not having seen the articles or the card or tickets by which it was decided, we of course answer on your expert statement. There is one point clear that if Vanguard was in the draw, Pedler could not be the winner, as the two horses were not in the same race.
- A. NOVER.—The person purchasing a throw at a raffle, if he wins, must pay the money agreed to be spent. It is amoying to be obliged to answer the same question over and over again.
- SIMON S.—O.—In a trotting match in harness, the rule is, if a horse breaks into a gallop, that the driver must pull up, and back his wheels, and then go on. In saddle, the horse must be turned round.
- EMERITUS.—Hambletonian and Diamond ran their match on the 25th March, 1780.

R. D.—Hannmer Lane fought Sullivan after he fought Molnoux.

N. B.—The Editor of "the Era," is "Vates;" argal, as Touchstone would say, "Vate is the Editor of the Era." That gentleman is *nulli secundus* on every matter relating to the TURF; put your questions to him, and doubtless you will find he is as communicative as he is well-informed.

W. P. BOROUGH.—We have the book before us, but cannot tell the publishing price; however, we will enquire, and give you the benefit of the enquiry next week.

M. R. W.—The Deaf 'un died January 8, 1845.

S. L. B.—The century is not ended until the 100th year is complete; thus 1800 is the last year of the 18th century not the first of the 19th. In common talk we consider 1800 as the first year of the present century, but it is an error.

## OUR WEEKLY CALENDAR.

SUNDAY, Dec. 7th.—SECOND SUNDAY IN ADVENT.—Napoleon's remains arrived at Havre, 1840.

MONDAY, 8th.—Newmarket Champion Coursing Meeting.—Nottingham Coursing Meeting (and 10th).—Mary Queen of Scots born 1542.

TUESDAY, 9th.—Mountaintown Coursing Meeting.—Great Panic of 1825 commenced.—Domestic Hints.—Exportation of Brides.—Mothers with a multitude of daughters should divide the favours of their family fairly between their native country and the colonies. Thus those daughters who are blessed with aquiline and raven tresses will be found admirably adapted for Home consumption, whilst saubs and doubtful nuburns should be devoted to the Indian market. N.B.—Squints will do for Canada.

WEDNESDAY, 10th.—Black-game, Partridge, and Grouse shooting end.—Glossop (Howard Town) Coursing Meeting.—Day breaks, 5 h. 51 min.—Mehemet Ali submits himself unconditionally to the Four Powers 1840.

THURSDAY, 11th.—Tarlton Coursing Meeting (and 10th).—Awful slaughter of the British troops in Afghanistan, 1500 lives lost, 1842.

FRIDAY, 12th.—Bill proposed to put the Militia on a better footing. Better footing! try ankle-jacks, and let them be well welled.

## DECEMBER.

Season of social mirth! of fire-side joys!  
I love thy shorten'd day, when, at its close,  
The blazing tapers, on the jovial board  
Dispense o'er care-forgetting face  
Their cheering light, and round the bottle glides;  
Now far be banish'd, from our social ring,  
The party wrangle fierce, the argument  
Deep, learned, metaphysical, and dull,  
Oft dropt, as oft again renewed, endless:  
Rather I'd hear stories twice ten times told,  
Or rapid joke, fitch'd from Joe Miller's page,  
Or tale of ghost, hobgoblin dire, or witch;  
Nor would I, with a proud fastidious frown,  
Proscribe the laugh-provoking pun: absurd  
Though't be, far-fetch'd, and hard to be discern'd,  
It serves the purpose, if it shake our sides.

SATURDAY, 13th.—Dr. Samuel Johnson died, 1784.—"Lucy," is opposite to this day in the Stationers' Almanack: was she any relation to the lubly lady whose family name was Long?

## THE MOON IN DECEMBER.

First Quarter, 6th .. .. .	2 52 morn.
Full Moon, 13th .. .. .	6 43 after.
Last Quarter, 21st .. .. .	11 27 after.
New Moon, 29th .. .. .	10 63 after.

## TIDE TABLE FOR THE WEEK.

Wednesday, 10th	..	11 31	—								

## The Sportsman's Magazine.

## A FEW MORE WORDS ABOUT OUR STAMPED EDITION.

WHEN first we announced a stamped edition of the SPORTSMAN'S MAGAZINE (see page 267, No. 13) we observed, "as the outlay for the stamp only is charged, no more stamps will be printed than are previously ordered; all subscribers therefore desirous of obtaining the stamped edition, must order it in advance, or by forwarding an address and three shillings, in stamps or a money order, will have the paper forwarded direct by Thursday's post," for twelve weeks. The receipt of numerous letters within the past few days, shows us the necessity of repeating this notice. True, in the instance of No. 18, (the fight for the CHAMPIONSHIP) we made an exception to the rule, and assuming that the demand would continue, printed off a number extra for stock; yet many persons who in different parts of the country have ordered the stamped edition of last week, must of necessity be disappointed. The fact is, we printed twice our usual number, yet in vain—for no sooner was the type broken up than orders poured in, but too late!—Therefore we pray you, kind purchasers, whenever any important sporting event comes off, do not think our standing notice of "GIVE YOUR ORDERS EARLY," a mere trading phrase. Remember we print on Wednesday night and Thursday morning, an edition containing every important mill or great sporting event of the previous Tuesday; and that, if the orders only arrive on the Friday, Saturday, or even the Monday following, that you have yourselves to blame, if you are disappointed in receiving them. Again we repeat, when we have a special report, "Give your orders early!"

## GALLERY OF SPORTING CELEBRITIES.—NO. VI.

LORD DRUMLANRIG.

Archibald William Douglas, Viscount Drumlanrig, and heir-apparent to the Marquisate of Queensberry, is too spirited a specimen of our sporting aristocracy to pass without a niche in our Gallery of Celebrities. Yet it is not for that his ancestor, the first Lord Drumlanrig, entertained King James the First of pedantic memory—nor that another of them shines in the page of history, as an eminent statesman; nor that the name of Douglas bears with it the glory of historic associations, the echo of the war-trumpet, or the blazoned achievements of a long ancestral line—that his “counterfeit presentment” is transferred to the columns of the *SPORTSMAN'S MAGAZINE*. Sir Walter Scott has said in the preface to *Waverley*, that “the heroic bosom beats as proudly beneath the white-silk waistcoat of the nineteenth century, as beneath the mailed plate of the fourteenth;” and a fox-hunt, a steeple-chase, or a fair stand-up mill in a well-kept twenty-four foot, has not a more ardent patron than Lord Drumlanrig. We shall not here enumerate his exploits across country; they are numerous and recorded. His lordship is a Captain in the second regiment of Life Guards, a sportsman *sans tache*, an ardent patron of the ring (see his letter in number 20, p. 354 of this *MAGAZINE*), and a gentleman in the best sense of the word. He is at present enjoying the blue sky of Florence, and the breezes from the “yellow Arno;” may he return with an increased admiration for the manly sports of his native Britain!

We may observe in conclusion, that the drawing from which the above engraving was made was taken during the year 1843, while his lordship was officiating as referee; an office which we hope yet to see him many times fulfil, despite the declarations of the letter already referred to.

## ANOTHER HINT TO HORSE BUYERS.

SIR,—In No. 28 of your valuable miscellany I gave a few hints on the purchasing of horses from dealers. Since writing that letter I have obtained more information on the subject, which you would greatly oblige me by submitting to your readers.

Among the greatest impositions practised upon the young buyer,

stands prominently the “changing” system. This is effected as follows:—The purchaser is ushered into stalls, in most of which are displayed very good horses; he picks out one that suits his fancy, a moderate price for such a horse is asked. The dealer then requests him to step into his counting-house to arrange the purchase. While the buyer is away, a strange scene is going on in the stable; paint, another horse, and other accessories for the transformation, is busily at work, and by the time the purchaser again enters the stable, the other horse is rendered the facsimile of the original purchase, and the buyer goes away with a defective animal not worth one half of the purchase money.

To obviate this deception as much as possible, it will be best for the purchaser, if he has any suspicions of foul play, to stop in the stable and transact his business *there* without leaving it.

Another practice, which these gentry are very fond of, is to give a receipt on *unstamped* paper. A cause of this description was tried in the Court of Exchequer within the last six months. My advice is, to examine everything minutely before they leave the house or stable of the dealer.

There is a close resemblance in horse-dealing to the principal circumstances of the late Railway mania. In fact the staggering system seems as much at work among the horse dealers as the Railways. As an example of the truth of which, I will cite the following example, which, with the exception of fictitious names, is perfectly true.

## COURT OF QUEEN'S BENCH.

*Before Sir J. T. Coleridge,*

*GREEN v. BROWN.*

This was a case in which the plaintiff, J. Green, Esq., on the 1st of April, 1845, agreed to purchase a bay mare, of the stated age of three years and a half, and which was highly recommended to him, at the time he agreed to purchase, by four gentlemen, one of whom stated himself to be a veterinary surgeon, and the rest as well acquainted with the turf. The plaintiff, on the excellent recommendations of the above gentlemen, consented to purchase the horse, for which he paid the defendant, Brown, in the presence of the aforesaid gentlemen, the sum of 230*l.*, and 2*l.* for keeping the said mare in his, defendant's, charge for the space of one fortnight, until the plaintiff should be ready to take him from the charge of the defendant. After the lapse of the fortnight the plaintiff caused the mare to be removed from the defendant's stables; when, from some suspicions that he conceived, he caused the mare to be examined by an experienced veterinary surgeon, who pronounced her to be positively defective in wind and limb. On this count the plaintiff brought his action for the recovery of the said 230*l.*, and the said 2*l.*

Judgment was then returned for the plaintiff for the sum of 250*l.*

From this report the buyer will learn a most important rule, never to trust to the representations made to him in a dealer's house or stables, for he may be well-assured that they are *all* interested parties who make them.

I have thrown these few hints into the form of a letter; and I hope that the reader will excuse any errors he may perceive, which, if there are any, I will notice in my next communication, which will appear in an early number.

F. B. T.

THE GAME-LAWS.—Captain J. Forbes, deputy-lieutenant and magistrate for Berks, has published a letter, from which we make the following extract:—“What a singular fiction it is that we live in a free country where property is secure! I am subjected to a scourge more oppressive than the tread of Attila's horse-shoe. My case (by no means a solitary one of its kind in these parts, and one which the law in its present state will not redress) is simply as follows; I am a freeholder living in the neighbourhood of a mighty Nimrod's game preserves, the effects of which this year (nearly a repetition of last and others preceding), are that I have been obliged to plough up and entirely recultivate twenty-six acres, originally planted with wheat, five with beans, and to dibble in beans in other land where the wheat was destroyed, which also, together with the rest of crops, were ruinously damaged. This is a year of scarcity. My land being in the highest state of farming would yield in ordinary seasons a load of wheat to the acre. Now at the average of one quarter, or eight bushels, per annum per man (which I believe fair) in this year of scarcity, the bread of so many human beings is destroyed on one farm, not to mention other produce, and this solely for the amusement of the leisure hours of a powerful neighbour. This state of things I have respectfully, feelingly, and repeatedly represented as a proper case for compensation, and am told to protect myself. Protect myself, forsooth! During the season the destruction is going on, the law forbids me. I could walk through my standing corn with infinitely less damage to it than the game inflicts, and to a certain extent lessen the nuisance, but by the time the law allows my taking any steps, the mischief is done, the miserable remnants of the crops are removed, the land is left covered with weeds, requiring much expense and labour to clear away, the game and rabbits get back to the preserves, and then, but not till then, are fed by the proprietor, who reaps the whole benefit by the new system of *baitues*, free from tithes, rates, or any other burden which I am left to bear. I think you will agree with me, that with our increasing population, and the severe competition farmers are exposed to in the market, it is high time to expunge the Game-laws from the statute-book, or at least in common honesty to award compensation to parties so ruinously visited.”

JOHN PALMER,  
BETTER KNOWN AS JACK SCROGGINS.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

### CHAPTER XI.

#### JACK SCROGGINS, THE SAILOR.

**O** whom the hardy little hero, whose figure-head forms the frontispiece, was indebted for the somewhat grotesque alias by which he is best known, is a point on which history is silent: nor, if it could be cleared up would it be a feather, even in the cap of one of these laborious investigators of bygone nothings, the fellows of the Archaeological Association. 'Twill be enough for the readers of this history to know that although his name was Palmer, we prefer adhering to his ring-cognomen of JACK SCROGGINS, the appellation beneath which he so often achieved victory.

John Palmer was born, December 31, 1787, near New-cross, Deptford. It should seem, that as Hercules in his cradle betook himself to serpent-strangling by way of prefiguring his future monster-destroying propensities, so Jack was pugilistic from his cradle; and although not an ill-natured lad, was continually fighting the boys of New-cross, till his victories were so numerous, that he was considered as the cock of the walk. At a more advanced age, he went to live as a servant on the farm of Mr. Giblett, (the great butcher of Bond-street,) at Kilburn. Here he had frequent turns-up with the hardy race of navigators belonging to the Paddington-canal, and here he first received the name of "SCROGGINS," which continued with him throughout his services in the Navy, and stuck to him to the end of his boxing career. The oddity of this nickname was merited by a corresponding *grotesquerie* of personal gesture and appearance. In height only five feet four inches, in weight hard upon 11 stone, "his appearance when stripped," says Boxiana, "is not unlike the stump of a large tree, and from his loins upwards he looks like a man of fourteen stone." Add to this, much native humour, the antics of a merryman, undaunted courage, and a love of riotous fun, and the reader will admit that the comic lyric poet of *Bell's Life in London*, could not have chosen a better known or more comic public character than "Ould Jack," or—after his departure for another world of spirits beyond the grave—"Ould Jack's Ghost," for the vehicle of his FANCY facetiæ.

In May, 1803, when sixteen years old, he was ill-treated by one Bill Walters, at the sign of the Waggon and Horses, at Brentford. Walters was a full grown man, possessing strength and some knowledge of milling, but Jack was not easily to be intimidated, and an immediate turn-up was the result, in a field near the above inn. The battle continued upwards of an hour, when Scroggy was proclaimed the victor. Jem Belcher witnessed the mill, and praised Scroggy for the hardy courage he displayed.

Not long after the above circumstance, Scroggins dined at a club-feast, at the sign of the Swan, Sunbury-common. The harmony of the company experienced great interruption from the improper conduct of a fellow called Sam Beak, better known as the "Bully of Harrow." His name was a sort of terror to all present, and the company would have been compelled to endure his insolence for the remainder of the evening, had it not been for the *pluck* of little Scroggy, who insisted upon his quitting the room. This threat produced a regular fight out of doors, and, after a severe battle for nearly an hour, Beak was glad to give in.

Scroggins also fought a brick-maker, weighing thirteen stone, near the sign of the Fox and Goose, at Appleton, near Harrow-on-the-Hill. It was thought by the spectators, from the great disproportion between the combatants, that little Scroggy must ultimately be annihilated; but the smashing activity of Jack soon reduced the brickmaker to his own pitch, when he finished him off in quick time.

A navigator, known by the appellation of Long Will, fought with Scroggins, near Harrow. It was a desperate battle, and contested with alternate success for a long time, till victory crowned the exertions of our little hero.

At Cowley, near Uxbridge, Scroggins entered the lists with Burke Smith, denominated the second Robin Hood, from his attachment to deer; a man of great activity, and distinguished for his great jumps over the canal. In the hands of Scroggins he was soon glad to acknowledge he was defeated.

Billy Lee, the gipsy, had a desperate set-to with Scroggins, at Kilburn, in the year 1804. The bruising qualities of the Gipsy were

well known in the neighbourhood of Paddington; but Scroggins not only nobbed him severely, but also punished his body in such a hammering style, that he hastily relinquished the contest, acknowledging the superiority and goodness of our hero.

By moonlight, at Kilburn, between twelve and one o'clock, on a Friday night, a chap of the name of Blinks, otherwise designated as "No Nose!" had a turn-up with Scroggins, but the severity, "No Nose" met with, in the course of a few rounds, induced him to give in. Upon being shown Scroggins the next day, he said he was not the same he fought with, but would fight him for the whole of his week's wages on the next Sunday morning; but, when the time arrived, "No Nose!" was not to be found.

A strong athletic farmer's man, of the name of Bill King, was also beaten by Scroggins, at Sandford-green, near Harrow.

At Appleton, after a very severe battle, Jack Matney surrendered to the conquering arm of Scroggins.

It was owing to the following circumstance, that our hero was compelled to leave milling on land, to fight the battles of his country at sea, by entering into the Navy. In a row, with one Ellis, a constable, at Sandford-green, the representative of the law, it appears, felt rather heavily the indignation of Scroggins. In consequence of which turn-up, an application was made to the magistrate, (Dr. Glasse,) when our hero was depicted in such terrible colours, that a press-gang of seventeen were considered necessary to convey him in safety out of the neighbourhood.

On the Point-beach, at Portsmouth, Happy Jack, the terror of that then notorious sea-port, (so termed from the numerous conquests he had obtained over various Jack Tars,) was, in the presence of some thousands, woefully cut down from the severe punishment he received in combat with Scroggins. Happy Jack, for once in his life, being miserable by defeat.

During the time Scroggins was on board the *Argo*, the ship was a scene of milling adventures; and, it should seem, when off duty, his leisure was filled up in boxing.

Before our hero was suffered to realise the title of the Champion of the *Argo*, the best men in the ship were pitted against him; but it would be beneath the dignity of our History to record the undistinguished names of the mere commoners who fell beneath the conquering arm of Scroggy, who notwithstanding his pugilistic penchant was the life and soul of the ship, and as remarkable for his readiness to assist a weaker messmate, as to promote the general mirth of the crew. His practical jokes and general good humour were long the standing talk of the *Argo's* galley. Toogood, a man of colour, of first-rate weight, and possessing prodigious strength, had a regular battle with our hero, on board the *Argo*. Notwithstanding his athletic powers, Scroggins compelled him to strike his colours.

A caulker, a tall, strong, bony man, who came on board the *Argo* to make some repairs, presuming on his strength, took off the boiler and placed his frying-pan on the fire, in defiance of the whole mess. Scroggins at length appeared and took the fellow's frying-pan from off the fire. A fight was the immediate consequence; but the caulker was so often flogged, met with such severe punishment, and was so chaffed by the whole ship's crew, that out of revenge he complained to the captain of Scroggins; and our hero was compelled to stand and take two dozen lashes, or, what is called in the sea-phrase, a *dry holy-stoning*!

Scroggins had scarcely set his foot on *terra firma*, when he had a turn-up with two dragoons, before the door of the Prince of Wales, at Woolwich; notwithstanding the heavy force Scroggins had to contend against, our little hero bustled through it with so much true courage, that in the course of a few minutes he came off triumphant, having flogged both the soldiers with apparent ease.

Scroggins' first battle in the ring, after his return from sea, was with Jack Boots, (whose real name was Wilford), at Wilnden-green, in 1814, for one guinea a-side. It was a fight without training, and took place entirely from accident. Boots, it seems, had previously talked about fighting our hero, and both of them meeting at the above place to partake of the diversion afforded by Caleb Baldwin's bull, they instantly agreed to decide the dispute in question, upon Scroggins' observing to Boots, "that he thought they were as capable of amusing the amateurs as the bull had done!" In consequence of this agreement the sports of the day closed, unexpectedly, with a regular mill. Upon the bull's quitting the ground, a ring was immediately formed, and Scroggins and Boots, without further preface, set-to. The latter was well-known, from having fought several battles; but Scroggins was a complete stranger to the fighting circles. It was a punishing mill for sixty minutes, during which period the pantomimic tricks exhibited by Scroggins occasioned roars of laughter; he, however, displayed all the fortitude of a sailor bent on obtaining victory. Anything like a regular system of tactics he appeared to despise, and scrambled his way in to mill his adversary; but, notwithstanding this sort of non-descript boxing, his hits were so tremendously sent home, that Boots could not resist their desperate effects. The friends of Boots perceiving that he must eventually lose, were about resorting to some manoeuvres to prevent Scroggy from being proclaimed the conqueror. This conduct was observed by old Joe Ward, who was standing in a cart viewing the battle; and although he was severely

afflicted with the rheumatism in both knees, he hastily jumped out, and made for the ring, where he insisted upon fair play being observed between the combatants. Scroggins was, ultimately, declared the victor. The spirited conduct of the latter so pleased the amateurs, that four pounds were collected for him, as a reward for his exertions.

The friends of Scroggins, not without reason, thought, from this specimen men, that there was good stuff in him. Accordingly, Dolly Smith was selected as a game active boxer, and as a good trial man for our hero. The battle was contested at Combe-warren, on Wednesday, January 11th, 1815, in a twenty-feet roped ring, for twenty guineas a-side. Smith was seconded by Bill Cropley; Scroggins was attended by Richmond and Oliver.

Smith was well known as a boxer, and considered a good man, from his game battle with Dick Hares, the previous year, on the same ground, while Scroggins was scarcely known to any person connected with the ring. He was viewed by the amateurs as an ambitious adventurer, a rough and daring commoner, opposed to science and experience; the betting was, in consequence, 5 to 4 upon Smith. The combatants in point of weight were nearly equal. The first round proved a good specimen of the whole fight; but the impetuosity of the "hardy tar" was so overwhelming, that the science of Smith, however well applied, could not prevent its conquering effects. Scroggins' singular mode of attack astonished the spectators. Immediately on receiving a hit from his opponent, he went resolutely in to mill, protecting his head with his left hand over it, like a ship running in to attack a fort or shore battery, dealing out terrible punishment with his right hand; and thus took the lead and kept it, although he was opposed in the most manly and skilful style by Smith, who was not long in darkening one of the peepers of the sailor. Scroggins fought at the body with great ferocity; and had the advantage in a striking degree in throwing, Smith experiencing some severe cross-buttocking, and desperate falls. The latter was frequently out of distance, and hit over instead of punishing his adversary's nob. It was a most determined battle on both sides, and Smith did not disgrace his character in defeat. The blows of Scroggins were terrible, and he was never off his pins but once during the battle. For three-quarters of an hour it was rattling hard fighting, at the end of which time Smith was so severely beaten about the head and body, that he was compelled to cry "enough."

The milling fame which Nosworthy had acquired by his conquest of the renowned Dutch Sam, at Moulsey, on the 8th of Dec., 1814, rendered him an object of no small attraction in the milling sphere. Scroggins, it seems, was eager to make a dash; his ambition soared above commoners, and he viewed the victorious baker as a competitor worthy of his aspirations. Some little time, however, elapsed before he was accommodated; at last they met on the 6th of June, 1815, at Moulsey-hurst, for fifty pounds a-side. Belcher and Gibbons seconded Scroggins; Oribb and Clark picked up Nosworthy. The patrons of pugilism mustered very strongly upon this occasion, and the *crusty-coves* of the metropolis felt so confident the Master of the Rolls would gain the cause, that, the evening previous to the fight, they laid the odds of 5 to 4 with cheerfulness and alacrity. Nosworthy had won his late battle so apparently easy, that no doubt was entertained by his admirers as to the issue of the battle. At one the men set-to.

#### THE FIGHT.

Round 1. The notoriety Nosworthy had obtained in conquering the Jew phenomenon created considerable interest, and every eye was upon the stretch on the combatants setting to. A short time elapsed in sparring, when Scroggins made a good hit; the baker, in return, missed his aim. Some heavy milling occurred, when they closed, and both went down. Nosworthy undermost, Scroggins heavily on him. (5 to 4 on Scroggins already).

2. Nosworthy appeared bleeding at the scratch. Determined fighting was the order of this round; and both the men seemed bent upon proving each other's courage. Hit for hit was returned with as much indifference as if their bodies were insensible; and, although both of them were frequently hit away, they returned to the attack like lions. The rally was dreadful; Nosworthy was at length sent down.

3. It was evident to the spectators that Nosworthy had got his work to do to make a win of it. No flinching on either side; the men stood up to each other like a couple of thorough bred bull dogs. Scroggins took the lead in gallant style, and punished his opponent in the most terrific manner; planting a hit under Nosworthy's ear so powerfully, that he went down in a twinkling. (Nosworthy's leading position was at an end, and 2 to 1 was offered on Scroggins, without the least hesitation.)

4. The game displayed by Nosworthy was astonishing; but he had received so plentifully that his strength was considerably reduced. Another terrific rally occurred, in which the superiority of Scroggins was manifest to all parts of the ring; he milled his adversary completely before him till he went down. (3 to 1 on Scroggins.)

5. Nosworthy fought like a man, but the chance was decidedly against him. Scroggins had it all his own way in this round, and planted his hits with all the confidence and judgment of a first-rate fighter.

6. Upon setting-to, Scroggins, with much severity, flogged his antagonist. (Great applause.)

7. Nosworthy, notwithstanding the punishment he had sustained, came to the scratch full of pluck, and made a desperate effort to effect a change in his favour. He, with much dexterity, put in a tremendous blow upon one of Scroggins's eye-lids; but the latter returned upon him severely, and had the best of the round.

8. The head of Neworthy seemed an easy mark for Scroggins, who peppered it with the utmost sang froid. The baker again floored. - 9 to 15, and last. The courage of Neworthy was the admiration of the ring; he continued to fight till not a shadow of chance remained. He was so severely beaten in the fifteenth round, that, on time being called, he was unable to quit the knee of his second. The battle was over in eighteen minutes.

(To be continued.)

## THE FISHER'S CREEL.

### A SAY ABOUT TROLLING AND WINTER ANGLING.

**OP**PORTUNANCE at this dreary season, with the exception of the voracious tyrant of the stream, little can be said of the patient practices of Piscator. Yet moved thereto by some half a dozen staunch correspondents, who "prick the sides of our intent" to give them a "screed o' wridin'" anent and concerning Trolling and Pike fishing generally, we take pen in hand.

Blaine says, "In October the sun of the fisherman's joys is fast setting, and unless he be near a grayling river, or a trolling water, he is little more than cheered by the perspective of a new era and another dawn. The weeds are fast decomposing, and as the fish shun the rotting mass, the holes and hollows to which they retire offer the only hope of success. Here with well mixed paste the roach and dace angler sits secluded, and watches the minute spot of his tip-capped float, as it slowly accompanies the heavy current. In November trout are seldom taken with the fly; but in favourable weather grayling, particular the smaller ones, will still rise at the artificial duns. Chub fishing, with bullock's brains and prepared greaves, may now be pursued; and roach fishing is still good in the deep places with winter gentles, or well made pastes, and may continue both this month, and the next if the weather continue open."

Hence though next week we will say a few words on winter-fishing generally, we certainly laid aside this heading of the "FISHER'S CREEL" until genial spring should give token of the reawakening of the vegetable and insect world; nevertheless for the reasons above-mentioned, do we quit our hibernating torpidity, and proceed to "handle a pike" in the piscatory department of the SPORTSMAN'S MAGAZINE.

The Pike (formerly called a Luce) is known by the name of a Jack until it is twenty-four inches long. Though now a well-known inhabitant of the principal rivers and lakes of Europe; and although probably an introduced fish in this country, and for a long time rare, it is exceedingly common in many of our rivers, and in almost all the lakes and large ornamental waters of England, Scotland, and Ireland.

That Pike were rare formerly, may be inferred from the fact that, in the latter part of the thirteenth century, Edward the First, who condescended to regulate the prices of the different sorts of fish then brought to market, that his subjects might not be left to the mercy of the venders, fixed the value of Pike higher than that of fresh salmon, and more than ten times greater than that of the best turbot or cod. In proof of the estimation in which Pike were held in the reign of Edward the Third, we refer to the lines of Chaucer;

("Full many a fair partrich hadde he in mewe,  
And many a Brems and many a Luce in stewe.")

Pikes are mentioned in an act of the sixth year of the reign of Richard the Second, 1382, which relates to the forestalling of fish. Pike were dressed in the year 1468, at the great feast given by George Nevil, Archbishop of York. They also find a place in the famous "Boke of St. Albans," in the treatise on the art of fishing with an angle; the first edition of which is said to have been printed at St. Albans in 1481, and again at Westminster, by Wyakyn de Worde, in 1496. Pike were so rare in the reign of Henry the Eighth, that a large one sold for double the price of a house-lamb in February, and a Pickerill, or small Pike, for more than a fat capon!

The Pike is strong, fierce, and active; swims rapidly, and occasionally darts along with the rapidity of lightning. The spawn is deposited among weeds in March, or early in April; and at this season the spawning fish will be found in narrow creeks or ditches that are connected with the larger waters they at other times inhabit.

Pliny considered the Pike as the longest lived, and likely to attain the largest size of any fresh water fish. Pennant refers to one that was ninety years old; but Gesner relates that, in the year 1497 a pike was taken at Halibum in Suabia, with a brazen ring attached to it, on which were these words in Greek characters:—"I am the fish which was first of all put into this lake by the hands of the Governor of the Universe, Frederick the Second, the 5th of October, 1230." This fish was therefore two-hundred and sixty seven years old, and was said to have weighed three hundred and fifty pounds. The skeleton, nineteen feet in length, was long preserved at Manheim as a great curiosity in natural history. The lakes of Scotland have produced Pike of fifty-five pounds weight; and some of the Irish lakes are said to have afforded pike of seventy pounds; but it is observed, says honest Isaac Walton, "that such old or very great pikes have in them more of state than goodness; the smaller

or middle size pike being, by the most and choicest palates, observed to be the best meat." The flesh of the pike is of good quality; and those of the Medway, when feeding on the smelt, acquire excellent condition, with peculiarly fine flavour. In Lapland, and some other northern countries of Europe, large quantities of pike are caught during the spawning season, being then most easily taken, and are dried for future use.

Among the various localities in England remarkable for the quality as well as the quantity of their pike, Horsea Mere and Heigham Sounds, two large pieces of water in the county of Norfolk, a few miles north of Yarmouth, have been long celebrated. Camden, in his 'Britannia,' first printed in 1586, says, "Horsey pike, none like"; and Horsea pike still preserve their former good character. We have been favoured by a gentleman of acknowledged celebrity in field sports, with the returns of four day's pike fishing with trimmers—or liggers, as they are provincially termed—in March 1834, in the waters just named; viz. on the 11th at Heigham Sounds, sixty pike, the weight altogether two hundred and eighty pounds; on the 13th at Horsea Mere, eighty-nine pike, three hundred and seventy-nine pounds; on the 18th again at Horsea Mere, forty-nine pike, two hundred and thirteen pounds; on the 19th, at Heigham Sounds, fifty-eight pike, two hundred and sixty-three pounds; together, four day's sport, producing two hundred and fifty-six pike, weighing altogether eleven hundred and thirty five pounds. Pike have been killed in Horsea Mere, weighing from twenty-eight to thirty-four pounds each. These meres, or broads, as they are called in Norfolk are of great extent. Horsea Mere, and Heigham Sounds, with the waters connected, are calculated to include a surface of six hundred acres.

As the mode of fishing for pike with liggers on these extensive waters is considered to be peculiar, and affords great diversion, we may state that the ligger, or trimmer, is a long cylindrical float, made of wood or cork, or rushes tied together at each end; to the middle of this float a string is fixed, in length from eight to fifteen feet; this string is wound round the float, except two or three feet, when the trimmer is to be put into the water, and slightly fixed by a notch in the wood or cork, or by putting it between the ends of the rushes. The bait is fixed on the hook, and the hook fastened to the end of the pendant string, and the whole dropped into the water. By this arrangement the bait floats at any required depth, which should have some reference to the temperature of the season; pike swimming near the surface in fine warm weather, and deeper when it is colder, but generally keeping near its peculiar haunts. When the bait is seized by a pike, the jerk loosens the fastening, and the whole string unwinds; the wood, cork, or rushes floating at the top, indicating what has occurred. Floats of cork or wood are generally painted, in order to render them more distinctly visible on the water to the fishers who pursue their amusement and the liggers in boats. Floats of rushes are preferred to others, as least calculated to excite suspicion in the fish.

In page 150 (No. 4 of SPORTSMAN'S MAGAZINE) will be found two articles on TRIMMERING, and in pages 152, 153, will be found the trimmer itself, and the best mode of baiting it.

From trimmering we turn to trolling. The best baits for pike are a small trout; the loach, or miller's thumb, the head end of an eel, with the skin taken off below the fins; a small jack; a lobworm; and in winter fat of bacon. Walton speaks against baiting with a perch, but the perch is as good a fish to bait with as roach or bleak. With respect to anointing your dead bait "with gum of ivy dissolved in oil of spike" (i.e. lavender), about which a writer in *Bell's Life* so flippantly quizzes Father Isaac, there is no doubt that fish are greatly attracted by odours. It would here be somewhat too lengthy a digression to enter upon proofs, we shall therefore merely observe that the undoubted cause of salmon-roe proving so good a bait is its fishy smell. "Observe," says Col. Venables, "that all your baits for pike must be as fresh as possible. Living baits you may take with you in a tin kettle, changing the water often; dead ones should be carried in fresh bran which will dry up that moisture which would otherwise infect and rot them."

The father of anglers, "Old Nobbs," as well as Sir James Hawkins in his notes on Walton's Angler, edit. 1760, has a good many quaint directions on trolling, none the less practical and useful from their antiquated garb; it is possible we may embody them in the next paper.

The rod should be of strong bamboo cane, and from ten to twelve feet long, with a tolerably stiff top of whalebone or hickory; the rings should be five in number, and not less than three-eighths of an inch in diameter in the opening, that the line may run freely. A strong winch will be required, which must hold at least forty yards of line that is not subject to kink. Mr. Jesse recommends a strong trolling-line sold by Mr. Barth, of Cockspur-street, and I have seen a very good sort of line for this purpose, manufactured by Mr. Bazin, of Duncan-place, Hackney. Some trollers prefer a rod twenty feet long, in which case your cast on the water is made in the same manner as in spinning the minnow for trout, but with a longer line; and the lighter your bait falls upon the water the greater your success. Mr. Jesse strongly recommends the use of a wooden reel, one of about four and a half inches across, having the rim grooved for the reception of the line. These reels turn round with great rapidity when the cast is made, letting out a sufficient length of line, and are wound up again by turning them with the fore-finger. They are much to be preferred to a common brass reel, especially in fishing from a boat;

they avoid the noise and much of the trouble of winding up, and the line never kinks.

Some anglers prefer fishing with the gorge-hooks, others with snap-hooks, but my own experience induces me to prefer the former as the best general mode of trolling; and this kind of fishing I shall first describe. The gorge-hook is either a double or single hook, fixed on twisted brass wire, and loaded on the shank with lead, to which is attached a piece of gimp, eight or ten inches long, at the end of which is a small loop.

(To be continued next week.)

## WRINKLES FOR THE GROOM—NO VIII.

Pursue our promised directions for the winter treatment of man's best servant, by a wrinkle or two on the subject of:—

### CLOTHING A WET HORSE.

When the horse can neither be dried by the wisp, nor kept in motion, some other means must be taken to prevent him catching cold. He may be scraped and then clothed, or he may be clothed without scraping. This is not a good practice, nor a substitute for grooming; it is merely an expedient which may be occasionally resorted to when the horse must be stabled wet as he comes off the road. Clothing renders him less likely to catch cold, but it does not perform the duty that ought to be performed by the groom. When the horse is completely and quickly dried by manual labour, there is not the slightest chance of his suffering any mischief from cold; the friction of the wisp keeps the blood on the surface, and the horse can be put up quite comfortable. When he is kept in motion till the moisture has all evaporated, he can suffer no more injury than if he were brought in quite dry. When clothing is applied, it is with the intention of checking evaporation. It makes this process go on more slowly than if the horse were naked; in consequence he loses less heat in a given time, and he never becomes very cold. The clothing also absorbs much of the water, which if allowed to evaporate, would take away much heat that is thus retained. Of course, the horse remains wet for a longer time than if he were unclothed. But it is doubtful if moisture applied occasionally for an hour or two on the skin is injurious. It probably has some influence; but it is well known that cold has much more. Long continued moisture injures the coat, destroys its glossy appearance, but I am not aware that it does anything else. I am not speaking of moisture applied for many successive hours, but of that which is retained perhaps an hour longer by clothing than it would remain if allowed to evaporate without interruption. I am aware that a horse is apt to perspire if clothed up when his coat is wet or damp. But this takes place only when the clothing is too heavy, or the horse too warm. In the case under consideration, the clothing, unless the horse be cold, is not intended to heat him, but to prevent him from becoming cold. In hot weather a wet horse requires less care; he need not be clothed, for evaporation will not render him too cold; and if his coat be long, it will, without the assistance of clothing, keep the skin tolerably warm even in weather that is not hot. In all cases the cloth should be of woollen, and thrown loosely over the body, not bound by the roller, and in many cases it should be changed for a drier and a lighter one as it becomes charged with moisture.

To many people all this care about a wet horse will appear to be superfluous. They will observe that horses are frequently exposed to all weathers, and to the worst of stable treatment, without receiving any apparent injury. This is true with regard to many horses; their work is not exciting, not requiring that exertion which agitates the whole frame. There are horses, too, of less value, but performing work of the severest kind, upon whom a great deal of care cannot be bestowed. The proprietor may think it is cheaper to let the horses run considerable risk than to keep a sufficient number of men for taking better care of them. These can be right only when their horses are very worthless, and perhaps not then. In a valuable stud it is otherwise. The extra expense of such careful treatment is not to be considered where horses are worth from fifty pounds to more than five hundred. It is also true that among stage-coach, and other horses of a similar kind, there are many who do not receive any injury from a wet coat. Those that have been gradually injured to exposure, or to stand unheeded till they dry, may feel cold and uncomfortable, and have a long and rough coat, but their health remains unaffected. The power of the system to accommodate itself to circumstances is very great. These horses are as easily wet to the skin as other horses; but their skin has learned to furnish an additional supply of heat, so soon and as often as the evaporating process demands it. Such horses require little care, though more would make them look better. But stablemen who know this, are apt to treat all the horses alike. The young and the delicate must have additional care till they are injured to exposure.

All horses, whatever be their age, condition, and work, are most easily injured by exposure to cold, after they have been heated by exertion. Every man may have proof of this in his own person. After perspiring he feels cold and disposed to shiver, though by this time the skin may be quite dry. It is the same with the horse. Before he has been heated he

might stand in the cold, or with his coat wet for perhaps half an hour, without any danger; but after he has perspired pretty freely from exertion, motionless exposure in a cold atmosphere for fifteen minutes will do him more harm than he would receive in thirty minutes before the exertion; or, in the one case, he would be none the worse—in the other, he would have a cough next day.

Therefore, a wet horse requires most care when his work has heated him. He must be dried more quickly, or kept in motion for a longer time than if he had not been excited.

It is continued cold that does the mischief in all cases; some, from habit, will bear much more than others, but none seem able to bear it so well after as before perspiring. The intolerance of cold seems to remain for an hour or two after the horse is quite cool, and to increase as the skin loses its heat.

The first symptom of approaching danger is staring of the coat; if the horse be immediately put into a warm stable, or warmly clothed, or put in motion, he may, and probably will, escape. The second symptom is shivering, which ought to be quickly arrested by applying warmth. There is no danger in exposure, so long as the skin remains comfortably warm or hot.

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 450.)

It would not be a fair commentary on Epsom and its "DERBY DAY," to dismiss it without a word or two as to the past year's race. It was a great surprise, and there cannot be a doubt was run in a very awkward manner; but I am far from calling the MERRY MONARCH a "brute" and a "cocktail;" and, I am inclined to think, that those expressions of "PEGASUS" will not find an echo in the breasts of judges of horseflesh. The reasoning, too, which "PEGASUS" adopts, is open to so much observation, that I am surprised he has used it. What did *Nutwith* do after the St. Leger? What race was *Attila*, in which showed superior powers, after the Derby? How was it with *Little Wonder*, with *Beeswing*, *Running Rein*, with *Orlando*, and with *Coronation*? *Orlando* had a walk over or two; but the others, I think, may be put as 'nil.' Some, I know, say *Mentor* could have done it; and, in the eyes of "PEGASUS," he was "a perfect Leger horse;" but neither in the Derby or Leger did he make any show. I do not mean to compare the Merry Monarch with *Orlando*, but I have no hesitation in saying he is very far from being a subject of derision. For myself, although I do not feel myself at liberty to use your columns as the vehicle for carrying my vanity to the public eye, I do take credit that "THE SPORTSMAN'S MAGAZINE" was the only paper which stated, through Soothsayer, to the public, that "*Daddy Forth* would go and do it." The Merry Monarch was the winner, and Doleful well up; both of whom were in *Forth's* stable.

Soothsayer named also Old England and Idas, because the latter had so fine a condition, and it was just within the cards he would pull through. Looking at the horses, however, at the present day, I think Old England, Alarm, and the Libel were the three best in the last Derby.

The talk about the Derby had not subsided before the coming contest for the IMPERIAL CUP AT ASCOT. The race between Idas and Wood Pigeon, and the New Stakes there, attracted the attention of the rooms.

ASCOT RACES, royal Ascot par excellence, opened on June 10th, with the TRIAL STAKES of 500 sovs. each, with 50 added, which was won by The Libel, beating Knight of the Whistle, Discord, and some others. Hero, a two year old, "well in," was third. The race between Wood Pigeon, Idas, and Salopian, induced some heavy betting. 5 to 4 on Idas, which Lord Exeter, to whom Wood Pigeon belonged, took to a large amount. Nat rode Idas, but could never reach Wood Pigeon, (Marson) who won by a length. As the two 'good uns' made work of it, poor Salopian was, of course, left behind. From this day Idas went back for the St. Leger, and ultimately went out of the betting altogether. Nat, on Lothario, two miles and a half, won the First Class Ascot Stakes, and Queen Mab the Second Class. The Gold Vase was won by Sweetmeat, The Libel second, beating Wood Pigeon, Zanoni, and Fuzboz. The Cobweb colt beat a bad one, Tunick, for the 200 sovs. Sweepstakes. Weatherbit won the Molecomb; the Turquoise colt second; Refraction third; Old England fourth. Collingwood beat Subscription, two years old, by six lengths. Idas beat Gwalior, and in a subsequent race Lyons, easily, it being rather too much for the "pride of Newmarket" to stomach. Stutch beat two others of Lord Exeter's, Jet and Topaz, for the Coronation Stakes, 100 sovs. each. Cherokee won the Fern Hill, beating Fuzboz and filly out of March First, three years old, and three or four other two years old, Buttress among them. Euenus, going in his glory over the New Mile, won the Royal Hunt Cup, against a very numerous field, including Queen Mab, Semiseria, The Empress, A la Mode, Yardley, and Lothario. Sir Gilbert got a walk over, and the Turquoise colt was beaten by Lady Wildair. Minotaur won the 100gs. The race for the New Stakes came off in melting weather, and before the start, full three-fourths of the young uns broke out into a sweat. Sting ought to have won this race, but it was snatched from him by a colt of Lord Lons-

dale's (not in the Derby), who was placed first, Sting second, Astonishment was third, Rint filly fourth, and Miss Milner colt fifth.

Your readers having now obtained, your Almanack, cannot do better than refer to it as to such of these colts and fillies as are in the Derby and Oaks. The same rule applies to all past races of two years old, and those to come. In this race Cherry Bounce, Madcap, and Dexterous, West-Countryman, Buttress, and the Princess Alice made no show. The Cup Race was one of great interest. The old mare, Alice Hawthorn, ran well; in beating her, Foigh-a-Ballagh beat himself, and the Emperor went in a winner. It was expected Orlando and Ithuriel would have been at the post; but they, as well as several others, were scratched. Cowli, a good horse, if blood and training can make one, broke down. The Visitor's Plate was won by the Libel, another winning for him here (so much for his Derby running), beating eleven others, most of them good ones. Sweetmeat had a walk over for something like 120l. Wood Pigeon beat Cinizelli and Triumvir for the Chesterfield. Beaumont won the Boro' Members plate, and was claimed of Mr. Hill for 150l. I consider him a fast horse for a mile. The First Class Nottingham Stakes won by Discoid; the Second by a colt by Ratcatcher out of Turquoise four years old, and the Third Class by Evenus. These four days at Ascot were most brilliant, but the heat was intolerable, and water quite at a premium. The evenings, coming home, however, were cool.

On the 16th June, THE SUTTON PARK RACES brought out a good many of "the sort" from Birmingham. The Windley Pool Stakes fell to Old George, beating Lord Saltoun by a neck, and several others. If I mistake not, there is a brother of Lord Saltoun in the Derby, and may be judged of by this race, "rather." For the Bonehill Stakes, 5 sovs. each, 20 added, Ninety-One beat Arungzebe; Capt. Peel rode the latter, Mr. Parr the former. Marian Ramsay beat Tipoo. For the Birmingham Stakes, on the 17th, being the last thing at the races as far as the sovs. go, Roderick beat Marian Ramsay, and Old George and others. A little thing of 3 sovs. each was won by the Princess Olga.

On June 18, Ninety-One, transferred from Birmingham to HAMPTON "per Rail," won the Cup of 5 sovs. each, 50 added. The Surrey and Middlesex fell to Misdeal, against a tolerable field. Loadstone, by Camel, won the Hurst Cup, and What the 100 guineas. The Claremont Stakes, 2 years old, saw Astonishment beat Anna Bullen; Moose Deer, and another, all bad. In a Handicap Stakes, the Queen of the Gipsies, in a mile race, gave What the go-by.

On June 23rd, that very excellent Meeting, NEWCASTLE, commenced with a walk over by Mid Lothian. The Northern Derby of 25 sovs., with 100 added, fell easily to Mentor, and the Maiden Plate, the same to Mildeis, by Inheritor. The Tyre Stakes, a tolerable criterion, were won by Malcolm, 2 years old. The Northern Oaks Stakes were carried off by Marian Ramsay. For the Tyre Stakes, a filly by the Bard, and the Lady Abbess, were the only other two, 9 subscribers. Jinglepot won the 100 guineas, beating Comical Boy and our old friend Trueboy. Mentor had another easy victory against sister to Pedometar and Nanny Banks for the Gatheshead Stakes. The Northumberland Plate, a great Sweep Race, was won by Inheritress, jockeyed by Lye, who made a waiting race of it, and won by half a length; Merry Andrew second; Lightning third; Cohesress, not placed, was fourth; Queen of the Tyne fifth; and Pagan sixth. For the Tyne Stakes, 19 subscribers, 2 years old colts and fillies; Fair Star, after a struggle, beat Sheraton, a colt by Velocipede, and Charcoal by Revolution. There is a colt, by Revolution in the coming Derby. Mr. Mostyn's, and Mr. T. R. Mostyn's stock of colts and fillies appear to be chiefly derived from him and Hetman Platoff. I do not know of anything else worth mentioning at Newcastle, with the exception of the Gold Cup (150), which promoted a good race between Winesour and Mid Lothian, which ended in favour of the former; Pagan, like Trueboy, and the Devil-among-the-Tailors, making no figure this year. Inheritress made a waiting race of it again, and beat Glossy, Dog Billy, and some others, for the Members' Plate. As a close, a little larking was had recourse to, and four started for 1 sov. each, 5 added, which Mr. Robinson won by leading off with the Queen of Hearts, the others following suit merely. In my account of Gorhambury last week, your readers will place Fitzwilliam for Fitzallen in the 2 years old race.

#### INGENIOUS AND VALUABLE SPORTING AND TRAVELLING INVENTIONS.

Time is the test of truth. We recently received from the inventor Mr. J. B. Durham of 261, Regent-street, a most admirable, ingenious and useful knife. The superiority of British cutlery has been long known and admitted, but this sample combines excellence of manufacture with skilful and inventive contrivance, that to the sportsman who follows the hounds, or the traveller who "tools his kit" along the queen's highway, has only to be made known to be deemed an indispensable pocket companion. The knife, though by no means seriously cumbersome, contains, in addition to a powerful and highly finished blade, a double threaded screw-punch, with screws passing into nuts, adapted for the instantaneous remedy of the provoking contingency of broken traces or stirrup-leathers. A screw, an efficient turnscrew, and a hoof-pick are also among the valuable additions of this *malum-in-parvo* instrument. The screws and their nuts, as we prefer the useful to the ornamental, are the portions of

the invention which most strike us; the unsightly, inefficient, tedious, and clumsy junction effected by string or cord, is superseded by these. Each screw is provided with its nut—the punch first-mentioned forms the appropriate holes—the severed parts are placed in juxtaposition—and *hey presto!* one of the most annoying of road or field mischances becomes the subject of a smile, instead of the cause of the expenditure of much valuable time and, in many cases of prodigal swearing. For the saving of time and the husbanding of his soul's health, we would advise every horseman or charioteer to supply himself with the DURHAM DUEIN HUNTING AND TRAVELLING KNIFE.

THE WINGED GAME OF AMERICA.—Winged game is now only to be met with in any abundance in particular parts of America, its rapidly increasing population having exterminated much of it. Mr. Fowler observes, that few woodcocks and squirrels were to be found, with a greater plenty of quails. To use his own words, "Hares and pheasants there are none, and partridges (in some places called pheasants) are scarce. Woodcocks and snipes are uncertain, both as to season and situation; it is true that great quantities of other birds may sometimes be killed, for instance, wild ducks and pigeons, which are occasionally seen in flocks of many miles in extent; but after all, and much as I have heard of American shooting, in my opinion it is a poor insipid diversion compared with the English, being pursued without any kind of system or science, and reminding me more of the onsets of our mechanics and shopmen let loose at Christmas and on holidays to range the fields, no matter where, and pounce upon all no matter what, than of anything worthy the name of shooting. Let no English sportsman think to better himself by emigration in this respect, I'll answer upon trial for his total disappointment."

PEEL'S GAMES.—We understand that the Premier is shortly about to publish a new edition of *Hoyle*, embracing all the new games and tricks of which, by a skilful knowledge of how to play his cards, Sir Robert Peel has become master. He intends devoting an entire chapter to shuffling, which is an art of itself, and one which the Premier has carried to the utmost perfection. There will be a few pages devoted to hints on cutting, with remarks on the proper time to cut, and a few general observations on the treatment of the pack, so as to make a good hand of it. Tricks will occupy a very large space of the Premier's work, but the game will be the chief feature of it. Cribbage, as played at the expense of the Whigs, will be elaborately explained; and a chapter on revokes will explain how it is that there is nothing irrevocable in the games of the Premier. The work will be emblazoned with a splendid portrait of Sir Robert Peel, as the Knave of Spades, in which character he appeared the other day, at the commencement of the works of the Trent Valley Railway.—*Punch*.

WILD-FOWL SHOOTING.—(From a Hampshire correspondent).—Our lakes and spreaders around Southampton are bare of wild fowls this season, and very little prospect is at present held out to the long-gun punters of being repaid for their toils. Owing to the very boisterous state of the weather, the punters are afraid to push off to sea; and what birds are at present affecting our estuaries keep far aloof off the land; nevertheless, all the salt pans around Keyhaven, are well furnished with sandpipers and others of the tringo-family, which afford us excellent sport. We have had a few scaup ducks which have taken up their abode among us during the last few days, and our rivers and dykes are not without a tolerable sprinkling of teal. This time last year our waters were literally black with wild fowl, whilst at present, we have scarcely been visited by the usual quantity which arrived on our coasts even by the commencement of October.

FAREWELL TO THE GAME-LAWS.—During January Parliament is to meet, says an amusing paragraph, "for the despatch of business." The partridges and pheasants are so frightened at this announcement, which they foolishly imagine implies the revision of the laws under which they have hitherto peaceably lived, that they are allowing themselves to be shot in hundreds. The grouse intend passing the autumn next year in London, as they have been told by a city sparrow that they have nothing to fear from the cockneys. The hares, also, have run over to Germany, but the rabbits have retreated in a body to Wales, the country of their adoption. From these moves it really looks as if the knowing old birds had a presentiment it was all up with the landlord's game.—*Punch*.

SINGULAR DEATH OF A VALUABLE GREYHOUND.—Thomas Ensworth, Esq., of Oxford, gentleman well known among the lovers of coursing, lost last week a valuable dog (own sister to his celebrated Empress), in the following singular manner:—His dogs were taking their usual exercise on Thursday, in the Summers Town-road, when a lad about ten years of age, threw a stone and hit one of them on the jugular vein, which caused its immediate death. The dog was a great favourite of Mr. Ensworth, who stated its value to be 50l., and was to have run this week at Letcomb, but for this unfortunate occurrence. The boy was had up before the county magistrates on Saturday, but as the owner of the dog did not wish to press the charge, he was severely reprimanded by Mr. Ashhurst and discharged.

A PROLIFIC PIG.—Mr. Joseph Wilkinson, of Hildesforth and Sedgeby, has a sow which, in fifteen months, littered four times, producing thirty-eight pigs, twenty-eight of which he sold at good prices.

# ADVERTISEMENT.

QUEEN'S HEAD, QUEEN'S HEAD COURT, WIND-  
MILL-STREET, HAYMARKET.

**JEM BURN** Respectfully Announces to the patrons of the Good Old English Art of Self-defence, that he has re-opened his great room, where the illustration, exhibition, and practice of Sparring will take place every Monday evening during the winter-months. Master of the Ceremonies, and Gentleman-usher of the Bunch-of-five, Uncle Ben. Johnny Hannan, and several top-sawyers, will put on the muffers, and "teach the young idea how to shoot." The snuggery affords an admirable retreat for the Cerinthians, the club-room is commodious for the commonalty, the champagne celestial, the port potent, the brandy without any admixture of B.B., and the malt of all sorts miraculous. God Save the Queen! (and sustain her HEAD.)

**EVERY MAN HIS OWN HARNESS MAKER.**  
**THE DURHAM DUCIE HUNTING AND**  
Travelling Knife.—J. B. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of noblemen, sportsmen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers. By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

" Windsor Castle, Oct. 4, 1845.  
" Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

To be Drawn on Tuesday, April 28th.  
All Prizes paid as the Judge places, less Five per cent. Members are requested to pay up their Subscriptions one week before the Draw, as no further notice can be given. The secretary will attend every Tuesday.  
J. RUSSELL, Treasurer.

THE MOST POPULAR WORK OF THE DAY.  
On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence

Volume I. of  
**THE MYSTERIES OF LONDON,**  
By George W. M. Reynolds,  
Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.  
\* \* This magnificent volume contains 424 royal octavo pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies.  
London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

Now ready, the First Number of the new and popular Historical Romance of  
**MARGARET OF NAVARRE;**  
OR,  
**THE MASSACRE OF ST. BARTHOLOMEW'S EVE;**  
BY M. ALEXANDRE DUMAS.  
This Work is published uniform in size and price with "Marie Antoinette" (Penny Numbers and Fourpenny Parts), and with the number is presented a beautiful engraving of  
**THE MASSACRE OF THE HUGUENOTS ON ST. BARTHOLOMEW'S EVE.**  
With the Second Number, a splendid Vignette on steel grates.  
\* \* Other works by the same celebrated Author are preparing for the press, and will be speedily announced.  
London: G. Pierce, 310, Strand.

**DERBY SWEEPS for 1846, at WM. TURPIN'S, Old Essex Serpent, King-street, Covent-garden.**

180 at 2s 6d..... 13..... 5..... 2..... 3 2s 6d  
All the money divided and paid (less 5 per cent.) as the Judge places, without reference to any subsequent dispute as to age, pedigree, or other disqualification. Post Office Orders, payable at Charing Cross, will meet with attention. Sweeps open for the Chester Cup, 20s. 10s. and 5s.

**PRICE AND GOSNELL'S PERFUMERY.**—NOTICE.—Executors of the late John Gosnell v. Rees Price, Perfumer, 28, Lombard-street, trading under the firm of Price and Co., and previously under the assumed name of "Napoleon Price and Co." The Judges in the Court of Exchequer in this day decided in favour of the plaintiff in this case. The defendant, Rees Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr. John Gosnell (father of the parties now carrying on business under the firm of John Gosnell and Co., 12, Three King-court, Lombard-street), and bound himself, under forfeiture of £5,000, not to commence business within the Cities of London or Westminster, or within the distance of 600 miles from the same, and notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract.—12, Three King-court, Lombard-street, Jan. 27, 1845.

**CAUTION TO THE TRADE. EVERETT'S PREMIER BLACKING.**  
**WHEREAS** an Injunction has been this day granted\* by the Vice-Chancellor of England, to restrain Samuel Allin and others from selling or disposing of any Blacking or Composition under the name of, or as, or for, or described as, or purporting to be the same Blacking as was made and sold by William Everett in his lifetime, and which is now manufactured solely by us, and sold under the name of **EVERETT'S PREMIER BLACKING**; all Parties are hereby cautioned against purchasing, selling, or exposing for sale any blacking having affixed thereto, labels in any way similar to those used by us, or any other labels of cards, so contrived or expressed as, by colourable imitations or otherwise, to represent the Blacking to be the same as that manufactured and sold by the late William Everett, and now manufactured only by us, as legal proceedings will be immediately taken against any person who, after this notice, shall in any way infringe on the terms of the said Injunction.  
EVERETT and Co.,  
August 19th, 1845. 51, Fetter-lane, London  
\* Vide Times and Herald, 20th August, 1845.

**DILE! BILE! BILE! — WORBOYS**  
**VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, flutering of the stomach, flatulency, habitual costiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½d., and 2s. 9d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.  
N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

**NO MEDICINE for the CURE of ASTHMA**  
and Consumption, Coughs, &c., was ever attended by speedy and unfailing success as **DR. LOCOCK'S PULMONIC WAFERS.** In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.  
More cures of Asthma, Consumption, Coughs, &c., in Hull. Read the following from Mr. J. C. Reinhardt, 22, Market-place. Dated Jan. 9, 1845.  
Gentlemen,—Many and surprising are the testimonies of relief afforded to confirmed cases of asthma and consumption, and long standing coughs, and it will gratify me to refer to many respectable parties who are really anxious to make known privately the great benefit they have derived from this truly seasonable remedy. I enclose a testimonial of no ordinary value, as it is the genuine expression of a grateful man's feelings.  
I remain, J. C. REINHARDT.

**Cure of Cough and complete Restoration of Voice.**  
Jan. 9, 1845.  
Sir,—Having been cured of a most obstinate hoarseness and cough (which for a considerable time totally deprived me of my voice) by means of Locock's Pulmonic Wafers, and having spent pounds in seeking relief, but all to no purpose, I scarcely know how to express my gratitude for the surprising and sudden change they have wrought upon me. I feel the least I can do is to assure you it will give me unfeigned pleasure to satisfy any one who favours me with a call, as to the wonderful efficacy of these Wafers.  
(Signed) J. MEMELL.  
No. 7, Alicia-street, (Sculcoates), Hull.

**DR. LOCOCK'S WAFERS** give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.  
To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.  
Price 1s. 1½d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.  
**CAUTION.**—To protect the public from spurious Imitations, Her Majesty's Honorable Commissioners have caused to be printed on the stamp outside each box, the words **DR. LOCOCK'S WAFERS** in white letters on a red ground. If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of  
**THE SILENT FRIEND; a Medical Work**  
on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and J. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.  
Sold by Strange, Paternoster-row; Hannay and Co., G3, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street, Soho, and all Booksellers.  
**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.  
**PERRY'S PURIFYING SPECIFIC PILLS,** price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.  
Consultation free, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure. Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.  
LONDON.—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DUFFLE.—Thursday, Nov. 27th, 1845.

[Stamped to send free by Post, Three-pence.]

## SPORTING DOCS.—NO. V.—THE GREYHOUND.

**I**N the twentieth number (page 352) in the article appended to the engraving "Flirt and Westwind" a series of papers on the GREYHOUND was promised; the appearance of this portrait of a "graceful greyhound" seems to offer a fitting opportunity for the performance of that promise.

Therefore—since brevity's the soul of wit,  
And tediousness the limbs and outward flourishes,  
We will be brief—

and avoiding all prolixity of preface begin the subject of

### COURSING AND THE GREYHOUND.

#### SECTION I.

##### ANCIENT COURSING.

Poor puss! thy life is indeed but a day!  
When the eye-searching greyhound once crosses your way;  
Thy tears show the dread of the danger behind,  
And tell, but too plainly, thy death-doom is signed.

I shall not attempt to enumerate all the methods, which have been successively adopted for the capture of the hare, but confine myself solely to that which we distinguish by the name of the leash or coursing. This is a diversion of undoubted antiquity, and historians have not been wanting to inform us of its institutes. Amongst these the two most conspicuous are Xenophon and Arrian, the former of whom flourished in the year B. C. 359, and the latter A. D. 161. Much however as they

differ from each other in form and regulations, there is nevertheless sufficient evidence to convince us that each came originally under the same denomination; and if that described by the last mentioned author bear a nearer affinity to our ideas of coursing, the change in the system must perhaps be attributed to the different characters of those nations whose manners are respectively delineated. The characteristic trait of every people indulging in luxury, and on the verge of a decline, is invariably that of apathy and indifference; a wish perhaps to reap the reward of power without the proper ideas or inclination to exert it; hence we may account for the use of Xenophon's nets, and by a contrary elucidation, for the more liberal and honest stratagems of the Gauls. Indeed after a lapse of above 1600 years, it is somewhat surprising that the ideas of sporting in this particular should so nearly assimilate, and that many of our modern gentry (in blissful ignorance no doubt) still retain such antique and barbarous notions. I shall make no apology for going a little out of our regular line, and for once at least, taking advantage of what does not always allow of so strict an application. Our historian does not confine himself to one description of sportsmen, but like a true and faithful narrator makes honorable mention of what perhaps might not inaptly be termed the Esquire and Yeoman of the day. "The most opulent of the former," he says, "used to send out good hare-finders early in morning, to those places where it was thought most likely that hares might be found sitting: these returned to their employers, and reported the number of hares found, whereupon they

took to horse, and each, attended by a couple of greyhounds, went forth to course them." So far, however, from "mobbing," or taking any unfair advantage, strict regulations were also observed. Not more than two dogs were to be slipped at once, nor were these to be laid on too close to the hare; for although the animal is swift, yet, at first starting, she is so terrified at the hallooing, and by the closeness and speed of the dogs, that her heart is overcome by fear, and in this confusion, the best sporting hares are often killed without showing any diversion. The hare was, therefore, to be allowed to run some distance from her form before the dogs were set after her. The best hares are always those found in open and exposed places, as they do not immediately endeavour to shun danger by running to woods, but whilst contending in swiftness with the greyhound, moderate their own speed according as they find themselves pressed: if over-matched in speed by the dogs, they try to gain ground by repeated turns, which throw the dogs beyond them, at the same time making for the nearest place of shelter. "The true sportsman," says the ancient writer above-mentioned, (and the sentiment will find an echo in the bosom of every admirer of the "long dogs,") "does not take out his dogs to destroy the hares, but for the sake of seeing the contest between them, and is glad if the hare escapes, which should never be prevented, by disturbing any brake in which she may have concealed herself after beating the greyhounds. They are also frequently taken alive from the dogs by the horsemen who closely follow them, and, after the greyhounds are taken up, may be turned out for future sport. Speak to your greyhounds whilst in the field, considering it a kind of encouragement to them to know that their master is a witness of the excellence of their running; but this speaking should be chiefly confined to the first course, lest, after being weakened by a second or third, they may, by such encouragement, exert themselves beyond their strength and hurt their insides, which is the destruction of many good dogs."

"Those who have not the conveniency of hare-finders, go commonly in a company on horseback, when they beat the likely ground, and, on starting a hare, the greyhounds are let loose after her: those who are keen after the sport go on foot, and if any one accompany them on horseback, it is his business to follow the dogs during the course."

It is singular that, after the lapse of so many centuries, the mode of beating for a hare in coursing should be now exactly what it was in the time of Arrian. The company were drawn up in a straight rank, either horse or footmen, and proceeded at certain distances from each other, in a direct line, to a given point, and wheeling round, that they might not go over precisely the same track, they beat the ground regularly back. This practice is still continued. A person was appointed to take the command of the sport, if there were many dogs out; he gave orders that such dogs should be slipped, according as the hare took to the right or left, and these orders were punctually obeyed.

The Isle of Dogs, now converted to the first commercial purposes, derived its name from being the depot of spaniels and greyhounds of Edward III.; and this spot was chosen as lying contiguous to his sports of woodcock shooting, and coursing the red deer in Waltham and other royal forests in Essex, for the more convenient enjoyment of which, he generally resided, in the sporting season, at Greenwich.

In the days of Elizabeth, when she was not herself disposed to hunt, she was so stationed as to see the coursing of deer and greyhounds. At Cowdrey, in Sussex, the seat of Lord Montacute, A.D. 1591, one day after dinner, the Queen saw from a turret, "sixteen bucks all having fayre lawe, pulled down with greyhounds in a launch or lawn."

In ancient times three several animals were coursed with greyhounds, the deer, the fox, and the hare. The two former are not practised at present, but the coursing of deer formerly was a recreation in high esteem, and was divided into two sorts, "the Paddock" and "the Forest of Purlieu."

## SECTION II.

### MODERN COURSING—CELEBRATED GREYHOUNDS.

To have capital coursing, a good dog is only one part of the business; it is not only necessary to have a good hare also, but a country where nothing but speed, and power to continue it, can save her. Over the high wolds of Stackton, Flixton, and Sherborne, in Yorkshire, where hares are frequently found three or four miles from any covert or enclosure whatever, the ground, the finest that can possibly be conceived, consisting chiefly of sheepwalk, including every diversity of hill, plain, and valley, by which the speed and strength of a dog can be fairly brought to the test; it will not require many words to convince the real sportsman that such courses have been there, as no other part of the kingdom, in its present enclosed state, can possibly offer, and these necessarily require a dog to be in that high training, for which, in coursing of much less severity, there cannot be equal occasion.

The man who in any way challenges the whole world, should recollect the world is a wide place. Lord Orford once tried the experiment, and the challenge thus confidently made, was as confidently taken up by the late Duke of Queensberry (then Lord March), who had not a greyhound belonging to him in the whole world. Money will do much; and with indefatigable exertions it will do more; and it is a circumstance well known to many of the sporting world, that, upon particular occa-

sions, some of the best pointers ever seen have emerged from cellars in the metropolis, which, it might be imagined, had never seen a bird in the field. The duke, in this instance, applied to that well known character, old Mr. Elwes, who recommended him to another elderly sportsman of Berkshire (Captain Hatt), a courser of no small celebrity, who produced a greyhound that, in a common country, beat Lord Orford's Phenomenon.

This same kind of challenge was some years since given for Snowball, and was the only challenge of similar import that has not been accepted; but it is requisite, at the same time, to remark, that the match was restricted to be run only in such places where a fair and decisive trial could be obtained. Those who have seen great matches decided by short courses, and bad hares, (where chance frequently intervenes,) must know that such trials are uncertain and deceptive, and that the real superiority of either dog may still remain unknown when the match is over. Perhaps, even in the best country, should the contest be for a large sum, and between two greyhounds of equal celebrity, the most equitable mode of ascertaining the merit of each, would be to run three courses, and adjudge the prize to the winner of the main of the three, it being very unlikely that, in three courses, run in an open country, the superiority of one greyhound over the other should not be evidently perceived.

The excellence of Snowball, whose breed was Yorkshire on the side of the dam, and Norfolk on that of the sire, was acknowledged by the great numbers who had seen him run; and, perhaps, taken "for all in all" he was the best greyhound, that ever ran in England. All countries were nearly alike to him, though bred where fences seldom occur; yet, when taken into the strongest inclosures, he topped hedges of any height, and in this respect equalled, if not surpassed, every dog in his own country. They who did not think his speed so superior, all allowed, that for wind, and for powers in running up long hills without being distressed, they had never seen his equal.

On a public coursing-day given to the township of Flixton, the continuance of his speed was once reduced to a certainty by the known distance, as well as the difficulty of the ground. From the bottom of Flixton Brow, where the village stands, to the top of the hill where the wold begins, is a measured mile, and very steep in ascent the whole of the way. A hare was found midway, and there was started with Snowball, a sister of his, given the Rev. Mr. Minithorpe, and a young dog of about twelve months old, of another breed. The hare came immediately up the hill, and after repeated turns upon the wold, took down the hill again; but finding that in the sandy bottom she was less a match for the dogs, she returned, and in the middle of the hill the whelp gave in, Snowball and his sister being left with the hare; reaching the wold a second time, she was turned at least fifty times, where forcibly feeling the certainty of approaching death, she again went down the hill, in descending which the bitch dropped, and by immediate bleeding was recovered, Snowball afterwards ran the hare into the village, where he killed her.

The length of this course, by the ascertained distance, was full four miles, without adverting to the turns which must have increased it; this, with a hill a mile high, twice ascended, are most indubitable proofs of continuance which few dogs could have given, and which few but Flixton hares could have required. The people of Flixton talk of it to this day, and, accustomed as they are to courses of the richest description in the annals of sporting, they reckon this amongst the most famous they have seen.

(To be continued.)

MEMORY OF THE HORSE.—A dealer, of whom I have bought a horse occasionally, had one he kept for his own hunting. I had for some time wished to purchase the horse, and got the refusal of him if ever he was to be sold. He had ridden this horse one season. At the commencement of the next he very imprudently took him out before he was fit to go; in short, fat. The consequence was, he could not carry his master in his usual way. He foolishly thought the horse sulked, and punished him a good deal with the spurs, till he fairly shut up; in short, knocked up. His master went the last thing at night to look at him; the moment the horse saw him he ran at him open mouthed; fortunately the door was open, but so near a thing was it, he left a small piece of his flesh and the whole of the back of his coat in the horse's mouth, right glad to get off so well. Now the horse had offered no injury to the man who had dressed and done him up, though he remarked his being very irritable in being cleaned; but he remembered his master, and would not let him come near him. I saw the horse two days afterwards, went up to him as I always had done, and found him perfectly good tempered. I then bought him. Some weeks afterwards I rode him into his old master's yard; he of course came towards me: so soon as he was within a few yards of me, the horse laid his ears in his poll, and would have run at him had I not checked him; and it was remarkable, but a fact, that ever afterwards, at least so long as I had him, the moment the door of a stable or box where he was standing was opened, he looked instantly at who was coming; and I make no doubt but two years afterwards, when I sold him, had his old master gone near him, he would have run at him if he could.—*Sporting Magazine.*

## BRITISH BIRDS.—NO. XXIII.

THE WIGEON.

**AS** an interesting account of the mode of constructing the decoys in Lincolnshire and other fenny districts, illustrated by some illustrative engravings, already in the hands of the artist, is in progress for these columns, we shall be more brief in the particulars and details of this pretty little *Anas*, and its congener the TEAL, than might otherwise be necessary.

The Wigeon is known by the name of the Whew-duck (from its peculiar whistling call-note while on the wing and also as the PANDLED WHEW. The following description of this diminutive duck will be found accurate and distinctive.

The bill is an inch and a half long, narrow, and serrated on the inner edges; the upper mandible is of a dark lead-colour, tipped with black. The crown of the head, which is very high and narrow, is of a cream-colour, with a small spot of the same under each eye; the rest of the head, the neck, and the breast, are bright rufous chestnut, obscurely freckled on the head with black spots, and darkest on the chin and throat, which are tinged with a vinous colour; a band, composed of beautifully waved, or indented narrow ash-brown and white lines, separates the breast and neck; the back and scapulars are marked with similar feathers, as are also the sides of the body under the wings, even as low as the thighs, but there they are paler; the belly to the vent is white; the ridge of the wing, and adjoining coverts, are dusky ash-brown; the greater coverts brown, edged with white, (in some specimens wholly white,) and tipped with black, which forms an upper border to the changeable green beauty-spots of the wings, which is also bordered on the under side by another stripe formed by the deep velvet black tips of the secondary quills; the exterior webs of the adjoining quills are white, and those next the back, which are very long, are of a deep brown, (in some specimens a deep black), edged with yellowish white; the greater quills are brown; the vent and upper tail-coverts black.

Wigeons commonly fly in small flocks during the night, and may be known from other birds by their whistling note while they are on the wing. They are easily domesticated in places where there is plenty of water, and are much admired for their beauty, sprightly look, and busy frolicsome manners. There are some pretty specimens in the ornamental water in St. James Park.

The tail, which consists of fourteen feathers, is of a hoary brownish ash, edged with yellowish white; the two middle ones are sharp-pointed, darker and longer than the rest. The legs and toes are of a dirty lead colour, faintly tinged with green; the middle of the webs and nails black. The female is brown, the middle of the feathers deepest; the fore part of the neck and breast paler; scapulars dark brown, paler edges; wings and belly as in the male. The young of both sexes are grey, and continue in that plain garb till the month of February, after which a change takes place, and the plumage of the male begins to assume its rich colourings, in which it is said he continues till the end of July, and then again the feathers become dark and grey, so that he is hardly to be distinguished from the female.

These birds quit the desert morasses of the north on the approach of winter, and as they advance towards the end of their destined southern journey, they spread themselves along the shores and over the marshes and lakes in various parts of the continent, as well as those of the British isles, and it is said that some of the flocks advance as far south as Egypt. They remain in these parts during the winter, at the end of which the old birds pair, and the whole tribe in full plumage take their

departure northward about the end of March. While they remain with us, they frequent the same places, and feed in the same mode as the mallard, and are often taken in the decoys along with them and other kinds of ducks.

It arrives about the beginning of October, visiting our inland marshes, bays, and the mouths of rivers, and great numbers are annually taken in decoys, for the sake of the flesh, which is very excellent, as a vegetable diet (aquatic plants, sea-weeds, and ordinary grass) forms the chief support of this species. Mr. Richardson in a note gives the following interesting particulars, which he derived from Skelton, the intelligent keeper of a decoy in Lincolnshire:—"With respect to food, the mallard, pintail, and teal frequent rich flooded lands, swithering with their nebs in the soil, and sucking out all its strength, but the wigeon feeds quite differently, being an amazing fowl to graze and a strange eater of grass. It is especially fond of flutter grass, which it crops on the surface, but it likewise eats many other herbs." It is partial to willow-weed seeds (*epilobium*) as are also the mallard, teal, and pintail, preferring them to oats; and it feeds by day, but is also nocturnal in its habits.

The wigeon has been known to breed in Sutherlandshire; the nest is placed among low bushes, reeds, or bushes near fresh water, and is composed of vegetable materials in a state of decay, lined with warm down plucked from the parent's body. The eggs are cream coloured. In March the flocks begin their polar migration, and by the month of April our morasses and shores are deserted.

Wigeon Shooting, as well as other modes of taking wild fowl will be hereafter treated of.

## CORRESPONDENCE.

## COCK SHOOTING IN THE FORFST.\*

(From the New Sporting Magazine.)

SIR.—Towards the close of last season, when I was out several times in Lord Westmorland's forest, our business being rabbit-shooting, we only flushed the woodcocks incidentally, not beating for them in a regular manner. In this way one or two couple of cocks were killed in a morning, and I felt extremely desirous of having a day set apart and to beat the forest for woodcocks alone. Shortly after this I was called from home, and on my return the season was too far advanced for any prospect of sport. I, however, bore his promise in mind, and determined this season upon the first appearance of cocks, in any numbers, to be amongst them. It is a noble place, that far-spreading old forest, well stocked with well-grown trees, among which the towering oak is the most conspicuous, affording excellent covers for game of all kinds, and food for them in abundance. Here are partridges in great plenty when the stubbles are pecked and the fields become bare, woodcocks and snipes in great flights as winter approaches; and hares, pheasants, and rabbits always. The forest extending over many thousand acres is strictly preserved by Lord Westmorland, and a most noble preserve it is. From its extent, and the variety and abundance of game within its boundary it is unquestionably one of the first in England. In my estimation half the delight arising from field sports consists in having a fine wild country to beat over; the majesty of the rising hills and calm beauty of the valleys, studded with woods, and intersected by streams, have charms in themselves for the mind even if the excitement of sport be wanting.

A day having been appointed, we agreed to meet at Gordon's-lodge, and beat towards Reedshaw's and thence back to Moorhay-lawn, the keepers having reported that several cocks had been seen in the ridings during the two previous days. Well knowing the uncertainty of the stay of the woodcock, I was not without apprehensions that they might have shifted their ground during the day and night which had elapsed since I was invited to join the intended party. It is observed in an intelligent and most interesting work, that the snipe family in general, and woodcocks in particular, seem to be amongst the most meteorological of birds. That sudden, and seemingly capricious, shifting of their ground, is doubtless determined by a perception of approaching changes of the weather, which to our comprehension appears almost prophetic.

We found the men and dogs ready—the latter very fine spaniels, steady, and free from hare and rabbit; just such as one would wish for, and might expect to see in such a domain. As there generally is but little to amuse in the record of a day's shooting in a well-stocked preserve in the heart of England, although the death of every bird or hare may possess an interest with the sportsman who brings it down, I will therefore forego any lengthened attempt at description, and proceed with such incidents and information as may appear worthy the notice of the sportsman.

I was the first in the forest who had a shot that day, at a large cock, which I brought down. The shot was an easy one, I having flushed the bird close at my foot. To my surprise, considering the distance he was off when I fired, on going up to the spot where he fell, I was unable to find him—in short the bird had been only winged. We had no retriever with us on this occasion, so I became in a great degree, a retriever myself, and ultimately recovered my game. My plan of looking for him was the following: I called to one of the keepers to bring a steady

\* Mudie's "Feathered Tribes of the British Islands."

spaniel, and with his assistance, I followed on a hare track for near a hundred yards, and there, beneath a small alder, we found the wounded bird. If a woodcock fall winged, in a very open place, and no retriever is at hand, I believe the best advice to be given is, resignation to its loss; but if it fall among underwood or grass it will either remain there or run down the first hare or rabbit path which presents itself, and by following on the trails of these, if there be more than one, the sportsman will in five causes out of six, with almost any dog, recover his bird. We went on successfully for near an hour, two and a half couple of cocks having been bagged without any incident worthy of note, except that some were declared to be well killed, as they fell to the gun, and others took two and even three shots before they came down. From the excellence of the dogs, and the good line which we kept, no bird had hitherto escaped; the first that went away without a shot was flushed to the extreme left of the line of guns, and came careering across me, and almost immediately after pitched within two hundred yards of the place where I stood. I saw him go down, as I thought, very clearly, to the right of an oak, and one of the beaters, who was in a more open space, was of the same opinion. On our drawing near the spot it struck me that we were wrong, and that the cock was at least fifty yards further in advance. I therefore walked on and flushed the bird where I expected to find it. A little experience in woodcock shooting will enable any one to get a shot on a similar occasion. There was an open space about fifty yards from the oak, and whenever such a spot presents itself, or a riding or any track-way is near, the cock will not pitch amongst the underwood, but in these places. In marking a cock as much regard is to be paid to the neighbourhood of the place where he seems to pitch as to the place itself. Thus, if a bird drop in the young spring by the side of the high wood, it will assuredly run about six yards into it, while, on the other hand, if it pitch among the high wood, it will mostly alight in some open space in it. Woodcocks feed only during the night, or in the twilight, reposing all day. They generally select for their resting place a dry-spot, at the roots of trees, where the fallen leaves are strewn thickest, or where the withered grass is long. This selection, however, is always made in the near neighbourhood of marshy spots, which form their principal though by no means exclusive feeding grounds. The woodcock's bill is extremely sensitive, which will account for the otherwise inexplicable causes of its sudden flight and re-appearance, accordingly as the frost or dearth acts upon the earth's surface; or the atmosphere affects the worms and insects upon which the bird feeds. They always wash their bills after feeding, and hence it is that so many are taken in springs by the margins of rivulets and other small streams to which these birds resort towards morning for that purpose.

By one o'clock we had finished our luncheon and were ready for a fresh beat, the last hour and a half having been rather unproductive of sport. The number of cocks killed up to this hour was five couple. Whatever might be our success among the woodcocks during the afternoon, a rich treat awaited us in the beautiful forest scenery that was displayed to us in its most pleasing aspect as we continued to beat for our game.

For half a mile we had to traverse a declivity clothed with all the richness of the autumnal foliage, at the bottom of which there flowed a gentle stream, while the deer grazed in quiet along its banks, or trotted slowly down the avenues at the bottom of the valley. To add to the beauties of the scene there was a fine show of pheasants congregated on the hill side, attracted probably by its sheltered situation, and the sunshine which then mildly beamed upon it from the west. The bushes seemed alive with hares and rabbits;—twelve couple of spaniels were hunting beautifully among the fern and long grass before us, while the partridges rose in packs from the more open spaces, which in this part of the forest are both large and frequent. Four woodcocks were flushed amid the whirring of pheasants and the rush of the partridges, two of which were brought to bag. One of those which escaped did so in a manner which I have often witnessed; being very shy, it was twice flushed without a shot, and marked down the last time near a large thorn, but our endeavours were fruitless to get another view of him. It is extremely rare that a cock will rise a third time, and I remember an instance of the kind in Aversley-wood, where one of the party, who was an old sportsman, had marked down a cock near a maple, and after we had beat for in vain for a quarter of an hour, we at length caught it under the said maple, in a decayed part of which, close to the root, the bird had crept, and was skulking. Whenever, therefore, it happens that a cock is thus lost the best plan to get a shot at him is to leave the place for some short time, and beat it closely on your return. I have practised this with success, although it was not attempted to-day, our route taking us to a distance from the spot. Shortly after this I fired at a cock—using No. 7 shot, the best possible size for woodcock shooting—and brought him down dead at sixty-two paces, a proof that you should always fire at a cock,—unless clearly beyond the range of your gun,—and that small shot are decidedly best with game of this kind, and generally so with most others.

Our sport continued with little interruption until four o'clock, when having had a day's excellent sport, we came back to Nassington, where our horses were, from whence we returned to Oundle to dinner. There is an observation to be made in conclusion, and it is this:—that in cock shooting, in small woods, after having beaten them through, one beat,

should be taken at last round the outside. In an immense place like the forest this rule falls to the ground, as it is very rare that a bird reaches its boundary without being flushed near it and then marked down.

N. W.

## STRICTURES ON A RIDICULOUS FONDNESS FOR ANIMALS.

To the Editor of THE SPORTSMAN'S MAGAZINE.

SIR,—Though I regard dogs for their fidelity and attachment to their benefactors, I cannot approve of the conduct of those who give them a preference to human animals. A person in affluence, whose heart would be callous to the distresses of a neighbour and a fellow creature, is highly censurable; but when that person, deaf to the cries of human misery, shall feel her lap-dog with the choicest viands, she must appear detestable in the eyes of the world.

I knew a lady who a short time since discharged a servant for exercising the following piece of cruelty and fraud upon Pompey the Little; the wing of a capon was ordered to be given to the favourite quadruped, but the domestic insulted him with a leg. A discovery of this imposition was made, and Tom was instantly turned away, with the following menace or remonstrance. "Have I not repeatedly charged you never to presume to give any thing but white meat to my dear little idol? Have you not frequently heard me say, that gross food created flatulencies in his delicate bosom? You know not the sufferings which your audacity may have brought upon my poor angel! Prepare this moment for your departure from my house. I would not keep such a monster for the universe; and to teach you better behaviour for the future, this circumstance shall not be suppressed, if I should be applied to for your character."

I remember to have heard a story which may not be inaptly introduced upon this occasion. An old lady wishing her deceased Caesar to have a Christian burial, hired a person to dig a grave and inter him in the church-yard: the cemetery being a little distance from the town, this task was performed in the middle of the night, and the grave-digger imagined he had escaped detection. But he was mistaken; the fact was communicated to the vicar, and he ran to the disconsolate lady to upbraid her for sacrilegiously burying a dog in a consecrated ground. The lady's answer was laconic, she presented a bank-note of twenty pounds to the enraged priest, assuring him that the dog had bequeathed him that sum as a legacy. His reverence made his bow and departed, and the ashes of Caesar were suffered to remain in hallowed earth.

This extravagant fondness has been extended to other quadrupeds, as well as dogs. We are informed in Roman story, that the Emperor Caligula was extravagantly fond of a particular horse: he invited him to supper, fed him with gilt barley, and caused wine to be presented to him in vessels of gold; he ordered him to be covered with high purple, and adorned with a collar of pearls, and a stable of marble to be erected for him, furnished with an ivory manger; on this horse he also bestowed an elegant mansion, magnificently furnished, and provided him with a number of domestics, to enable him to entertain his friends in the most sumptuous style. He swore by the life and fortune of this animal, made him a priest, and promised to make him consul; which promise he perhaps would have performed had he not been killed soon after, by Cassius Chereas, captain of his guards, and other conspirators.

But let it be considered, that neither the dogs which I have mentioned, nor Caligula's horse, should have any blame imputed to them. It does not naturally follow that because I treat my dog improperly, all other dogs should suffer by it, and that a statute should be therefore framed which would almost extirpate the whole race; or that because Caligula's folly was so extravagantly displayed in honour of his horse, that all such noble animals be despised! Dogs and horses in their proper places, the stall, the kennel, and the field, shall ever find an advocate in

Your most humble Servant,

Hampton Court, December 5th, 1845.

PHILO-CANIS.

THE ROBIN OF LINCOLN MINSTER.—This bird (probably a pious descendant of the old visitor), which for so many winters has taken up its abode in the cathedral, has commenced its carolling rather early this season. On Sunday afternoon, the 12th instant, it was seen flitting about the choir, sometimes perched in the carved work surmounting the bishop's throne, then flying off to the altar screen, chirp a few short notes until the organ pealed forth the commencement of the psalm, when it warbled aloud in accompaniment of the chanting, and frequently after added its melody to the choruses, especially when the boys were singing; grateful probably for the scattered crumbs which they bring to it, or finding the alto of their youthful voices more accordant with its own notes than the deeper tones of the tenor and bass. Robin is generally "residential" during the winter season, and either from long practice or good teaching has learned to conduct itself very passably. The bird seldom does more than chirp a note or two during the prayers or the lessons, but for this forbearance considers itself fully entitled to *ad libitum* whenever the choir and organ give the tone. Some years ago a surly verger endeavoured to shoot poor Robin, as an intruder and a nuisance; but all who love the Robin (and who does not?) will rejoice to learn that, though carved work and glass sustained damage, the pious bird escaped.—*Lincoln paper.*

## NOTICE!

THE PROPRIETORS, in consequence of the unexpected demand, have found themselves under the necessity of reprinting THE ALMANACK and with it NUMBER 28 of THE MAGAZINE which they will still continue to keep on sale for a few weeks, at the price of THREEPENCE together.

N. B.—This is done in order to keep faith with many Subscribers, who have failed in procuring their numbers owing to the increased demand. The Almanack may also be had, strained on linen, varnished, and with neat roller, for suspending in Parlours, &c. Price 2s. 6d. each.

## CORRESPONDENTS.

- J. L.—n, Limehouse.—Sponge or syringe the nostrils with a weak solution of alum, or sugar of lead (i.e. Goulard water). Are you sure your dog has had the distemper? Give him two grains of opium and five grains of tartar emetic (an invaluable medicine) every third night. The ingredients may be mixed in butter, or concealed in a small piece of meat. If the running at his eyes continues, syringe his nose twice a day, as above, and keep him on a light, warm liquid diet, as thick gruel, with meat liquor, &c.
- W. B., Manchester.—We have looked at the file of *Lell's Life* for September, 1834, (that was Touchstone's year), but cannot find any record of the pedestrian feat of "the Rabone youth" in that month. You would be more likely to find it in the file of a country paper: could you not discover where a file of the Stafford paper, or else the *Wolverhampton Chronicle* is kept? That is the only way to decide it. If we should by chance (for it would be an endless task to search for it), light upon the performance we will let you know.
- A. SUMMERB.—Ball's pond & Fifty-two numbers will complete the volume. Training and breaking Spaniels will form an early subject for a paper.
- Z.—ARKWRIGHT is engaged in a SWEEPSTAKES of 100, h. fl., for three-year-olds, which will be run on Tuesday, April 14th. He is also in the Thursday's Sweepstakes, both at the Newmarket Craven Meeting, 1846: he therefore has engagements before the Derby. MALCOLM also in the DEE STAKES, at Chester, (May 5th). QUEEN ANNE (b. t. by Slane, out of Garcia) we believe is not entered previous to the Oaks. Vanish (Sir C. Monk's) is by Velocipede, out of Garland.
- J. ENDERT.—We will answer you in our next.
- R. S. B.—THE PARTS of the Sportsman's Magazine are all procurable. We have only a few of the stamped edition of No. 18 left.
- J. W., Dumfries.—Neither Fatalist nor Mysinda are to be found in the Racing Calendar, or its Index, for 1840. Nor is there such a horse as Fatalist in the entries for Liverpool that year, in either July or Autumn Meeting.
- H. R.—BILLIARDS.—If the striker touch a ball that is not at rest, the stroke is foul.
- E. SWINDON.—The female bullfinch answers the purpose of a call-bird, just as well as the male. You will find a series of British Song Birds, with full directions for their management, in the earlier Nos. of the SPORTSMAN'S MAGAZINE.
- C. L.—Bechstein's Cage Birds is translated by Professor Rennie, and may be had of Messrs. Orr and Co., Paternoster-row. If we told you the price, Somerset House would charge us 1s. 6d. duty for an advertisement: there are perils, you see, in paper and print, and people that look sharp after the revenue.
- J. C. H.—The Newswriter's excuse is an evasion. The ALMANACK and No. 28 of the Magazine, are both sold with the full allowance to the trade.
- SIBSON, Manchester.—Charles Jones is a 10 stone man; he is thirty-one years of age, and has fought twenty-three recorded prize battles. The affair with Biddulph we decline giving any opinion upon, in the absence of better evidence. "The Ring's" worst enemies are in its own "circle."
- DRAUGHTS.—W. R., Leeds.—A cannot decline off without the consent of B, but he may object to B's time, which is nearly the same thing, as no day was fixed.
- BILLIARDS.—R. P.—Your friend having betted that he scored, loses, as by his making a miss you score.
- A. COCKNEY.—Ben Burn is still living; it is a proof that a good licking does not shorten life; he was well thrashed by Dogberry, Silverthorne, Palmer Jones, Tom Spring, and Tom Oliver, and yet grins in green old age.

## OUR WEEKLY CALENDAR.

- SUNDAY, Dec. 14th.—Isaak Walton died, 1683.
- MONDAY, 15th.—Instinct of Rats. Sir Robert Peel sets a trap for Brougham, who smells the salary, and declares it is not quite "the cheese."—Seventy pages of the "Gazette" filled with railway notices, 1844. Ah! seventy pages to carry the railway trains!—Earl Stanhope died, 1816.
- TUESDAY, 16th.—Leyland (alias Chip), of Bury, and Charles Westhall, of London, run 180 yards, 50l. a side, Loughborough, Leicestershire.—"O Sapientia" say the Almanacs, and, funnily enough, Cambridge Term ends! the joke is rayther foggy.
- WEDNESDAY, 17th.—Scully and Welsh fight (home circuit).—South Lancashire Coursing Meeting (and 18th).—EMBER WEEK.—Oxford Term ends.—WORTH REMEMBERING.—How to Purify Water.—Pounded alum possesses this quality. Put a table spoonful of it sprinkled into a hogshend of water, and stir it well; after a lapse of a few hours, the impure particles will be precipitated, and the water will possess the freshness and character of the finest spring water. A tea spoonful will purify a pailful of four gallons.
- THURSDAY, 18th.—March (Cambridgeshire) Coursing Meeting (and 17th and 19th).—Altcar (Open).—South Devon Steeplechases.—Wildfowl Shooting in high perfection.
- FRIDAY, 19th.—The remains of the Emperor Napoleon, after being brought from his island grave at St. Helena, were on this day (1840) deposited in the church of the Invalides at Paris with extraordinary pomp.
- SATURDAY, 20th.—Birds.—Small birds, especially of the finch tribe, creep near our dwellings for shelter and food; the little wren sings amongst the snow; and our old friend robin is musical in all weathers. Very few insects are seen.—£30,000 shares of the Thames Tunnel sold for £30. Any one, since the opening, being able to run through the hole of the property.

THE present state of the Sporting World, so far as regards the news department, is indeed a blank; not so the various pursuits of the individual Sportsman. Foxhunting is in its zenith: the tickets echo to the rapid detonations of the cock shooter; the marshes swarm with the aquatic tribes; the woody glen is visited by the shy woodcock; the whirling pheasant soars in the teeming preserve; the troller rejoices in his capture of the fierce pike; pedestrianism is rife throughout town and country; and albeit the Ring somewhat pauses for the lack of good and scientific men, a pretty tolerable list of minor matches are exhibited by "the Fights to come," recorded in the bill of fare for the next two months. Above all, Coursing is in its highest and palmiest state; and although the "terrible high-bred cattle" are heard of only in the betting lists of Tattersall, and the reports of trainers, there is activity and variety and promise of sport on the books for 1846, fully equal, if not exceeding, all the years that have gone before it. The staghounds, too, are out; some steeplechases are yet due, and, take it all in all, the sportsman, though "great events" are not on the book, loves the season, and rejoices in its return. For ourselves we trust we show no flagging spirit, and while with pencil and with pen we seek to amuse and instruct, we ask a share of that favour which it shall be our pride and study to deserve. The days of "merry Christmas" approach, and as the guerdon of some effort, and we trust we may add, some achievement, in the way of placing within the reach of all classes, a cheap and good SPORTING MAGAZINE, we ask the "compliments of the season," in the shape of a "Christmas Box." The form of our asking, too, we shall so shape that it shall not prove humiliating to ourselves, nor onerous to those kind patrons who have hitherto supported our venture. We hate prolixity; and therefore, without circumlocution, thus frame the request. Heavy expenses, and a circulation which, although extensive, barely covers the outlay, impel us to reiterate a solicitation. Will each subscriber, who has hitherto patronized the SPORTSMAN'S MAGAZINE, and found therein matter which has met his approval, recommend the work, so as to procure one more subscriber among his acquaintance? This surely would be no difficult task; 'tis of units thousands are made; and we pledge the credit of the work, wherein we have ventured our cash, care, and credit, that the improvement in its embellishments, mechanical execution, and literary contents, shall fully keep pace with its increased sale. We prefer this mode to empty promises, so lavishly given, and so seldom kept. If "we have done the sport some service," let sportsmen thus acknowledge it, and we shall be indeed content.

And now a word of what we are doing and have done. The series of Song Birds in the early numbers; the illustrations of Sporting Natural History throughout, and yet in progress; the Portraits of celebrated Sporting Characters; the series of dogs; the cuts of cups, winners, and races, regattas, &c., we have already given, shall be surpassed in execution and variety, if the patronage we experience should increase so as to justify the outlay, till this THREE-HALF-PENNY Magazine shall hold its head in variety of embellishment and sterling value of contents as high as aught of higher price and pretension yet before the public: but to this, we repeat, circulation is as necessary as to the vital vigour of the corporeal body. Lastly we may point, with some pride, to the first and only COMPLETE HISTORY OF BRITISH BOXING ever published now progressing in these columns.

Thus much for the past. For the future, we have already in the hands of a competent artist A SERIES OF FOX-HUNTING SCENES; exhibiting every varying phase and changing feature in the pursuit of sly Reynard, from "the kennel door to the Cover-side;" "the Meet;" "the Find;" "the Break-away;" "in View;" "Full Cry;" "at Fault;" "the Check;" "the Cast;" "The View-halloo;" "The Mishap;" "A Call for the Clippers;" "The Select;" "Reynard's last Shift;" "The Death!" "Who-hoop!" Each of these scenes will form a picture, accompanied by illustrative prose and verse, embodying a complete PANORAMA OF A FOXCHASE, which it shall be our fault if we do not, with due encouragement, make, both in text and cuts, worthy of the patronage of the Subscribers to the SPORTSMAN'S MAGAZINE. Forward our endeavours then, kind reader, do your part and we will do ours; and although we "cap you" before the chase, remember upon you depends the spirit of the Sport we have to offer.

We've seen and heard strange things since first we made  
Scarce nine moons since, our modest "opening speech,"  
Jostled by "Stags," and "Railway Kings" whose trade  
Absorbs all thought and leisure while they preach,  
And long ears listen to their vain parade  
Of fortunes to be had. May we beseech  
Now that their schemes have had their little day,  
The Sporting World to listen to our say.  
Men of no money, and even moneyed men  
Cajoled by rails have now full cause to rail,  
"All is not gold that glitters;" nine in ten  
Have found in scrip the scripture promise fail,  
And that the wind is all "untampered" when  
"Shorn" to the quick, for "ready" paper frail  
Alone remains, as set November suns,  
With Christmas promises of debts and duns.

So be it. Treacherous Mammon slipped their clutch;  
Greedy of wealth they find its loss their woe,  
Quitting true joys, which ne'er lie in "too much,"  
They've sought the shadowy gleam, and for the show;  
Forsook the substance; shall we feel one touch  
Of pity for those knaves whose "toil and trouble"  
Is but to blow or burst some city bubble?

These are not sportsmen's joys—no, *they* ne'er fail  
'Tis Nature's law, and giv'n to recreate all:  
*Spring* shall not have its cowslip, snow-drop pale,  
Nor shall its dews on vegetation fall,—  
*Summer* shall lose its roses, and bewail  
Absence of flowery crown, and birds' sweet call,—  
*Autumn* shall see no corn, no fruits produce,  
And *Winter* be not—when Sport finds disuse!

### GALLERY OF SPORTING CELEBRITIES.—NO. VII.

COLONEL PEEL.

Who that has peeped in at Tattersall's can avoid recognizing the acute, enterprising, active minded sportsman, whose whole length portrait imprints itself before us? And who is there that ever took an

interest in the "rivalry of flying steeds" that is not as familiar with the name of this eminent member of the Jockey-club as with the merest household word? The spirited brother of our astute and somewhat shifty Premier needs no other introduction but his name—for a more energetic and upright mind never devoted itself to the excitingly complex and hazardous arrangements of the turf.

In the training stables of Colonel Peel all is admirably and quietly ordered. William Cooper, of Newmarket, his trainer, is a man to be relied upon, and he is relied upon. J. Chapple,—and those who ride in his trials,—are not permitted to breathe a syllable. No two year olds, at the time of the Newmarket October meetings, are brought out in more racing like a form than those of the Colonel. With this early and careful preparation he carries off (when he has a colt or filly of promise) several of the most valuable stakes. That the animal is none the worse for these youthful spirts is clear enough; for Ion, who ran several smart races in the October meetings,—trained on for the Derby;—and Grey Momus, who was worked liked a coach horse, in all the fast concerns at the end of the year,—came out improved—strengthened, and freshened in the spring. Ion was a clever unfortunate horse to the Colonel, yet, with a large field of inferiors for the Derby, he met with Amato!—and with a small cluster for the St. Leger, he found a victor in Don John! If horses were duellists, Ion would be invaluable;—for he proved a practised and experienced second!

Colonel Peel is not fortunate in his two year old progeny of Slane this year; and he is, consequently, not found as a nominator for the Derby or St. Leger of next. He has, however, three fillies from that fashionable stock in the Oaks for 1846.

We do not know any one who, from his independent character, ardent love of the turf, and steady spirit in the management of his stud, more deserves to have his name chronicled as a winner of a Derby, an Oaks, or a St. Leger.

His year, 1844, with Orlando will long be remembered, on account of the Running Rein fraud, and the gallant Colonel's spirited conduct therein, for which he deserves the heartfelt of every true lover of the turf.

### FISHER'S CREEL.

#### A SAY ABOUT TROLLING AND WINTER ANGLING.

(Concluded from p. 476.)

To bait this hook you must have a brass needle, about seven inches long; put the loop of the gimp on the eye, or small curve, of the needle then put the point of the needle in at the mouth of the fish, and bring it out at his tail; bring the gimp and wire along with it, the lead being fixed in the belly of the bait-fish, and the hook or hooks lying close to the outside of his mouth; then turn the points of the hooks towards his eyes, if a double hook, but if a single one directly in a line with his belly; next tie the fish's tail to the arming wire very neatly, with strong thread; to the line on your reel you must attach a gimp trace 24 inches long, having a swivel at each end, and one in the middle. The spring swivel at the end of your line is to be hooked on the loop of your baited trace, and you are ready for sport.

When you are thus prepared drop in your bait lightly before you, then cast it on each side, and let the third throw be across the river, or as far as you can reach, still letting the bait drop in lightly. In each cast let your bait fall nearly to the bottom; then draw it up gently towards you, and again let it sink and rise till you draw it out of the water for another cast. When you feel a run, let your line be perfectly free, and allow the fish to make for his haunt without a check; and when he stops give out a little slack line. Give him ten minutes to pouch the bait before you strike, which you may then do, by first gently drawing in your slack line, and then striking gently; but should your fish move soon after he has been to his haunt, give him line, and he will stop again; but, after this, if he move a second time before the ten minutes are expired, strike, and you will most likely secure him; but if he has been only playing with the bait you will have lost him. Angling at the snap must now be described. The spring snap was formerly much in use, and may now be purchased at any of the tackle shops. It consists of three hooks, the upper one small, and the two lower hooks large. The spring confines the lower hooks, but the spring gives way and the hooks spread out when the fish is struck, and hold him securely. It is baited by introducing the point of the small hook under the skin of the bait on the side, and bringing it out at the back fin."

On this mode of fishing for pike, a sure and successful way, by-the-bye Mr. Salter is clear and explicit. He says:—"This snap-hook is a double hook, or two single hooks, No. 6, tied back to back, on gimp; to bait this snap, use the baiting needle, having first placed the loop of the gimp to which the hooks are tied in the eye of the needle. Enter the point of the needle just above the gills of the fish, near the back, avoiding to pierce the flesh as much as possible, as it is only intended that the gimp should lie just behind the skin; bring the needle and the loop of the gimp out near the tail, and draw till the hooks lie close to the part your needle entered, and are somewhat hid by the gills. The bait will live a long time after being thus hooked, and may be used in fishing with a float

by putting three swan shot on the gimp to keep it down; always prefer a gudgeon for this baiting. I call this a snap, because when fishing this way for jack I strike immediately I perceive a run and have met great success this way of snap-fishing. This snap may be baited with dead fish and trolled with."

In trolling with the ordinary trolling tackle—the pleasantest and best way of fishing for pike—the angler must make his casts in the manner recommended in trolling with the gorge-hook, letting the bait partly sink, and then drawing it towards him by gentle touches, by which means the bait will spin freely, and look bright and glittering in the water. When you feel or see a bite, let the fish turn, and then strike gently, but still with sufficient quickness and force to make your hook hold; and now, with patience and perseverance add to these instructions, a complete disregard of cold and wind, and a determination never to lose his temper at trifling disappointments, the tyro will soon become a master. The following is the easiest, and by no means the worst, of all ways of angling for pike. You use a live bait, and "the hook is baited by passing it through the fish's lips, or beneath the back fin; a large cork float is used, and a gudgeon is considered the best live bait. Two or three heavy shot will be necessary to keep down the bait, which should, swim about mid-water. When a fish bites he must be suffered to run to his haunt, and ten minutes allowed him to pouch the bait, as in trolling with the gorge-hook."

We append, as a figure is often more explanatory than verbal description, the figures of four kinds of trolling hooks:—

1. DEAD SNAP TROLLING HOOK.

2. DROP LEAD TROLLING HOOK.

3. DEAD TROLLING HOOK.

4. SPEAR TROLLING HOOK.

Thus far some of our best authorities on trolling. In the next paper we will pursue the subject; together with winter fishing generally.—We append the letter of a correspondent detailing:—

#### A DAY'S PIKE FISHING AT ALT CAR.

SIR,—Your paper being open to the communications on field sports, you will perhaps pardon me for attempting to give you an account of a day's pike fishing, which I enjoyed early in October, in some ponds in Altcar. On the afternoon of the 4th I provided myself with baits, viz. twelve roach, from four to five inches long; sharpened a favourite gorge hook, with which I have killed many heavy fish; and got all my tackle completely in order, intending to set out by sun rise. I did so, and as I approached the scene of action, my hopes of success were considerably augmented by a steady breeze which blew as much to my mind as possible, I therefore, redoubled my speed, not entertaining a thought but that I should have excellent sport. The water did not remain unnodded as I was putting my tackle together, and I perceived that it was of an excellent colour. I fell to work immediately, and began to cast in search with the wind at my back, as directed by you in your articles on angling, but with no success. I tried all the ponds round to no purpose, and began to feel disappointed, and judge of my vexation, Mr. Editor, when I was told by the gamekeeper, who that moment came up, that the water I was trying had been netted about a week before, by some poachers, I had then nothing to do but to make a trial of the other ponds, for there were several in the neighbourhood, all fed from the same source, namely, a rivulet. The second fulfilled my expectations, for I had scarcely cast in my bait and drew it to the surface, before I perceived a

jerk at the line, and had an excellent run, the fish dashing across the pond, therefore convincing me that it was well on the feed, and roving about; it lay still five minutes, then made a sudden rush into the middle of the pond, and threw itself a considerable height out of the water, by which means I perceived the size of my game to be considerable. I immediately wound up the line and held on the pike with a tight hand, for I was confident my tackle was good—and though my captive plunged and was very desperate, the taking him afforded me no little pleasure, I assure you. In the course of half an hour, I succeeded in landing my prize, and it proving a male, I lost no time in trying for the female. In half a dozen throws I had another run, and the fish went into the same haunt as the first had fled to. In due time, I struck, played, and landed the fish, which proved to be a female, but not so heavy by four pounds, as the first I caught, which weighed nine. I continued to angle with tolerable success till ten o'clock when I returned home and opened my bag, the contents of which were three brace and a half of pike, the total weight thirty-five pounds. As trolling is very laborious, and labour generally begets appetite, I had a keen one I assure you, and I satisfied the craving of hunger with one of those fish who had that morning lost their lives, in endeavouring to appease that biting pain. Should this account meet reception in your amusing publication, it will please me much; should it not, I must be content, and remain your sincere well wisher,

GEORGE AUSTIN.

#### WRINKLES FOR THE GROOM.—NO. IX.

##### ON SHOEING AND THE STRUCTURE OF THE FOOT.

TO comply with the request of several correspondents, we have decided on giving a brief, and, we trust, plain and instructive treatise on this important portion of veterinary knowledge, premising that we write not for the enlightenment of those who make the art a professional study; far from it. Our object is merely to impart that amount of general knowledge in plain and perspicuous language which may serve the purpose of those who seek instruction on the subject which occupies our pen.

Our first remarks shall be extracted from a somewhat antiquated treatise (yet none the less practical or excellent on that account, by Mr. Clarke.

##### ON SHOEING.

In preparing the foot for the shoe, the frog, the sole, and the bars, or binders, are pared so much, that the blood frequently appears. The shoe, by its form, (being thick on the inside of the rim, and thin upon the outside,) must of consequence be made concave or hollow on that side which is placed immediately next the foot, in order to prevent its resting upon the sole. Shoes are generally of an immoderate weight and length, and every means is used to prevent the frog from resting upon the ground, by making the shoe-heels thick, broad, and strong, or raising cramps or calkins on them.

From this form of the shoe, and from this method of treating the hoof, the frog is raised to a considerable height above the ground, the heels are deprived of that substance which was provided by nature to keep the crust extended at a proper wideness, and the foot is fixed as it were in a mould.

By the pressure from the weight of the body, and resistance from the outer edges of the shoe, the heels are forced together, and retain that shape impressed upon them, which it is impossible ever afterwards to remove; hence a contraction of the heels, and of course lameness. But farther,

The heels, as has been observed, being forced together, the crust presses upon the processes of the coffin, and extremities of the nut-bone; the frog is confined, and raised so far from the ground, that it cannot have that support upon it which it ought to have; the circulation of the blood is impeded, and a wasting of the frog, and frequently of the whole foot, ensues.

Hence proceed all those diseases of the feet known by the names of founder, hoof-bound, narrow heels, running thrushes, corns, high soles, &c.

I have likewise frequently observed, from this compression of the internal parts of the foot, a swelling of the legs immediately above the hoof, attended with great pain and inflammation, with a discharge of thin, ichorous, fetid matter; from which symptoms, it is often concluded, that the horse is in a bad habit of body, (or what is termed a grease falling down,) and must therefore undergo a course of medicine, &c.

The bad effects of this practice are still more obvious upon the external parts of the hoof. The crust, toward the toe, being the only part of the hoof free from compression, enjoys a free circulation of that fluid necessary for its nourishment, and grows broader and longer; from which extraordinary length of toe, the horse stumbles in his going, and cuts his legs; at the same time, the smaller particles of sand insinuate themselves between the shoe and the hoof, at the heels, which grinds the latter away, and thereby produces lameness. All this is entirely owing to the great spring the heels of the horse must unavoidably have upon the heels of a shoe made in this form.

This concave shoe, in time, wears thin at the toe, and, yielding to the pressure made upon it, is forced wider, and, of consequence, breaks off all that part of the crust on the outside of the nails. Instances of this kind daily occur, inasmuch that there hardly remains crust sufficient to fix a shoe upon.

It is generally thought, that the broader a shoe is, and the more it covers the sole and frog, a horse will travel the better; but, as has been formerly remarked, the broader a shoe is of this form, it must be made the more concave; and, of consequence, the contracting power upon the heels must be the greater. It is likewise to be observed, that, by using strong broad-rimmed concave shoes in the summer season, when the weather is hot, and the roads very hard and dry, if a horse is obliged to ride fast, the shoes, by repeated strokes (or friction) against the ground, acquire a great degree of heat, which is communicated to the internal parts of the foot, and, together with the contraction upon the heels, occasioned by the form of the shoe, must certainly cause exquisite pain. This is frequently succeeded by a violent inflammation in the internal parts of the hoof, and is the cause of the disease in the feet, so fatal to the very best of our horses, commonly termed a founder. This is also the reason why horses, after a journey, or a hard ride, are observed to shift their feet so frequently, and to lie down much.

If we attend further to the convex surface of this shoe, and the convexity of the pavement upon which horses walk, it will then be evident, that it is impossible for them to keep their feet from slipping, especially upon declivities of streets.

It is also a common practice to turn up the heels of the shoes into what is called cramps or calkins; by which the weight of the horse is confined to a very narrow surface, viz., the inner round edge of the shoe rim, and the points or calkin of each heel, the latter of which soon wear round and blunt; besides, they for the most part are made by far too thick and long. The consequence is, that it throws the weight of the body forward upon the toes, and is apt to make the horse slip and stumble. To this cause we must likewise ascribe the frequent and sudden lameness horses are subject to in the legs, by twisting and straining the ligaments of the joints, tendons, the bending of the knees forward, and that stiffness and contraction of the tendons which is observed in those horses who have been accustomed to calkins on their shoes.

I do not affirm that calkins are always hurtful, and ought to be laid aside; on the contrary, I grant that they, or some such like contrivance, are extremely necessary, and may be used with advantage upon flat shoes, where the ground is slippery; but they should be made thinner and sharper than those commonly used, so as to sink into the ground, otherwise they will rather be hurtful, than of any advantage.

The Chinese account a small foot an ornament in their women; and for that purpose, when young, their feet are confined in small shoes. This, no doubt, produces the desired effect; but the main intention is to make them more sedentary, that, not being able to walk but with difficulty, they are obliged to remain in their apartments.

This practice very much resembles our manner of shoeing horses; for, if we looked upon it as an advantage to them to have long feet, with narrow low heels, and supposing we observed no inconvenience to attend it, or bad consequence to follow from it, we could not possibly use a more effectual means to bring it about, than by following the method already described.

In shoeing a horse, therefore, we should in this, as in every other case, study to follow nature: and certainly that shoe which is made of such a form as to resemble, as near as possible, the natural tread and shape of the foot, must be preferable to any other.

But it is extremely difficult to lay down fixed rules, with respect to the proper method to be observed in treating the hoofs of different horses, especially those who have been accustomed to concave shoes. It is equally difficult to lay down any certain rule for determining the precise form to be given to their shoes. This will be obvious to every judicious practitioner, from the various constructions of their feet, from disease, and from other causes that may occur; so that a great deal must depend upon the discretion and judgment of the operator, in proportioning the shoe to the foot, by imitating the natural tread, to prevent the hoof from contracting a bad shape.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBE.

## CHAPTER XI.

JACK SCROGGINS,—(continued.)

From this triumph, Scroggins rose rapidly in the esteem of the best patrons of the ring; being considered one of the best "little men" of the day. Scroggins was scarcely known up to this time to the scientific circles, and his rambling mode of fighting so peculiar to himself, was rather the subject of mirth than serious discussion; still it was thought, in some instances, that he exhibited the prominent traits of the once terrific Hooper—a method that would not be denied from boring in, and, when once in, must triumph from its close and heavy half arm deliveries; except in very rare instances. Although Nosworthy was defeated, it was viewed as a determined and skilful battle on his side. The springing hits of Scroggins were truly tremendous; and covering his his head with his left hand, not only prevented him from receiving much punishment at going-in, but gave him additional vigour in *smashing* his adversary.

Scroggins, it was urged, had offended several of his patrons, in consequence of his insisting on the whole of the battle-money of the late fight being given him; and many of them felt determined, if possible, to select a scientific boxer, who should take the fight out of our hero. *Bill Eales* was therefore selected, and backed for this special purpose; but the knowing ones, were much divided in opinion, respecting their merits. Two of the most complete adepts in the ring took them under their care or training. The sporting knowledge of Gully has rendered him at all times, in the ring or on the turf, no mean judge how to select his object, or to lay out his money; and Tom Belcher's experience had taught him too well too know the value of blunt to give half a chance away: therefore, when Gully selected Scroggins as his favourite, and Belcher preferred Eales as the most competent pugilist, it might not be inaptly observed, that "Greek met Greek," and "then came the tug of war!" The backers, as well as boxers, it was certain, meant to win if possible. Eales was remarkable for his complete knowledge of the tactics of the milling art, and possessed the important advantages of height and length; while Scroggins was a non-descript, who disdained copying the mode of any pugilist, and fought after his own method—if method it could be termed.

On Saturday, August 26, 1815, near the George at Kingston-hill, contiguous to Coombe-warren, this interesting and singular match was decided. At an early period in the morning, the various roads leading to the scene of action were crowded beyond description. All sorts of vehicles were so close upon each other, as to defy enumeration; and pedestrians numerous beyond precedent. A great many high personages mustered on the turf, among whom Earl Yarmouth, Lord Fife, Hon. Berkeley Craven, &c. were observed. A few minutes before one the men entered the ring, attended by their seconds. Tom Belcher and Harmer for Eales; Joe Ward and Oliver for Scroggins. The spectators were struck with the great contrast between the size of the combatants. Joe Ward tied the colours of the sailor, "true blue," to the stakes, as a token of defiance; and Belcher knotted over it the *yellowman*, as the colours of Eales. Both the men looked well and confident: the ceremony of shaking hands being gone through, the set-to immediately commenced.

## THE MILL.

1. From the scientific pretensions of Eales, it was generally expected the first round would clearly evince his superiority over his short and sturdy opponent. Scroggy, however, with all the heroism of a British tar, boldly bore down to the assault. The display of Eales, although more scientific than effective, was much admired; Scroggins, equally anxious to commence the fight favourably on his side, exhibited some degree of caution. Eales let go once or twice, but beyond effective distance; at length Scroggins put in a well-directed blow under the left ear of his opponent, and, in closing, threw him. [The odds looked rather queer, and Scroggins was pronounced the favourite.]

2. This round was decisively in favour of Scroggins, who exchanged blows with his opponent in the most gallant style of courage, till Eales was, at length, felled.

3. Both the combatants were now alive to the interest of the scene in which they were engaged. A good rally occurred, and they returned and exchanged liberally, in the rally Eales went down.

4. This was altogether a severe round. If Scroggins planted some severe blows, Eales returned punishment with equal courage; strength was evidently on the side of Scroggins, who appeared merely getting into work; while Eales, on the contrary, showed symptoms of weak constitution, and fought till he again went down.

5. Eales, notwithstanding his superior science, could not make that sort of impression upon his opponent, which was expected by his friends. He succeeded, it is true, in dexterously putting in some heavy blows, which the hardy tar was not a degree behind-hand in returning, keeping up a battering rally, till his opponent went down.

6. The strength of Eales did not keep pace with his judgment; he, nevertheless, evinced good pluck. This was a pantomimic round altogether a piece

of harlequin and clown antics all round the ring. Eales exerted his best skill to obtain a favourable turn, and a terrific rally ensued; but, in closing, the singularity of Scroggins excited roars of laughter; in throwing Eales he went down, then rolled over and over from his adversary till he rose upon his legs with all the caricature of a merryman. (Eales displayed weakness; and the odds were 5 to 1 on Scroggins.)

7. The combatants soon fought their way into a sharp rally, and the science of Eales prevailed to a certain extent, till Scroggins went down. (Applause.)

8. A little discretion seemed necessary on both sides; some sparring occurred before a hit was made. Scroggins bobbed his head to avoid the threatened blows of his opponent, but returned fighting hand over head. The punishment was severe in this round, but reciprocal, however, Scroggins went down.

9. The combatants attacked each other with the most determined resolution; anything like stopping was out of the question, till they both found themselves upon the ground. Eales could not lay claim to any advantage; neither had Scroggins the worst of it.

10. Another equally desperate round followed, and a tremendous rally took place. The blows on both sides did great execution; and punishment without stopping, was the order of the day.

11. Eales, notwithstanding the exertion of the last round, came up to the scratch with considerable spirit, and showed off in such good style upon his opponent, that Scroggins again dropped his nob to escape the milling intended for him.

12. The science of Eales was exhibited to great advantage, and Scroggins's upper works seemed under the direction of a chancery practitioner, till he was sent under the ropes. The round was contested with much resolution on both sides.

13. Eales again tried the chancery suit with some success, by planting three severe hits on the nob of Scroggins; but the latter, determined not to be deficient in this part of the practice, most liberally returned the favours which had been bestowed upon him, and also concluded the round by cross-buttocking his antagonist.

14. The spectators now perceived that Scroggins was too much for Eales, as the strength of the latter was evidently on the decline every round. Scroggins punished Eales in all directions, and gave him three heavy hits on his nob, stomach, and neck. In closing, both down, but Scroggy fell upon Eales with velocity enough to send the wind out of his body. (7 to 1 on Scroggins.)

15. The advantages of strength appeared completely on the side of Scroggins, who came up to the scratch smiling with confidence, that he had little more to perform to render victory certain. Eales, although weak, fought with much spirit, and contested every inch of ground in a sharp rally, till Scroggins again threw and fell upon him.

16. Eales endeavoured to gain time by cautious sparring, but Scroggins fought his way pell mell into a sharp rally, and adopted the same mode as in the two preceding rounds, by tripping up his adversary, then falling upon him, to deprive Eales of what little wind he had left.

17. From the terrible heat of the sun, and the severe punishment both the combatants had experienced, it did not excite any degree of surprise to see them both brought to the scratch in an exhausted state. The little hardy tar, who had so often braved the various changes of climate, seemed, of the two, the least affected by the scorching rays that now pressed so heavily upon their persons, and commenced fighting with great spirit. In closing, he peppered Eales considerably, and then cross-buttocked him. (From this severe touch, it was expected Eales would not be able to meet his man again; and the poundage was offered, that Scroggins was the winner.)

18. Eales, though much exhausted, again opposed his man, but the chance was decidedly against him, and Scroggins threw him as before. (Any odds but no takers.)

19. The fight was nearly taken out of Eales, and it might be urged that he was almost at the mercy of his antagonist. He was again thrown.

20. Eales tottered to the scratch; but Scroggins gave him another cross-buttock as if a child had been opposed to his strength.

21. The strength of Eales was quite reduced as to effective punishment; but he, nevertheless, evinced good bottom, and did more than might have been expected, from one so nearly beaten. Scroggins laid himself open, but Eales was too weak to turn it to account. In falling, Scroggins went down upon him.

22. It was now a horse to a hen, and Scroggins threw his man with the most apparent ease.

23. Eales, to the astonishment of the spectators, once more appeared at the mark; but it was all up with him, and, by way of a quietus, Scroggins put in so tremendous a hit under the right ear of Eales, that he was felled like a shot. He could not come again, and the battle lasted 23 minutes.

Scroggins, in defeating a scientific boxer like Eales, completely astonished every amateur present; it was singular to observe the severity of his blows, and the punishment he administered to his opponent, although a man four inches taller than himself. Indeed our little hero was confidence itself; and, it seems, he assured his friends, previous to the battle, that he would win it and nothing else. As an in-fighter, Eales had decidedly the best of his opponent; but his distances were so incorrect at times in out-fighting, that numerous blows were thrown away. Some of the partisans of Eales attributed his loss to a severe hurt received on the back part of his head, in falling violently against one of the stakes of the ring; but the general opinion was, he lacked stamina to resist the finish-

ing qualities of his antagonist. Eales was the heavier man, weighing 11 stone and  $\frac{1}{2}$  lb. The bets never varied from the commencement of the fight; Scroggins was the favourite throughout. It was altogether a sharp contest; but a great deal of time was consumed in struggling to obtain the advantage in throwing. Notwithstanding the great superiority Eales had in standing over his opponent, united with his first-rate science, he could not prevent Scroggins from going in. The admirers of science were much disappointed at the defeat of Eales.

From the success Scroggins met with in his boxing career, and the numerous patrons of the art who rallied round him, he was enabled to commence publican; and accordingly opened the Waterman's Arms, at Stangate, Lambeth, for the entertainment of the sporting world. His house in summer time was pleasantly and attractively situated, commanding a view across the Thames, a part of the venerable Abbey, and Westminster-hall; the name of JOHN SCROGGINS, in large letters, at the top of the premises, might be seen from the other side of the river, operating as an inducement not only to sporting characters, but to many an old shipmate of the Argo to call and give our hero a friendly turn. He did not want for company of every description—peers and costermongers all contributed to make the pot boil; and, though Scroggy could not boast of the eloquence of a Cicero, yet he never suffered any of his customers to depart without receiving a ready answer. "Life," in a variety of shapes, was to be seen under the roof of this little caterer for the public.

In another part of his dwelling, the "saloon" was not the least importance in the picture. In ruder hands it was merely a skittle-ground, but, under the taste and judgment displayed by Scroggy, it assumed a new and prominent feature: a gallery was now added to it, in addition to its being boarded over for the accommodation of spectators, and embellished with chandeliers to illumine the scene. Every Tuesday night it was opened as a school for the art of self-defence; and here this remnant of the Olympic Games was conducted with the characteristic spirit of milling to overflowing audiences. Scroggins himself usually appeared as a first-rate actor, assisted by several other professionals, in most of these performances, to explain and render the art attainable, or, in other words, to beat it into the craniums of his auditors; and here many a novice was floored for his temerity, by way of initiation, as a sort of preparatory step to a better acquaintance with the practice and use of the gloves. The tipping for admission was upon a small scale, and with much liberality on the part of the proprietor, it was allowed as blunt of equal value for any liquor called for to the amount of the price of the ticket. The sporting dinners given by Scroggins were of excellent description; and the Waterman's Arms generally afforded considerable amusement to those persons who were disposed to take a peep at the fun and frolic there exhibited, under the management of this comic hero of the ring.

(To be continued.)

### Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 476.)

The next meeting sufficiently attractive for your readers, and indeed at all useful to record, was the BIBURY CLUB, June 25th. In a sweepstakes for 50 sovs. each, Cowl beat Columbus, which quite accords with the character I gave Columbus in my Derby reminiscences, of being a third rate horse. Queen Mab carrying 11st. 12lb (2 miles) won the Bibury Club Stakes, beating Ajax, Sorella, Hampton, and several others. THE CHAMPAGNE STAKES, for two years old, brought out Wits End, and West Countryman, both of whom beat the Free Lance, and the Pet colt by Venison. Mr. Wreford seems as anxious to perpetuate to the letter W as Lord Rivers was the letter R, or Napoleon N. Napoleon covered his palaces his furniture and even his throne with N; Lord Rivers could not find any other letter than R to begin the names of his greyhounds, so Rose, Ruby, Rollick, Roysterer, Runaway &c. echoed thro' his kennels, and certainly was just upon a par with Mr. Wreford in his names of Wilderness, Wilkinson, Wits End, West Countryman, and Worthless. A filly by Slane out of Mary Ann won a handicap: Arcanus won the Free Plate, but was beaten by Giantess for the Andover Stakes; a colt by Slane out of Adela beat some tolerable ones.

At STOCKBRIDGE, June 26th, Ægis beat Columbus and the Giantess for the G. H. Stakes 25 sovs. each. A singular sort of a race in heats, was won by Sparshot, (Capt Pettat) beating 10 others.

At the East Surrey, July 1st. The Star won the Victoria Stakes, and Gazelle the Rosemary and Albert.

At WINCHESTER, July 2, close upon the Bibury and Stockbridge, and in the neighbourhood of those courses, the Pet Colt ran in a handicap and was beaten by Redskin and two others. Ægis had a victory over Ajax for O. H. Stakes. Queen Mab won the plate. West Countryman, two years old, beat the three fillies, The Slot, Deerschase, and Camellia, easily. Giantess beat Ajax and others for the City Members' Plate. Misdeal carrying two stone more, beat Sir Francis and Young England, for a mile.

WORCESTER, July 2, had nothing of interest, Ninety-one, Mainstay, Nix-my-dolly, and Europa being winners.

At CARLISLE, July 2, a race for the Corby Castle Stakes, Ada, Lord Zetland's, beat Mr. Gill's Themis, both two years old. Pythia won the Cumberland Plate, beating Inheritress and Queen of Tyne. She was "well in." Poor Robert de Gorham broke down, and will not spear again.

On July 8, the NEWMARKET JULY MEETING opened with a poor affair between Paultons, Mocha, and Julian, who came in as I have placed them. This was succeeded by one of the most interesting races of the year, and the result placed Col. Peel's fillies in the favour they have for the coming Oaks. For the July Stakes then, nine two year old colts and fillies started, and after a false start, got away. The betting was in favour of Smuggler Bill, but he was challenged and fairly beaten by QUEEN ANNE; Tit-bit was third, and Mr. Gurney's Messene filly two or three lengths behind the winner, fourth. The Little Vulgar Boy, Colt by Colwick out of Toga, Moonbeam, Trebonius, and Gwynnau were in the race. In a match Science showed himself a "knowing one," beating Blanchie, although the "very clever ones" put 7 to 4 on Blanchie, both two years old. For the Town Plate, Hersey, who beat the Merry Monarch at Goodwood, also beat here Kesheng and a field, including Event and Ruff. For the Chesterfield Stakes five two years old competed, who came in in the order I place them. The were the Free Lance, Filly by Caesar, Guzman, the Mecca Colt, and Nell Cook.

At WORCESTER, July 8, Coranna won two races; and for a Sweepstakes of 10 sovs. each, Madcap beat Astonishment, Lord Harry, and Nannie; and in a subsequent race Lord Harry beat Astonishment, Nannie, and Dejanira, with some others. I will here just remark that I think both *Astonishment* and *Madcap*, as well as *Lord Harry*, have had rather too much work at two years old to suit me for the two great coming events. The same observation applies to *Malt*. I have no wish to dictate to your readers, or raise a prejudice against what they fancy; but I will just observe, that I have but little faith in young ones, which, after trying for a good stake, are made to waste their efforts in a 10 sovs. sweepstakes. Godfrey was a winner of 50 sovs., 15 added, in a handicap, beating Coranna.

At LANCASTER, July 9, Inheritress won the Plate, beating Hooton.

At STAMFORD, July 6, for a 20 sov. Sweepstakes, Tit-Bit beat Astonishment and Caesar filly by a head. For the Gold Cup, Plantagenet beat Wee Pet.

At LIVERPOOL, July 16, for the Croxteth Stakes, Vaudeville beat Mid-Lothian, Trueboy and Semiseria and three other good ones. For the Mersey Stakes, Luminary, not in the Oaks, beat Princess Alice, Birthday, Sotades, Andrew Brandy, and L'Hirondelle filly. The winner took the lead and kept it, and being by Launcelot out of Miniature, was no doubt a good one. A Free Handicap was won by Beaumont. The Tradesmen's Plate or Liverpool Cup, another great Sweep race, was won by Lothario with a good weight on him, beating a very large field, in which there were two knocked down, Rowena second, and Coranna third. Pug won the Queen's Plate, and Sweetmeat the Derby Handicap, beating sixteen others, including the best winners of the year. Mid-Lothian, three years old, won the Stanley Stakes, beating several two years old, Burlesque, two years old, being second; Birthday, a two years old, was a good third. Yardley won the Bentinck Testimonial, beating a good many, and in the race Mickey Free did nothing. For the Liverpool St. Leger, Mentor, after a severe race, beat Pantasia by a head, Vaudeville third, and the Baron fifth, Cinizelli fourth. It was this race, I am inclined to say, spoiled Mentor for the St. Leger. In a mile and three quarters, Sweetmeat beat Hope easily.

At DUDLEY, July 21, Princess Royal, by *Harkaway*, beat a tolerable lot. At Newton, July 23, Winesour, Lightning, and Little Hampton had a good struggle for the Gold Cup, beating a good many others, among them Ratan. I see a "*Ratan*" quoted for the Chester Cup, and a "*Ratan*" advertised to cover. Let your readers put this and that together, and judge accordingly. In the race just mentioned he was *no where*! For the Drawing Room Stakes, 2 yr. old fillies, only two came to the post, when the Slayer's Daughter beat Clara Webster. For the Golborne Stakes, 2 yrs. old, the colt by Stockport out of Manilla—I mentioned him in a former paper—beat Twig, Fitzwilliam, Lord Harry, all placed, and Brutus, Dolo, the Miss Thomasina colt, Seaham, and the Miss Fitz filly, not placed. Yardely won the Boro' Cup, beating Rowena, Brunel, and two others. Another victory, rather hardly won, fell to Sweetmeat, who beat Mid Lothian, Lancashire Witch, Pluto, and others. Sir J. Gerard's Cup was won by Coranna, easily beating Cœur de Lion, Parthian, Godfrey, and two others; the weights being heavy, none under 10 st.

At IPSWICH, July 23, Metal, by that capital horse Glaucus, won the Queen's Plate. Glee won two races here, and the Devil-among-the-Tailors a poor 30l.

At TEWKESBURY, July 24, there was nothing done of importance in the racing line, or any other; although a certain set of saints made it a very important office to distribute vulgar anathemas, in the shape of farthing tracts, against all horse-races; intimating vengeance on all those hapless sinners who attend them.

P.S. In No. 30 your readers will be so good as to omit "Beeswing;" not to make a stop after "Ascot," "the race between, &c.;" to read "Mann for "Marson;" "5 sovs." for "500 sovs.;" "Welcome" for "Molecomb;" "Emperor" for "Empress;" and "Milldew" for "Mildies."

## A FEW MAXIMS ON HUNTING WITH HARRIERS.

BY NIMROD.

I commence with finding the hare. If found in her form, let her be put off it as quietly as possible, and by all means avoid a view. A view has two evils. First, it makes hounds wild; next, it is, four times out of six almost immediately succeeded by a fault. Bring up your hounds as gently as you can, to the very form, indeed, in which she sat, and let them take up the scent without a word being said. The hare, also, has an advantage here; she is more likely to fly her country by not being too much alarmed at starting, and is less inclined to double and make work for the pack.

A general rule as to hallooing.—Never halloo unless you can give a good reason for so doing. A constant and indiscriminate use of the voice is very blameable in the huntsman. His hounds, by constantly hearing his voice, will soon learn to pay no more attention to it than they do to the singing of a lark, and will not come to him when they are wanted. Some huntsmen have a trick of incessantly singing out to their hounds when they are hunting, and carrying on a scent; the consequence is, that if they chance to come to check when he is not up, they will stand staring about for their huntsman, and will no more hunt without him, than oxen in Devonshire will work at a plough without being sung to.

At Check.—A bad habit of not casting, when at check, is given to harriers, by their huntsman always interfering the moment they lose the scent. Such interference, is bad enough in a huntsman, but still worse in any gentleman in the field, it being an established rule that no man shall hunt any hounds but his own. All that one of the field, at this time, may be permitted to do, is, to turn the hounds to the huntsman, should the whipper-in be thrown out.

When harriers have checked, a huntsman should turn his horse and allow his pack first to make their own cast. If he think the scent is behind him, let him move slowly backward; and if his hounds be good for anything, they will immediately cast round him. Let him attentively observe them, and whilst they continue casting with their noses down, he should not say a word to disturb them. When they have made their own cast, and failed to make it good, he may then interfere, and draw them towards him in the direction in which he may judge his game to be gone. Whilst casting, however, let him still attentively observe his hounds, and and if they are at work with their noses down, let him not say a word to them. Nothing is worse, nor more unsportsmanlike than a huntsman's casting his hounds and hallooing, when he sees them trying well for the scent, and in their proper places. Every halloo, in such a situation of affairs is, in effect, an attempt to make hounds lift up their heads, and look in his face, to ask what he wants them to do? Of the propriety of allowing harriers to do their work as much as possible, without the assistance of their huntsman, every man must be convinced, who has ever seen a regular pack of them at fault, which have been much accustomed to a huntsman's interference, and a few loose, or trencher-fed hounds, kept by two or three farmers for the sake of the pot, who have been used to hunt by themselves. One will not move without the huntsman; the others will keep on casting and flinging for the scent, for an hour, and generally succeed in recovering it. Circumstances, however, must be allowed to regulate us here, and there are times when harriers require holding forward quite as much as fox-hounds. Good hounds of either kind will seldom or ever leave a good scent ahead, unless the ground be feiled by sheep, or by coming on ploughed land, dry and hard roads, and such like. For this reason, a hare huntsman should never force his hounds on against their will, as it were, unless opposed by difficulties such as I have now alluded to; he should let them make their own cast, they being more likely to find out, than he himself is, in what direction the scent lies.

When harriers are casting of their own accord, their huntsman should be particularly attentive to them. He will then perceive what ground they have tried carefully, and what they have missed trying, or not tried closely; by this he will regulate his own cast.

When harriers check on a high road, or a dry footpath, their huntsman should always first cast back, on the line on which they have made good the point forward. By this means, the hounds will try on each side, if they are good ones; whereas, if he 'tries round,' as the term is, and casts his hounds all on one side of such road or foot-path, and the scent be on the other, he will make the check twice as long as it need be—not to add the well known fact, that harriers, unless under peculiar circumstances, casting of their own accord, are much more likely to hit off a bad scent, than when trotting over the ground at the heels of their huntsman's horse.

When harriers are on a very indifferent scent in chase, their huntsman should keep behind them, and look on with attention, and patiently. But I do not mean to say they should not be occasionally lifted to a point, it being first clearly ascertained that the fault is not a-head. In fact, a huntsman to harriers should be guided in his cast, by observing what ground his hounds have crossed and tried a-head; and if, when at fault on a high road, or foot-path, he perceives that some of his hounds have run on to the right of the path, without owning the scent, he may safely conclude his hare is gone to the left. When a hare has broken her country as the term is, and run out of her knowledge of it, she gene-

rally runs down wind; if up wind, her days are commonly numbered. Some hare-hunters, when making a cast, try that part of the ground where they can most conveniently ride, instead of that which it is most probable the game is gone. Others ride on, hallooing, without regarding their hounds whilst they are making their own cast; their own noise, in that case, prevents them hearing their hounds when they speak to a scent, and they often take it up without their knowing it, and so occasion them to be flung out in the chase, if the scent is very good and the pace severe.

In drawing for a hare, much caution is required in a huntsman, who wishes to have his pack well spoken of by sportsmen. There are, in most kennels, some hounds that will at times hunt riot, such as rabbits cur-dogs, and vermin; and also touch upon wing, especially after a long rest. A hound therefore that speaks to a scent in drawing, should not be encouraged till his huntsman is sure he is on his lawful game. It greatly disappoints hounds, as well as tends to make them wild, when they fly to cry, and find it is upon riot, to say nothing of the necessity of rating them for a fault not their own.

(To be concluded in our next.)

## SONNETS FOR COCKNEYS.

NO. I.—THE EXCURSION.

Oh! don't I like to get into the park,  
And watch my Cuba in the evening air  
Send forth its vapours from the glowing spark—  
Whilst after to the Heagle I repair  
With Susan Smith, who lives across the way.  
Oh! aint it prime to walk about the grounds,  
And talk of love and Byron whilst we stray,  
And Venice with its very wondrous rounds  
Of life, and light, and music, which abounds—  
'Least as I'm told, for I was never there—  
In every street and alley, lane and square,  
Until the very natives it astounds.  
Whilst Susan cries with rapturous emphasis,  
"If this aint prime I'd like to know what is?"

NO. II.—THE ASPIRATION.

I stood at night on Hungerford's tall bridge,  
Which spans the river like a maniac's dream  
That's come to pass,—and from the furthest ridge  
Saw far and near the flickering gas lights gleam;  
Whilst all was silent, save the stealthy tread  
Of tall policeman gliding through the gloom,  
To track the vagrant who should make his bed,  
On door steps, sharing with the scraper room.  
I heard the death of midnight, for St. Paul's  
Sent twelve deep tones upon the clammy air,  
And as upon mine ear each iron stroke falls,  
I nearer to the railing did repair,  
And looking over, madly said with glee,  
"Zooks! if I jumped—why what a squash there'd be!"

HUNTING IN WARWICKSHIRE.—The character of Warwickshire as a hunting country, even in its most brilliant days, was never known to stand higher than about a third-rate rough woodland district, with the exception of about three or four places of meeting which might have some pretensions to the claim of open country. Still there have been some extraordinary runs in Warwickshire, even in the very heart of its woodlands: for instance, I have known a fox found at Birchley Hayes, which is a large wood lying between Menden and Birmingham, to be killed at Rytton Wood, a good fourteen miles as the crow flies, to reach which he would have to pass, as in that instance he did, through eleven large woods, the last, in which he was killed, being nearly two hundred acres. I have also repeatedly known the foxes, which in the Princethorpe and Wapenbury Woods are proverbially stout, go right away into the Pytchley country before they were killed. And many years ago Lord Middleton ran twice in one week from Snitterfield Beakes, which is a large woodland on the Stratford-on-Avon side, to Hewell Park, Lord Plymouth's place, a distance of about fifteen miles, killing his fox the second time, which was without doubt the same by which the hounds were defeated in the first run. Yet with the more than probability that such first-rate runs as I have described will occasionally in the course of the season be experienced, and some good days' sport of a minor stamp more frequently, how is it that "the dons" do not take up their abode in Warwickshire, but invariably congregate in the neighbouring counties of Leicester, Rutland, and Northampton? Why, the reason is, that in a rough plough-country, everlastingly beset with woods in every direction, and where the land is of a nature not to afford good hekking scents, which with the best part of the country is well known to be the case as compared with the flying countries which I have just mentioned, there is no certainty of getting even short bursts, to say nothing of long runs, which almost invariably take place in the other countries with the finding of every fox, unless the weather or the Fates are exceedingly unpropitious.—*Sporting Magazine.*

# ADVERTISEMENTS.

**EVERY MAN HIS OWN HARNESS MAKER.**  
**THE DURHAM DUCIE HUNTING AND**  
 Travelling Knife.—J. B. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of noblemen, sportsmen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.  
 By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.  
 " Windsor Castle, Oct. 4, 1845.  
 " Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

**T. PARISH'S SWEEPS NOW OPEN.**  
 White Horse, Farn-street, Aldersgate-street, City.  
 Sub. 1st. 2nd. 3rd. Start.

 All the money divided and paid (less 5 per cent.) as the Judge places, without reference to any subsequent dispute as to age, pedigree, or other disqualification. Post Office Orders payable at Charing Cross, will meet with attention. Sweeps open for the Chester Cup, 20s. 10s. and 5s.

THE MOST POPULAR WORK OF THE DAY.  
 On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence  
**VOLUME I. of**  
**THE MYSTERIES OF LONDON,**  
 By **George W. M. Reynolds,**  
 Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.  
 "This magnificent volume contains 424 royal octavo pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies."  
 London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

Now ready, the First Number of the new and popular Historical Romance of  
**MARGARET OF NAVARRE;**  
 OR,  
**THE MASSACRE OF ST. BARTHOLOMEW'S EVE;**  
 BY M. ALEXANDER DUMAS.  
 This Work is published uniform in size and price with "Marie Antoinette" (Penny Numbers and Fourpenny Parts), and with the number is presented a beautiful engraving of  
**THE MASSACRE OF THE HUGUENOTS ON ST. BARTHOLOMEW'S EVE.**  
 With the Second Number, a splendid Vignette on steel gratis.  
 "Other works by the same celebrated Author are preparing for the press, and will be speedily announced."  
 London: G. Pierce, 310, Strand.

ONE PENNY EACH.  
**AN AMUSING CURIOSITY!!!**  
 For Maids and Bachelors during Courtship, and for  
 Husbands and Wives after Matrimony.

**THE ROYAL LOVE LETTERS**  
 Or New Art of  
 'Secret Letter Writing!  
 Translated from the Originals deposited in the Library of the British Museum; and according to the form of those written by the Queen and Prince Albert, in answer to each other at the time of courting.  
 WITH DIRECTIONS FOR BOTH SEXES,  
 Showing how they can hold their sweet correspondence, and write their own letters even in the presence of Strangers, either on Love matters, Business, or Family affairs;  
 WITHOUT THE FEAR OF THEIR SECRETS BEING DISCOVERED. Also to enable Ladies and Gentlemen to amuse each other by placing them in a certain way before a Looking Glass; besides to practise other jokes, which can be made pleasing or teasing to both, Old and Young, the Married and Single; without causing a blush on the face of innocence.

**VICTORIA'S LETTERS FOR MALES**  
 AND  
**ALBERT'S FOR FEMALES.**  
 NOTICE!—To prevent the Public being imposed upon by the sale of spurious copies, none are genuine not having the words "Entered at Stationers' Hall," on the outside; and the name of E. Hancock, Publisher, 85, Leather Lane, Holborn.

**NEW WORK JUST OUT.**  
 THIS day is Published, Price One Penny, the  
 First Number of PUNCHINELLO, a Journal of Wit, Wisdom, and Romance, containing PUNCHINELLO'S address to the Public; Should Sir R. Peel have a Statue; Modern Philosophy; a Popular Romance; and a variety of Tales, Anecdotes, &c.

**NOW PUBLISHING,**

 Sweeps for the Handicap Steeple Chase (advertised to be run for 18th December) will be drawn to-morrow night, Monday, Wednesday, and Friday next, subscription 5s, 10s, and 20s. The same degree of attention, honour and punctuality which characterised the management of these fashionable speculations for the last 15 years at this establishment, will be observed as regards the subscribers' interest.—Post Office orders payable to Mr. Abraham Watson, Artichoke Tavern, Lower Marsh, Lambeth.  
 JAMES MANN, Secretary.

**BILE! BILE! BILE! — WORBOY'S**  
**VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, satiating of the stomach, flatulency, habitual costiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½s., and 2s. 9d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.  
 N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

**NO MEDICINE for the CURE of ASTHMA**  
 and Consumption, Coughs, &c., was ever attended by speedily and unflinching success as **DR. LOCOCK'S PULMONIC WAFERS.** In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.  
 Another surprising cure of Asthma.  
 The Declaration of W. Wright, Coachman to A. Spottiswood, Esq., Hockley, near Dorking.  
 January 19, 1845.

My wife laboured under an asthma for upwards of four years; she had the best advice to be procured, but without receiving the least benefit, but, on the contrary, she continued to get worse; her suffering from her breathing and cough was dreadful, and I never expected she could possibly recover. The first week she commenced taking Locock's Wafers she found more relief than from anything she had ever tried before; and she is now, I am happy to say, in the midst of winter as free from cough or ailment as ever she was in her life—in fact, she is perfectly cured.  
 I shall be happy to reply to any inquiries on the subject.  
 DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.  
 TO SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.  
 Price 1s. 1½d., 2s. 9d., and 11s. per box; or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

**CAUTION.**—To protect the public from spurious imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words **DR. LOCOCK'S WAFERS** in white letters on a red ground.  
 If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.  
 Just Published, price 2s. 6d. Free by Post (in a sealed envelope) 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**  
 on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 10, BERNERS STREET, OXFORD STREET.  
 Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Parkins, Compton street, Soho, and all Booksellers.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s., are saved. The Five-pence cases may be had as usual.

Just Published, the **SIXTEENTH EDITION**, illustrated with cases and "Full-length Engravings, price 3s. 6d. in a Sealed Envelope, and sent Free to any part of the Kingdom on the receipt of a Post Office order for 3s. 6d.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter), £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 10, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure. Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

**LONDON.**—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIFPLE. — Thursday, Nov. 27th, 1845.

No. 32. FOR THE WEEK ENDING DECEMBER 27, 1845. THREE HALF-PENCE.

[Stamped to send free by Post, Three-pence.]

## METHOD OF TAKING WILD-FOWL IN THE LINCOLNSHIRE FENS.

**T**HE mode of Wild-fowl taking by means of the decoy, which forms the subject of the present paper and its accompanying engraving, readers an apology superfluous for the omission of the *TEAL* and *MALLARD*, which stand next in our series of British Birds. In order to render the construction of the decoy more intelligible to such of our readers as have only made acquaintance with the wild duck in his *roasted state*, (a circumstance by no means uncommon in the more highly drained and cultivated counties,) we have given a back as well as a front view of the contrivance; the artist has also introduced a man in act of drawing ducks from the hoopnet; operations and views, which it may be proper to observe, are not to be met with or seen at the same time.

There are few objects of sporting attraction so replete with pleasing varieties, and so abounding with characteristics of extraordinary instinct, as the whole of the operations affecting this ingenious occupation. The wild scenery, the secluded situation required, the proximity of the sea or extensive range of waters, the liabilities of the seasons, the difficulties of access, and the distances from the residences of the neighbourhood, are all subjects of strong interest, and never fail to excite in the mind of an ardent lover of nature an enthusiastic feeling. It is fortunate when a situation is found where nature has supplied the growth of willows and underwood of any sort; otherwise you are obliged to plant around the piece of water selected for the purpose of a decoy, which is mostly of an acre or two, to give a general effect of shelter.

In the lake or swampy plash to which the wild ducks resort, their most favourite haunts are observed. Then in the most sequestered part of this haunt a tapering ditch is cut, which is about four yards across at

the entrance, and decreases gradually in width from the entrance to the farther end, which is not more than two feet wide. The ditch is of a circular form, but does not bend much for the first ten yards. The banks of the lake on each side of this ditch (or "pipe," as it is called) are kept clear from reeds, coarse herbage, &c., in order that the fowl may get on them to sit and dress themselves. Along the ditch, poles are driven into the ground, close to its edge, on each side, and the tops are bent over across the ditch and tied together. These poles, thus bent, form at the entrance of the ditch or pipe an arch, the top of which is ten feet distant from the surface of the water. This arch is made to decrease in height as the pipe decreases in width, so that the remote end is not more than eighteen inches in height. The poles are placed about six feet from each other, and connected by poles laid lengthwise across the arch and tied together. Over the whole is thrown a net, which is made fast to a reed-fence at the entrance and nine or ten yards up the ditch, and afterwards strongly pegged to the ground. At the end of the pipe farthest from the entrance is fixed a "tunnel-net," as it is called, about four yards in length, of a round form, and kept open by a number of hoops, about eighteen inches in diameter, placed at a small distance from each other to keep it distended.

Supposing the circular bend of the pipe to be to the right when one stands with his back to the lake, then on the left-hand side a number of reed-fences are constructed, called "shootings," for the purpose of screening the "decoy-man" from observation, and in such a manner, that the fowl in the decoy may not be alarmed while he is driving those that are in the pipe. These "shootings," which are ten in number, are about four yards in length, and about six feet high. From the end of the last shooting a person cannot see the lake, owing to the bend of the

pipes, and there is then no further occasion for shelter. Were it not for these shootings, the fowl that remain about the mouth of the pipe would be alarmed if the person driving the fowl already under the net should be exposed, and would become so shy as entirely to forsake the place.

The first thing that the decoy-man does when he approaches the pipe is to take a piece of lighted turf, or peat, and hold it near his mouth, to prevent the birds from smelling him. He is attended by a dog, trained for the purpose of rendering him assistance. He walks very silently about half-way up the shootings, where a small piece of wood is thrust through the reed-fence, which makes an aperture just large enough to enable to see if any fowl are in; if not, he walks forward to see if any are about the entrance of the pipe. If there are, he stops and makes a motion to his dog, and gives him a piece of cheese, or something else, to eat; and, having received this, the animal goes directly to a hole through the reed-fence, and the birds immediately fly off the bank into the water. The dog returns along the bank between the reed-fences, and comes out to his master at another hole. The man then gives him something to reward and encourage him, and the animal repeats his round until the birds are attracted by his motions, and follow him into the mouth of the pipe. This operation is called "working" them. The man now retreats farther back, working the dog at different holes until the ducks are sufficiently under the net. He then commands his dog to lie down behind the fence, and going himself forward to the end of the pipe next the lake, he takes off his hat and gives it a wave between the shootings. All the birds that are under the net can then see him; but none that are in the lake can. The former fly forward, and the man then runs to the next shooting and waves his hat, and so on, driving them along until they come to the tunnel-net, into which they creep. When they are all in, the man gives the net a twist, so as to prevent them from getting back. He then takes the net off from the end of the pipe, and taking out, one by one, the ducks that are in it, dislocates their necks. This is the scene represented on the left hand of the engraving.

The net is afterwards hung on again for the repetition of the process; and in this manner five or six dozen have sometimes been taken at one drift. When the wind blows directly in or out of the pipes, the fowl seldom work well, especially when it blows into the pipe. The reason of this is, that the ducks always prefer swimming against the wind, otherwise the wind blowing from behind catches and ruffles their feathers. If many pipes are made in the same lake, they are so constructed as to suit different winds, and are worked accordingly. The better to entice the fowl into the pipe, hemp-seed is occasionally strewn on the water. The season allowed by Act of Parliament for taking ducks in this way is from the latter end of October until February.

Willoughby states that formerly before the young ducks took flight, or while the old ones were in moult and unable to fly, they were driven by men in boats furnished with long poles, with which they splashed the water, between long nets stretched vertically across the pools in the shape of two sides of a triangle, into lesser nets placed at the point, and in this way he says that four thousand were taken at one drive in Deeping Fen; and Latham has recorded an instance in which two thousand six hundred and forty-six were taken in two days near Spalding, in Lincolnshire; but these practices being considered injurious, were prohibited by statute in the reign of George II.

The decoy birds are wild ducks, bred on the spot, which become domesticated by the most constant and regular supply of food, and are kept within a moderate number by killing them off when the season is over. At the commencement of winter these birds begin, by an unaccountable instinct, to take their wheels of flight, leaving home at the reflux of the tide, and returning about high water, rarely unaccompanied with a numerous flock of new acquaintance. These excursions are closely watched by the keeper both night and day, always being prepared to greet the return with plenty of corn. This keeps all quiet till daylight (if a night flight), when his delicate work commences, but seldom successfully without a brisk wind. When the pipe is fixed up to work at, a small quantity of oats or hemp-seed is thrown at the mouth, which, accompanied with a pleasing whistle, induce the old birds to rush forward, and if a good number of foreigners should follow, he by degrees supplies the food more within, till the body has reached beyond the turn to exclude them from the pond. At that critical moment he runs to the front, and showing himself, with a shout, the birds fly to the end, where, cooped up in a very small space, a most ludicrous scramble and squalling take place. A helper, being ready, has then only to take them by the neck, and, being expertly educated in Jack Ketch work, twists away till even hundreds are thrown into a pit-hole purposely prepared.

It scarcely ever occurs that the old birds are to be thus entrapped. Being familiar at business, they take good care to keep in the rear; or, if impelled by numbers and eagerness far into the pipe, they then dive, beating a safe retreat in that way.

The great pride of a decoy-man is not only to possess an expert helper but an assistant of another description—a dog—which through the whole of the movements is no mean performer. He is accustomed to wait upon his master at all times, who, by teaching him playful ways, brings him as it were to amuse the decoys. They not only become used to his gambols, but delight in them, and will dash after his tricks whenever they are exhibited. We are told, in print of authority, these animals are made use

of to rouse the lethargic and sleepy habit of the strangers, and that they fly to the dog to scare him away from disturbing their quiet repose; but to us this is not evident, firmly believing it to be the daily practice with the domestics that works the magic with the new comers. These observations are genuine, and drawn from the books of experience. When the work begins, a signal is given to little Venus, or Daphne, or Mar-cury, and she or he flies to the call, skips around the skreens, jumping and shaking the tail, and pricking the ears—the eyes sparkling with pleasure, and bursting with ardour to give salute with the tongue; but no babbling: it is all forbearance, though full of fire; and it is only by frolicsome freaks the whole pond is attracted, exciting a general rush to get at the dog. This is one of the principal means of having a well peopled pipe. The breed is peculiar to itself, and perfectly nondescript: in appearance the veriest of curs, but in sagacity a spaniel—small, of great vivacity, the active energies are surprising, and the animation with which the part is acted is an extraordinary as it is amusing.

The wonderful power in the fowl, of nasal discrimination, renders the schemes of the enemies delicately dangerous, and it is only by the aid of lighted peat in your mouth, used as a cigar, that you can wipe away the stigma of animal odour. Without this safeguard you cannot approach within a quarter of a mile.

To enumerate or describe the different beauties rewarding the anxious task, is not easy; but it embraces in few words the whole of the duck kind. Yet there is an exception, though of the same family, of singular curiosity—the dun-bird—which, although in general companionship, is rarely to be taken in this manner. He is certainly the sultan of flavour, and may be hailed as the first in the rank. This may render his sagacity or instinct more refined perhaps; but, be it as it may, different traps become necessary to secure him. On the side of the rivers at the evening dusk, a high net is erected on poles, in the neighbourhood of the decoys, when in the flights of these high-minded creatures they get entangled.

At the first blush of this account, it is natural to conclude that a decoy is good for gold as well as for ducks; but there are many contingencies in waiting, and many's the time and oft, that, with plenty saluting your eyes and ears, disappointments arise, leaving the carriers empty, and lords of the market to despair. First, you must have cold weather without frost: then you must have the wind at east, and with a breeze: then you must have birds with good humour, and inclined to vary their taste with new friends: and, last of all, you must have skill, luck, and a great flight; and even with these happy combinations, neither oats, dog, peat, nor winds will do. I have seen the whole congregation floating in the centre in close column, casting their heads to the air, as it were watching the clouds with one eye, and laughing at you with the other. A little farther, strange, though true, I have known some years successful to overflow, and others barren to hopes—having the same quantity, the same weather and the same experience.

In 1735, the Tillingham decoy in Essex netted, after every expense, upwards of eight hundred pounds; and in 1739, ten thousand head of widgeon, teal, and wild-ducks were caught in a decoy of the Rev. Bate Dudley, in the same county.

The general season for catching is from the end of October to February. By the 9th Ann. ch. 25, and 10 Geo. II. ch. 22, to take or drive away any wild-duck, teal, widgeon, or other water-fowl in the moulting-season, between the 1st of June and the 1st of October, is punishable with a fine of five shillings, to be levied by distress; in default to be imprisoned, whipped, and kept to hard labour. The right in the property of decoys was settled in the Court of King's Bench in November term, 1810, when it was determined that disturbing a decoy by firing a gun in the neighbourhood, to frighten away the wild-fowl which had been decoyed by the tame birds, constituted a trespass.

Decoys are usually let at a certain annual rent; but improvements in draining are gradually exterminating these ancient distinctions of the fenny districts. Thirty thousand francs have been paid for the produce of Lake St. Lambert, near Paris, for one season.

Thus far the DECOY system. Anon we will dilate on coast GUNNING and PUNTING.

**THE SECRET OF WARM FEET.**—Many of the colds which people are said to catch commence at the feet. To keep those extremities constantly warm, therefore, is to effect an insurance against the almost interminable list of disorders which spring out of a slight cold. Firstly, never be tightly shod. Boots or shoes when they fit closely, press against the sole of the foot, and prevent the free circulation of the blood. When, on the contrary, they do not embrace the feet too tightly, the blood gets fair play, and the spaces left between the leather and the stocking are filled with a comfortable supply of warm air. The second rule is—Never sit in damp shoes. It is often imagined, that unless they be positively wet, it is not necessary to change them while the feet are at rest. This is a fallacy; for when the least dampness is absorbed into the sole, it is attracted further to the foot itself by its own heat, and thus perspiration is dangerously checked. Any person may prove this by trying the experiment of neglecting the rule, and his feet will feel cold and damp after a few minutes; although on taking off the shoe and examining it, it will appear to be quite dry.

## COURSING AND THE GREYHOUND.

SECTION II.—(continued from page 480.)  
MODERN COURSING—CELEBRATED GREYHOUNDS.

**S**NOWBALL, Major, his brother, and Sylvia, were perhaps the three best and most perfect greyhounds ever produced at one litter. They never were beaten.

The shape, make, systematic uniformity, and all the characteristics of high blood, were distinguishable in the three; the colours of Major and Sylvia were singularly brindled, that of Snowball a jet black, and when in good running condition was as fine as black satin. Snowball won ten large pieces of silver plate, and upwards of forty matches, having accepted every challenge, from whatever dogs of different countries were brought against him. His descendants have been equally successful; Venus, a brindled bitch; Blacksmith, who died from extreme exertion in running up a steep hill; and young Snowball, beat every dog that was ever brought against them.

For several years Snowball covered at three guineas, and the farmers in that and the neighbouring districts sold crosses from his breed at ten and fifteen guineas each. Major, his brother, displayed his powers before the gentlemen of the south as already described; this, as a public exhibition of the dog to a few sporting amateurs, might be bearable; but could he have found a tongue, when he beheld himself brought to run a hare out of a box, in the month of March, upon Epsom Downs, amidst whiskies, buggies, and gingerbread carts, well might he have exclaimed,

"To this complexion am I come at last!"

On the superior breed of greyhounds there has been a variety of opinions; the blood of the late Lord Orford's was allowed to stand very high, if not the first, in the public estimation. Perhaps there has not been any person who took more pains to arrive at the utmost state of perfection in his object; and it is a circumstance generally reported that he even had recourse to a cross with the English bull-dog, in order to acquire a courage and resolution till then unknown. After seven descents, it is said, he obtained the object for which he had been so solicitous, without any diminution of speed, or the beauties of shape and symmetry. Lord Rivers's stock is now admitted to be one of the first in England, and its superiority may be owing to a judicious cross of the Dorsetshire and Newmarket blood. Mr. Gurney, of Norwich, was likewise for some years in possession of a breed in considerable repute. It has the three great requisites, blood, bone, and shape. Snowdrop, a son of Snowball, won the Malton Cup four successive years; and Fly, a grand-daughter of Snowball, a yellow and white bitch, the property of Major Topham, carried it away also in the Malton Spring Meeting of 1810, though she had suffered previously very severe exercise. Scarcely a greyhound, indeed, of other blood appears at the Malton meeting, and it has been so celebrated as to be introduced in almost every county in the kingdom.

There was a circumstance respecting Snowball, peculiar to him in the history of coursing. He served greyhounds for years before his death at three guineas each. And amongst them two out of Wales, two out of Scotland, one from Marquis Townshend, out of Norfolk, and the rest out of counties at some distance. Fifty guineas were given for Young Snowball, who was sold afterwards for one hundred; and Mr. Mellish beat all Newmarket with another son of Snowball.

Thus much of celebrated greyhounds. I know that admirers of by-gone days will tell us that we have neither a SNOWBALL or a SNOWDROP, and thence take occasion to argue that those animals were unmatched, and that our greyhounds lack endurance and strength, although they cannot deny them the praise of swiftness. These admirers of "auld lang syne," forget that the objects of their admiration are *phenomena*, exceptions to canine rules; and that as every generation of horses does not produce an ECLIPSE, nor every race of mankind a PHILIP, a CÆSAR, or an ALEXANDER, their depreciation of present greyhounds is not worth a rush. The question is, has the general form, speed and breed of the animal improved? to this we answer YES.

## SECTION III.

THE QUALITIES AND FORMATION OF THE GREYHOUND.

The Coursing Clubs and Societies formed in various parts of the kingdom for the diversion of coursing, are probably greater inducements towards improving the breed of this animal than any other; for without your dog has an appearance of blood, he there ranks no higher than a cur, even though his qualifications may be somewhat superior, and blood, beauty, bottom, and speed must all concentrate to carry the day. An anxiety for superiority forsakes us not in trifling matters, and whatever tends to the increase of individual renown, gives an additional spur to our exertions. Happily, through the medium of some friendly assistant, the honours we gain in the field are seldom suffered to die upon the spot, but are speedily announced in the Sporting newspapers of the day with all the pomp of hard-earned victory. It is this I am firmly persuaded, which induces many men to assume a character they do not possess, and to claim too close a connection with the more worthy descendants of the mighty Orion.

Every county has a quality peculiar to itself, and on which it founds a claim to precedence; but amongst those which pretend to sporting celebrity, Yorkshire occupies the foremost rank. Its climate and situation; its extent and

numerous population, added to the independent spirit of its inhabitants, and their natural propensity to sport, all combine to raise it above its competitors, and to decide the challenge which their vanity may assume. It must not however be denied, that Norfolk, Suffolk, Lincolnshire, Cambridgeshire, Wiltshire, Hampshire, and Derbyshire are each famous for their greyhounds, and the best crosses have occasionally been had from thence; but when I give the character to Yorkshire I have done, I wish it to be understood as combining in itself more general resources for a sportsman than any other country; for, except black-game, every object of his pursuit is there to be found, not in plenty only but perfection. The superiority of the greyhound of one county over that of another, and frequently an adjoining one, has at all times given rise to much controversy and speculation; but, in my opinion, so much depends upon the animal which is to determine this point, and the different methods of training and exercise, that we are too prone to regulate by theory, what can only be substantiated by long and skilful practice. We are so well aware of the different effects of air, food, and water upon the constitution of the horse, that I am somewhat astonished we so rarely anticipate a similar result in that of the dog; sudden changes of either will overturn the best of systems previously adopted, which can only be again restored by an equal and uninterrupted process. The advantage, therefore, which a dog possesses of running upon his own ground; or, in other words, fighting upon his own dunghill, is so physically obvious as to require no further proof than daily experience; one trial will be sufficient to convince the most cynical declaimer; and though there are those who constantly arraign the practice, it nevertheless seldom conduces either to their profit or reputation.

Notwithstanding, however, the difference of opinion upon these points, it has seldom happened that any existed in regard to the shape of the greyhound, and the old and favourite expression of

Headed like the SNAKE,  
And neck'd like the DRAGON,  
Sided like the ARAB,  
Backed like a BEAM,  
Tailed like the RAT,  
And footed like the CAT,

has been generally considered decisive of excellence. Favourable as such an opinion appears to be, and supported by the authority of time and experience, it will perhaps appear a bold attempt in the writer to refuse unqualified approbation to what most men admit to be self-evident.

It is generally allowed, that the speed of all animals depends much more upon the symmetrical formation of their various parts, than any innate quality, and so long as these proportions are uniform and the muscular powers full and expanded, the greater will be the velocity of their motion when roused into action. Under these circumstances it is requisite that some one part should be so formed as to increase by its elasticity the action of the others: for this purpose the horse is gifted with a pastern, which according to its length and size adds very materially to his speed and stoutness. Now, it must be obvious, that as the hare can strike nearly as far at a stroke as the greyhound, it is in a great measure owing to the length of her toes, which supply the place of a pastern: and if this hold good in respect to one animal, it surely must towards all, so that a round foot from being really an advantage, in a greyhound, is decidedly reverse. In a pointer, I acknowledge this to be a great perfection, but he is perhaps the only dog which in this particular we should be so anxious about: indeed, many men carry the idea to an extravagant height, and the remark of an eminent artist, when I once made an observation upon the shape of a greyhound he was painting, "that, if he had followed the directions of his owner, he would have had no feet at all," struck me as conveying a tolerably correct idea of this generally received but erroneous maxim. The description before-named, is in other respects properly correct, and by attending to its directions, so far as appearances go at least, we shall not very seriously commit ourselves.

(To be continued.)

**SPORT IN WARWICKSHIRE.**—The shooting which Warwickshire offers to the sportsman is of that ordinary character that requires no especial notice here, with the exception that the black cock is to be met with in small quantities in Sutton Park, which is on the borders to Staffordshire, and which nominally, but not effectually, preserved by the Corporation of Sutton Coldfield, or the game would be far more abundant than it is, from the benefit of being contiguous to the well preserved property of the Marquis of Anglesey at Beaudesert, where the black cock may be seen in great abundance. This is the more extraordinary, as it is the only spot in the midland counties where the same description of bird is to be found. There is no great abundance of wild fowl in Warwickshire; in fact, the land is too well drained and cultivated to afford food for snipes in any abundance, although they are found scattered at intervals through many parts of the country; but the wild duck is constantly met with in couples by the sportsmen during the winter season; in fact, they breed in the rivers and brooks which intersect most advantageously this well-watered agricultural district, and numbers are wantonly murdered in the months of July and August by the shooting farmers before they can well fly, and are from that circumstance called flappers. One of the largest decoys in England is still kept up at Packington Park, Lord Aylesford's place, where ducks are taken during the winter in great numbers, there being a pipe for nearly every wind that blows.—*Sporting Magazine.*

## WRINKLES FOR THE CROOM.—NO. X.

HE "wrinkles" which form the present budget, and those for the next week or two, will be seasonably devoted to a consideration chiefly connected with the casualties of hunting stables: although many of the hints will genuine a more general character.—

## BAD FEEDERS.

Those horses which are of a delicate constitution, and require several days to bring them back to their regular appetites, after every day of unusual exertion, especially that caused by following hounds, are commonly known by the name of "bad feeders." It is a defect which, unfortunately for those who have small studs, is by no means uncommon; but at the same time they have this consolation that the remedy, to a very considerable extent, lies in their own hands. There are many degrees of this weakness of constitution—some only declining their feed after unusually hard days; with others the mere excitement consequent upon having been with hounds is sufficient to prevent their feeding that night, while with others it depends on the length or fatigue of the day. Some will cease to be affected as they become more used to the business, or improve in their condition, and of course no farther trouble need be taken with them; but with others nothing ever appears to produce any permanent benefit. Some one may say "Give them a cordial ball." I admit that by this means a temporary appetite may, in most instances, be obtained; but if persisted in, the stimulus, to be of any service, must continually be increasing; besides which we cannot always be giving cordial balls. I have invariably found it to be the best plan to keep such horses excessively quiet, being more than usually particular that they shall be out of hearing of any dogs, which commonly, for obvious reasons, disturb them more than any other noise; at the same time, their groom can easily perceive what part of their food they are most partial to, and, by paying attention to this, they may be induced to eat more than they otherwise would have done. I have not unfrequently known instances of their refusing the oats, and picking out the beans. The plan here is at once obvious: increase the quantity of the favoured grain, and diminish that of the rejected; and by having the beans well split or bruised, they mix better, and make it more difficult for them to be separated from the oats. Some horses are passionately fond of white peas, and when this is the case, it will be found of great assistance, as, from their size, they mix easily with the oats, and by so doing may frequently be made the means of carrying down a good feed. These animals should always be fed in small quantities at a time, and what they leave in their mangers must be taken out, so as not to cause disgust. I have met with instances where they would eat with avidity directly their corn was wetted, though they would not touch it in a dry state. It frequently happens that although they may refuse every thing which is put before them by day, they will dispose of a good portion by night. When this is the case, by keeping the stable dark during the day they may be cheated into a pretty regular appetite. With a small stud, however, I should recommend those horses, which are either known to possess this defect, or whose forms indicate a delicacy of constitution, to be avoided. They must be very brilliant hunters indeed to make amends for the number of times they will be unable to come out in their turns during the hunting season.

## BANGS AND BLOWS.

These, from the nature of the work, must always be of common occurrence with hunters, especially with those ridden in strong countries. Some horses, however, are so clever as rarely to meet with anything serious in this way, whilst others are equally unfortunate. Of course, frequent and long-continued fomentations must be had recourse to, in the first instance, as they will best tend to reduce inflammation, which is certain to be found more or less about the part. Should they prove bad, rest for a considerable time will be necessary, and as soon as the inflammation has in some degree subsided, strong chalk and water will, I believe, prove the best remedy. Should this, or with the addition of a little vinegar not prove sufficient, recourse to a veterinary surgeon will, nine times out of ten, be the shortest plan, as the injury has probably extended to some of the sinews, which anatomical knowledge will be necessary to discover.

## COLD AND COUGH.

This is another ailment to which hunters are, perhaps, oftener subjected than most other descriptions of horses, as they are always liable to be kept standing in exposed situations, after having been heated with exercise; indeed, fatal effects have not unfrequently proved the result of chills caught in this manner. I have, however, never suffered any bad effects from their influence in my own stable, nor do I think there is much fear from it, where proper care is taken. I attribute my good fortune, in this respect, in a great measure, to two simple causes: first, having always been very particular not to suffer my horses to stand still after a burst with hounds; and, secondly, having invariably paid attention to the earliest symptoms, so as to prevent bad consequences. I have always borne in mind the speech of some eminent physician, who, upon being told by any of his patients that they

had only a cold, asked them if they would wish to have the plague. It should be remembered that, with horses in high condition, inflammation is always at hand. I have never found the common remedy of one or two bran mashes, given at night instead of the last feed, and as hot as the horse will take them, with the addition of one ounce of nitre in each, fail, when given upon the very first symptoms showing themselves; and when the stable is not a warm one an extrarug will be advantageously employed at night. Nitre, however, should always be given with rather a sparing hand on account of its strong diuretic properties; and by placing the bucket containing the mash on the ground instead of in the manger, a considerable discharge from the nose may frequently be obtained, from which relief will be experienced. When permitted to go beyond the first stage, of course more vigorous measures will be needed, such as bleeding and lower diet. It should never be forgotten that neglected colds not unfrequently degenerate into chronic cough which is one of those diseases for which no cure has yet been discovered, but at the same time is one which admits of so much palliation, as to prevent its coming much, if indeed at all, against a horse in his work. Horses of this description will derive the greatest benefit from being precluded the use of the long hay. Indeed, so much does this operate upon them as, in some instances, to be no less than the difference between the presence or absence of the cough. The only method with which I am acquainted of successfully combating this disease, is to pay more than common attention to the state of the bowels, to keep the horse in strong work, nor should he be suffered to be quite so full of flesh as if nothing was the matter; give frequent slight sweats, as little water as possible, and have all the hay cut. I had in my stable, a few years since, a most excellent hunter, which I picked up by chance, as he had been labouring for some years under a most violent chronic cough, and had consequently been put to all sorts of rough and hard drudgery, but by a steady perseverance in this mode of treatment, the cough was never heard for the last two months of my possessing him, and never appeared to come against him in the least. How long this state of things might have continued I cannot say, as he died by breaking his neck in a fall. I should add that in the case of this horse, one feed of long hay was always sufficient to cause a temporary return of the cough. As he was in very poor condition when I first became possessed of him, I administered a very considerable quantity of Peruvian bark (an ounce a day in his corn for about a month) from which I experienced the best possible result, and I have always been of opinion that by giving a tone to the constitution, it exercised a beneficial influence over the cough.

## NOTICE!

THE PROPRIETORS, in consequence of the unexpected demand, have found themselves under the necessity of reprinting THE ALMANACK and with it NUMBER 28 of THE MAGAZINE which they will still continue to keep on sale for a few weeks, at the price of THREEPENCE together.

N.B.—This is done in order to keep faith with many Subscribers, who have failed in procuring their numbers owing to the increased demand. The Almanack may also be had, strained on linen, varnished, and with neat roller, for suspending in Parlours, &c. Price 2s. 6d. each.

\*\* The Stamped Edition of the SPORTSMAN'S MAGAZINE, can be had post-free direct from the Office, or through any News agent for 3s. 3d. per quarter, PAID IN ADVANCE. We insert this notice in consequence of numerous enquiries as to the mode of obtaining the Stamped edition. Observe, a single copy can always be had, but it must be ordered on the Tuesday at latest to make sure of supply, as we print no stock of stamps.

## CORRESPONDENTS.

- B. L., Durham, must give us a little breathing time. He asks us five questions; and we have put three of them on our list to ask ourselves. Is he aware that chronological questions require references? He cannot be so simple as to suppose that every editor is a walking chronology upon all subjects, important and unimportant; and that we can give date, place, duration, sums of money, minutes, seconds, &c., from memory alone.
- ERPING SAUSAGE.—Freeman died at Wimborster, October, 1845, and was buried by Ben Caunt, who went down to see his long pal settled comfortably in his long home.
- S. REBBINS.—The Almanack given with the 25th number of the SPORTSMAN'S MAGAZINE, contains all the information respecting the forthcoming Derby, Oaks, and Leger, which you seek, and the Calendar of the same contains the very fixture you enquire after. Surely you buy the paper!
- A YORKSHIREMAN.—It is a vulgar error. The Queen does not sign the death warrants of criminals, and B does his wages.
- EASTHAM.—To your first question: We will enquire. 2. Sir C. Hawley's Humdrum is by Sir Hercules, out of Helen.
- R. G. L.—You must have a licence to authorise you to shoot rabbits; but it is not necessary for small birds, not game.

- C. R., Glasgow.**—The man is an impostor if he attempts to identify himself with Brumey (John Leechman) of Bradford; that pugilist died in February of the present year, at Manchester, and was removed to Bradford, where he was buried. Consult *Bell's Life* for February, 1845, and you will find plenty of evidence to unmask the pretender.
- H. R., Leeds.**—In cutting the ace is lowest, and you have the deal.
- NICHOLAS, Brighton.**—A, B, and C were playing at dice. A betted with B that he would throw higher than either B or C; A threw higher than C, and only tied A. Has A won or lost? A contends he has a right to throw again!—A has lost.
- SHAMON.**—At Cribbage A plays a four, B plays a three, A plays a five and scores 5; B plays a two, and scores 4; A plays a six, and scores 6 more; B plays an ace and scores 6; A holds another four and plays it, will the sequence run again on the four, and if so, would it run again on B playing a three?—Yes, in both cases.
- P. H.**—We shall shortly give a complete memoir of Jack Randall, containing all his fights, in the HISTORY OF BOXING; it would, therefore, be occupying space needlessly to repeat them. A summary of the battles of Randall will be found in "Fistiana," by the Editor of *Bell's Life* in London. BOXIANA has been discontinued since 1835, and there is no similar work. Our HISTORY (and we say it without vanity) will be unique.
- BILLIARDS.**—TYRO.—The white ball having been struck first, four can only be scored.—SUBSCRIBER, Briggs.—E can take the choice of balls. In answer to the other question—the balls must be broken, and E play, or D scores and plays on.
- QUERIST, Bath.**—The greatest winner of the year is Lord George Bentinck, who has won fifty-eight races with twenty-five horses, netting a sum of £217,572, besides a cup.
- H. L., Shrewsbury.**—At a card table the winner was to proceed 10s. A threw 43; one of the party bought the number and obtained the prize; is the purchaser to pay the 10s., nothing being said about it to the purchaser at the time it was sold?—The contract between the "putter up" and A was not transferred to the purchaser of the number; therefore, A must pay the 10s.
- A. H. Z.**—If a party playing at whist mark eight and omit to call the honours which they hold, can they score them after the cards are played, the adverse party not having scored any?—Certainly.
- R. B.**—It would be out of season. This is the most stagnant period of the year in Turf Betting. We will in due time give complete series of instructions for "Betting Round," with illustrations of the "DOCTRINE OF CHANCES."
- J. THOMPSON, (Stockton, Yorkshire).**—By paying a quarter's subscription (three shillings) by order, or in stamps, to the publisher, 42, Holywell-street, Strand, you will receive the paper for one quarter, or thirteen weeks, direct to your address.

## OUR WEEKLY CALENDAR.

- SUNDAY, Dec. 21st.**—FOURTH SUNDAY IN ADVENT.—St. Thomas's, the shortest day. **MONDAY, 22nd.**—The youngster with "shining face" now comes home for the glorious Christmas holidays.—Newport Fagrell Fair.—South Lancashire Coursing Meeting (and 23rd).—Remarkable presence of mind. A gentleman being pursued by Mr. Levy, the sheriff's officer, took refuge in a pork-shop.—Prince Albert at the Smithfield Cattle Show gets a prize for his pigs, 1844; and so makes "a purse out of a sow's ear."
- TUESDAY, 23rd.**—Swindon Fair.—Carols and Yule logs. Pipe up my merry "waits!" Holly, ivy and mistletoe in huge demand.—The French took Antwerp, 1832.—Things to be borne in mind.—Now list your doors, cork your soles, and tallow your noses. Now scour your raisins, and whip your syllabubs. Now look up your greengrocers for evening parties. Now kid your knackers, and fannel your bells for boxing-day.
- WEDNESDAY, 24th.**—CHRISTMAS EVE.—Hawarden Fair.—Robin Hood died, 1247.—Great Eruption of Vesuvius, 1801; another *rasa* breaking out of the poor old crater.
- THURSDAY, 25th.**—CHRISTMAS DAY.
- CHRISTMAS AULD LANG SYNE.**  
"And well our Christian sires of old  
Loved when the year its course had roll'd,  
And brought blithe Christmas back again,  
With all its hospitable train.  
On Christmas eve the bells were rung;  
On Christmas eve the mass was sung;  
Forth to the wood did merry men go,  
To gather in the mistletoe.  
Then open'd wide the baron's hall  
To vassal, tenant, serf, and all;  
The huge hall table's oaken face,  
Scrub'd till it shone, the day to grace,  
Bore then upon its massive board  
No mark to part the squire and lord.  
There the huge sirloin reek'd; hard by  
Plum porridge stood, and Christmas pie;  
Nor fall'd old England to produce,  
At such high tide her savoury goose.  
'Twas Christmas broached the mightiest ale;  
'Twas Christmas told the merriest tale;  
A Christmas gambol oft would cheer  
A poor man's heart through half the year."
- SIR WALTER SCOTT.

- FRIDAY, 26th.**—BOXING DAY.—St. Stephen's Day.—This is an awfully insinuating occasion. Human countenances assume a brass-beeching expression, wonderfully disfiguring; hands, like blunderbusses, will be everywhere presented at us; mouths, like open sepulchres, will worm out our last shilling; pockets, like sextons, bury them in their depths, (to wrong the poor simile to death) like an orange passed from lip to lip, we shall be left as dry as the miser's death-bed.
- SATURDAY, 27th.**—St. John's Day.—Billious times: bank-notes, blue-pills, doctor's draughts, and banker's ditto, in great request.

"I'm more for ornament than use," as the wax seal said to Mr. Duncombe's letters, when they were put into the post-office.

**ART BEATS NATURE.**—We've got a painter down east as paints so neatral, that one day he took a piece of shingle and coloured it so much like marble, that when he threw it into the water if it didn't sink there wasn't no snakes in Virginny.

A Cockney geologist says that the letter *w* enters into the composition of woman in all the relations of wife, widow, wirgin and wixen.

## THE KEEPER'S TREE.

## EXAMPLE I.

THE end of our say on THE WILD CAT, (page 480, No. 30) we threatened a something under this title, ancient and concerning the trapping of "varmint," and here it is, or at least a bit of it.

Every one, whether sportsman or not, who has been accustomed to wander through any of the woods or preserves of our island, far away from the noise and smoke of the distant town, must have observed in his rambles, one tree at least in the wood, generally at its outskirts, from the branches of which are suspended the carcasses of several birds and four-footed animals, some whose bones are bleaching in the sun, and others lately killed, whose full plumage and plentiful fur, strongly contrast with the skeletons that swing by their side.

Many would pass by this tree without particular notice, or would merely bestow a casual glance on its branches, but the sportsman and naturalist view it with a far different eye, the one regards the bodies which hang from its branches with a feeling of delight, and rejoices when he reflects that every one is that of an enemy. The other contemplates them with a deep feeling of curiosity, and examines them with an interest unknown to every one but the true naturalist.

Upon examination we perceive almost every species of winged and fourlegged vermin, which frequent our covers and preserves, suspended from the KEEPER'S Tree. The lively colours of the jay here form a rich contrast to the jetty plumage of the carrion crow; and the gay pie-ball of the magpie, the light mottle of the owl, and the blue ashen feathers of the heron—whose life has expiated many a depredation on the fish stew and river—are mingled with the plumage of the buzzard and hawk. The wild cat is suspended side with by side its more domesticated, though no less destructive relation; and the stoat, polecat, and weasel, all of which have fallen by the trap or the gun, prove that the vigilance of the keeper has been well repaid.

In the ensuing papers it is my intention, after treating of the quadrupedal annoyances of the preserve, the henroost, and the warren, to proceed to the winged enemies of the creatures which man would protect for his food, his profit, or his sport.

## 1. THE SELF-HUNTING DOG.

There is scarce any animal more calculated to do mischief to the litters of foxes, to the deer park, or to the game preserve, than this. By night and day he is constantly on foot; weak deer and fawns are an easy prey to him; litters of cubs, if above ground, are worried in a moment, or the old foxes made to remove them from well-placed earths, owing to his scratching at their apouts. The hare and leveret are chopped in the form, or run down; the hen pheasant killed on or made to desert her nest, her unfledged young destroyed; and the covers rendered no longer the resting-place of nature.

The self-hunter at deer or game soon becomes a sheep-killer; and here, as in many other instances, the interests of the farmer are saved in the vigilance necessary to the protection of game.

The Hon. Grandley Berkeley says, "I once knew a self-hunting dog so cunning, that when in a cover full of game, and in the midst of his sport, if he caught wind of the approach of a keeper, he would fly the place. So quick was he in the apprehension of danger, that he used often to vocate a cover, and leave his pursuers at a loss to make out what had become of him. A remarkable and beautiful act of self-devotion I once observed in this animal. He had entered the preserves with a canine companion, the latter evidently unaware of the danger of his employment, and, as usual, the offender was the first to discover the approach of the death-dealing gun. He had often been in similar circumstances, and frequently had his companion destroyed; aware of this fact, the endeavours of the old poacher to make his unwary ally sensible of his peril were suggestions of reason rather than of instinct. He had induced the young dog to follow him from the cover into the meadow, around which ran the park palings, when at this moment, hard in pursuit, the guns appeared, not two hundred yards off. Toby—for that was the name the old dog went by—dashed forward to the well-known meuse in the pales, in the hope that his companion would follow; but finding that such was not the case, at the risk of his own life he returned, ran up and jumped with his paws round the neck of his companion, rolled before him on the ground, and then, pushing him in the ear with his nose, as if telling him there was no time to lose, he dashed through the pales again. All this time the guns were coming up; the young dog evidently was hanging back for the covers and the game; the nearest gun had already begun to slacken the speed of advance, for the purpose of aim, when the old dog returned again, more excited than ever, renewed his solicitations, succeeded in his endeavours, and both the dogs placed the high palings between them and the guns just as the double Manton was brought to a level.

"Once through the park fence, by the time their pursuers gained a place to look over, the dogs were retreating some hundred yards off, in the direction of the village. For years this dog annoyed the preserves, in summer and winter; he knew a trap as well as the man that set it; and

the quantity of game destroyed by him and his companions—for as fast as one was shot, he got another—was incalculable. A ruse at last succeeded; it was as follows: on a Sunday he was found hunting in some hedgerows near the preserves, by two of those interested in the care of the game; they had no guns in their hands; but Toby discovered them, and paused in his diversion, in some mistrust: at that moment a rabbit came by; but instead of the objects of Toby's suspicion interfering to protect it, they threw their sticks at it, and with many cries joined in the chase. It was the thought and act of a moment, but this ruse was successful; Toby was thrown off his guard, and was soon their most active companion. By little and little they approached the preserve; the gate was opened, and all three rushed into the midst of hares and pheasants, and into places that were never before disturbed. Reluctant to destroy so sensible, though so mischievous an animal, they tried to catch him; but in vain: watching, therefore, an opportunity, one of the party retired for his gun; and when he returned with it, he and Toby met within ten yards of each other. At once the dog became aware of his fatal mistake, and with an angry yell of terror endeavoured to retreat, but in vain; the havoc of years was avenged in that unguarded moment."

The trap for self-hunting dogs, cats, martin cats, stoats, polecats, weasels, and even rats, ravens, carrion crows, magpies, and jays, where the preserve is situated not in a fox-hunting country, is as follows:

Lay a dead hare or rabbit, or the skin of either, with a piece of raw flesh, against the butt of a tree, by the side of the ride or path: let the high head of some bare-limbed tree command it, for the sake of the winged vermin: set your steel-trap—of spring sufficient to hold a dog, yet light enough to catch a weasel—about a foot and a half from the bait, so that no long-necked animal can reach the latter without treading on the former; and then fence up with bushes on either side of the bait, reaching from the butt of the tree, and tapering down in height and width to the corner of the jaws of the trap next the spring; so that nothing can approach the bait except by passing over the trap. Cover the trap over neatly, and just sufficiently, with small leaves or short moss, having made a place in the earth enough to let it in even with the surface of things; and then secure the trap with chain and peg, making all appear as natural as possible.

TRAP FOR THE SELF-HUNTING DOG AND OTHER VERMIN.

These traps should remain the year round in the same place, as the older the materials composing the fence are, and the less tainted by the hand of man, the better. In summer, when baits decay so soon, and turn to maggots, they should only be occasionally used; a night now and then with the fresh and reeking paunch of a rabbit, will serve to stop many a marauder, and avoid the danger to the pheasant, which will often approach carrion, in search of the insect that it breeds. Any tree against which to set this trap, is better than the oak, as, in the fall of the acorn, pheasants, of course, would be attracted.

There is another method of catching four-footed as well as the above-mentioned winged species of vermin, and that is by placing three or four traps around a dead deer, hare, or rabbit, in the open part of parks or fields, with a small bush placed in the interstices between the traps, to direct the foot of the vermin. This is a snare which is sure to attract great notice from the winged tribe, and will oftentimes take when the trap against the tree fails. Smaller steel-traps, set in drains, so far in that

nothing but a hole-hunting creature can get caught, are very destructive to the polecat, stoat, weasel, and rat; and artificial drains, of from two to three feet long, placed purposely in hedges or at the foot of banks likely to be frequented by vermin in their passage from cover to cover, or when they hunt the hedgerows, are also excellent devices; indeed the latter of these, made only large enough to admit the polecat, are safe, even in fox-hunting counties. The two first-mentioned traps, that at the foot of the tree, and those in the park or open field, should only be used, where foxes are preserved, at certain hours, and are scarce safe at any time, unless under the immediately inspection of the master.

## 2. THE WILD CAT; OR DOMESTIC CAT GROWN WILD.

The steel-trap as before described, the iron as well as the wooden hutch or box-trap, are good for this species of vermin, as also the deadfall, which, as it is a cheap as well as a most useful trap, and not generally known, it will be necessary here to sketch. It can be made of any old or otherwise useless wood, as well (which it should be in fox-hunting countries) or as large as you please.

No bait is necessary to the deadfall: all animals that this trap is intended to catch are fond of passing through covered places; they tread on the bridge, and the weight of the trap instantly deprives them of life, rendering them quadruped representations of the flattened babe which was asleep in an arm chair, and sat upon by a fat lady, while she read a double number of the "Morning Post." When the fat lady rose from the chair, a maid-servant, shrieking with horror, held up the spoiled child; but holding it edgewise to the astonished eyes of its parents, it was so flattened and fine of edge that they could not see it, and ran for assistance to secure their servant, who, they supposed, had gone mad. In a similar way, a gamekeeper might hold up a polecat, caught in this trap, to his master: but unless he turned its breadth for his inspection, instead of its edge, he would scarce meet with the desired approbation.

A. The Top, or heavy fall of the Trap.

B. The Tilter, or Stick to set it with.

C. The sides of the Trap.

D. Cross-bars or Rester.

E. The Bridge.

F. A small Post, driven firmly into the ground, to prevent the neck of the Bridge

from being drawn out too far. The lower sides of the Trap should be connected by two Cross-bars at either end; the earth being levelled, and hardened is a sufficient bottom.

G. The Hole for the neck of the Bridge.

The weight of the animal treading on the bridge slips it off its catch upon the end of the button, and brings down the deadfall A, supported by the tilter B. Its end just catches in the hole of the upright of the fall of the trap, and acting as a level by its rest on the long cross-bar, and catching the button at the end of the spring, in the notch in the side of the trap, and one of the notches in the neck of the bridge, the weight of the fall is supported till the bridge is displaced, when, the purchase being loosed, down it falls.

(To be continued in our next.)

## GALLERY OF SPORTING CELEBRITIES.—NO. VIII.

THE LATE RIGHT HON. JAMES WALTER GRIMSTON, EARL OF VERULAM.

The recent decease of this respected nobleman, has hastened the appearance of his portrait. Few more liberal men than James Walter Grimston, Earl of Verulam, Viscount Grimston and Baron Verulam, of Gorhambury; Baron Dunboyne, in Ireland; Baron Forrester, in Scotland; and Lord Lieutenant of the county of Herts, remain in the peerage of the realm. Were ours political sketches, we could easily show that he has always had as much "consideration for the rights of the people," as an ancestor so much be-lauded in a late debate. But "ware politics" is ringing in our ears, and we must confine ourselves to his Lordship's character as a sportsman.

Lord Verulam, we believe, was never a fox-hunter, but has always been a preserver of foxes. His career on the turf commenced in 1819, in which year we find Vaharina running in his name. Since then he has possessed the following horses:—Veterinarian, Varennes, br. c. by Orville, Vapour, Sporus, Vaurien, Venom, Vargas, Verbena, Vitellina, (winner of the Goodwood Stakes 1824), brother to Interpreter, f. by Selim, c. by Woful, f. by Phantom, Helas. The Moslem (winner of the Riddlesworth Stakes), Upas, Salix, Brocard, f. by Mr. Lowe, Manille, f. by Godolphin, c. by Orville, Laurestinus, Ombre, f. by Whalebone, Whip, Albert, Vestris, f. by St. Patrick, Basto, c. by Sultan, Little Cassino, f. by Sultan, two fs. by Mameluke, and numerous colts and fillies by Liverpool, and Sir Hercules. Among them the best were Robert de Gorham by Sir Hercules, winner of many cups and plates (now the property of Mr.

M'Kenzie); Charlotte by Liverpool, winner of 110 at Gorhambury, and 135 at Ascot, in 1844, &c., &c.

The following nominations will be vacated, among others, by his lordship's death. Filly by Sir Hercules out of Duvernay, in the 100 sovs. Sweepstakes at the Craven Meeting, 1846, (April 13); in the Oaks; in the Coronation Stakes at Ascot; the Gratwicke Stakes at Goodwood, and the Racing Stakes at same; in a 50 sovs. sweep at Newmarket, 2nd October, &c. Colt by Sir Hercules out of Christina.

Colt by Sir Hercules (1836) by Ishmael out of Corumba, in the Derby, 1846, the Drawing-room Stakes at Goodwood, &c. Br. Filly by Muley Moloch out of Corunna in the 30 sov. Sweepstakes at Newmarket First Spring Meeting, the Nassau Stakes, at Goodwood, &c. Among his lordship's earlier horses Varennes, Vitellina, Brocard, Albert, and Vestris, were winners of several stakes and gold cups: but his Lordship's career on the turf has not, on the whole, been very successful; his name not appearing in the lists as the winner of a Derby, an Oaks, a St. Leger, a 2000 Guineas, or a 1000 Guineas Stake. As a honourable patron of the turf, however, his loss will be regretted, although it was currently rumoured that the delightful race-meetings in Gorhambury Park were to be discontinued.

His lordship's death took place at half-past eleven on Monday morning, the 1st December, at Gorhambury, the family seat of the Verulams in Hertfordshire.

His lordship was born on the 26th of September, 1775, and succeeded his mother's cousin as Baron Forrester, on the 3rd of December; and his father as Viscount Grimston on the 30th of December, 1808. His lordship married, on the 11th of August, 1807, Lady Charlotte Jenkinson, only daughter of Charles, first Earl of Liverpool, by whom he has had issue six sons and four daughters, all of whom, with the exception of one son, who died in his infancy, survive their noble parent. He is succeeded in the title and family estates by his eldest son, Viscount Grimston (now Earl of Verulam), who married on the 12th of September, 1844, Elizabeth Johanna, daughter of Richard Wayland, Esq., of Woodcote, Oxon. A very numerous circle of the aristocracy are placed in mourning by the demise of his lordship. The noble earl's loss will be most severely felt in the neighbourhood of Gorbamby, where his liberality and condescension caused him to be universally beloved.

The noble earl had suffered severely during the last three months from an attack of dropsy, combined with disease of the heart.

### SHOOTING WRINKLES.—NO. III.

Through the various paths of this chequered life it is observable that as man, in his strenuous endeavours to approach perfection, improves upon the management of his ancestors, something transpires to check his progress, and so far to disappoint his expectation. This is observable, in many instances, in the field. Since the invention of the comparatively unerring detonator, various trifling causes have combined to retard the murderous properties which, in skilful hands, that deadly weapon is calculated to wield. In fact, had all things remained in the same state as they were prior to the improvement in fowling-pieces, the various tribes of game would by this time have been nearly annihilated. I am just old enough to remember the common use of the old-fashioned flint and steel, and can perfectly recollect the very different condition of the land upon which game (especially partridges) was then found. You entered a wheat-stubble which was nearly up to your knees, and the bottom was a thick mat of grass and weeds. This afforded good shelter for the birds, and they would, in the early part of the season, lie close, and wait for your approach; your dog having previously found them without being perplexed by their having run perhaps a quarter of a mile. But now it is very different: you find the same number of corn-fields, or rather stubbles, in such an altered garb, that a man who had been absent during the last twenty years would be, in all probability, so much in doubt as to exclaim, "What grain has been growing here!" The stubble is scarcely higher than your shoes; and such has been the advance in agricultural science, that scarcely a weed is to be seen, certainly nothing to present shelter for game; and the moment you enter the field, away flies the covey to some distant spot, or, if not disposed to take wing, they run to the farther extremity, and probably through the next fence. How marvellously, therefore, are your canine attendants puzzled, finding upon the game at the place where it has lodged, and soon discovering by the scent that it has moved; unless very steady indeed, the dogs begin to draw in the direction it has taken; or, if the dog who found them should remain at his point till the approach of his master, not finding anything before him, he makes a cast as if the birds had taken wing; again he gets upon the scent, and is again deceived; and this repeated probably two or three times, the birds are either lost or flushed, without the possibility of obtaining a shot. Turnips, high grass, or potatoes, present the principal shelter, and even the former of these are very different to what they were in days of yore. On most well-conducted farms they are planted on ridges, along which the birds will run at an amazing pace; and thus the shooter and his dogs are baffled in the most perplexing manner.

The natural wildness of the birds is thus increased, and as a matter of course, the more frequently they are disturbed, the wilder they will become: it is therefore of the greatest importance that they should be kept quiet, and the molestations of cur-dogs and similar nuisances most scrupulously guarded against. These circumstances cause birds to be constantly on the watch, and consequently the opportunities of approaching them within range of shot is wonderfully diminished. Whoever attempts to lay down invariable rules where and how game is to be found will, in practice, find themselves egregiously disappointed. Partridges, in particular, are very capricious in their habits; change of weather, the proportion of food, the circumstance of their having been disturbed, and other causes which are not easily accounted for, will often induce them to resort to places and situations in which they are not usually found. This subject does not often engross the attention of the owner of an extensive and well-preserved manor, where he is sure to find plenty of game somewhere or other; but to those whose limits are confined, or the game is not very plentiful, it is an object of some consequence. No one would think of beating a fallow field, or one sown with wheat, in October or November, under an impression that he could obtain a shot; but I have very frequently found coveys in such situations, and, having marked them down where shelter was more propitious, have succeeded in my object. Having tried the most usual places unsuccessfully, it is a recourse perfectly justifiable to run the dogs over other ground; particularly if you are convinced that there are birds in the neighbourhood. One reason

may be assigned for partridges leaving an accustomed situation: it is that they have been so often disturbed from their usual haunts, that they naturally endeavour to seek some place of peace and security.

In the commencement of the season, turnips and potatoes are the most likely places to find them in during the early part of the day; after which they usually seek the corn-stubbles—that is, towards four o'clock in the afternoon. If found basking in such situations, unless you come upon them very suddenly, they will generally run down the ridges; to obviate which in some measure, it is desirable to encourage the dogs to beat across them as much as possible. The middle or side of a corn-field is a very usual place of resort, and is no doubt selected as being most capable of observation, and to enable the birds to watch with greater certainty: these habits are, doubtless, acquired from experience. Nevertheless, they will sometimes be met with in the corners of fields, if such sites present attractive shelter, and are more commonly resorted to in turnip or potato-fields than in corn-stubbles. They may also sometimes be found under the warm shelter of a hedge-row in windy weather, on which occasion they will frequently rise singly; but it requires a very steady, experienced old dog to find them: they will lay so close that they are beaten over, and then rise when you have passed by them. The most certain way to get at them is for an attendant to beat with a stick, when, if there be two guns, by taking each side of the hedge the great probability is that one will obtain a shot. Brambles, fern, and long grass, are not now usually found in the borders of hedge-rows on highly-cultivated farms; but when they are, they present most attractive resorts. Partridges will also shelter themselves in dry ditches, which are covered with briars and other rubbish; they are difficult to find in them, as setters and pointers cannot, in general, make any progress along them; indeed, if they could, they would in general be out of sight: a well-behaved spaniel is the best kind of dog for this purpose, and, if properly broke, is a most serviceable companion.

During the early part of the season, pheasants are commonly found in the open, especially under the shelter of thick hedge-rows, where, upon being found, they will often run a considerable distance, not unfrequently threading the hedge, by which the best dog on earth is sure to be puzzled. All cock pheasants will sometimes take straight across a field, and thus unseen escape; but, when two persons are shooting in company, the most effectual plan is for one to beat up the opposite side of the hedge to the other; the game must then either run the length of the fence or take wing, although they will not on all occasions rise even at the termination of the hedge. I have known them travel from one field to another without any chance of inducing them to present their beautiful plumage to the fowling-piece; in fact, it is their very general practice to run some distance before they will spring, even in covert. As the season advances, they take more constantly to the woods, where the usual method now adopted is that of forming battue-parties, and besiege the game of all descriptions which may be found therein after the manner of an enemy levying devastation on the inhabitants of a fallen city.

Among those objects of the sportsman's attention which have changed less in their habits than any other, are woodcocks and snipes. This is easily explained: they are wilder in nature than pheasants and partridges; their haunts are farther from the habitation of mankind; they seek the woods and marshy spots; are here to-day, and no one knows where to-morrow. They are not in any degree dependent upon man for their sustenance, neither is it possible, that I am aware of, to place food of any kind within their reach; if it were, it might be a means of rendering considerable attraction to certain spots. I apprehend it is in search of their food that they are induced to ramble, and are consequently so uncertain to find. Having arrived at a covert, either not meeting with a supply of food, or the quantity being short and quickly consumed, they find it necessary to depart in search of some more propitious spot. This appears to me to be the most rational way of accounting for their constant wanderings. In beating for woodcocks, a knowledge of the place to which they resort is of great assistance, as they are for the most part found very near the same spot. The vicinity of the wet soaks, or springs, are the most usual; especially during frost, when the ground in other parts is too hard to permit of their obtaining any sustenance. By going directly to those situations, and afterwards beating the covert throughout, should the object of pursuit not be found without much time and labour may be saved. This is, in my opinion, the most interesting and exciting description of shooting which our islands boasts of; especially if it be followed in the correct and legitimate way, with a clever team of well-broke spaniels. They are, however, difficult to meet with, and require much time and labour to bring under proper subjection. If they range too wide, they will flush their game beyond the range of the gun; and, if they are to be perpetually called to, the game will be continually disturbed, and run off before found, as in covert-shooting various other species may be sought for besides woodcocks: indeed, it is the diversity of those birds (pheasants), hares, and rabbits, that renders this kind of shooting so superlatively interesting. The most sportsmanlike and agreeable party that can be formed for this purpose is two or three guns—not more—and two beaters. The number of the latter are indispensable; but when the party is composed of half the rabble from the village, I must confess it does not coincide with my ideas of sport. It may be argued that, under such a course, more game may be brought to bag if pot-hunting be the incentive. I admit the efficacy of the plan; but, if sport be the object, it

could be had without the assistance of the canine race. In small covert, thickly stocked with pheasants, it is very certain that many will get away without even a chance of being shot at: but then they may be found again in the adjacent fields and hedgerows, where the science and sagacity of the setter or pointer may be most admirably applied. In some instances where the covert is on the outskirts of the manor, and the game which escapes cannot be followed, there may be some excuse for employing, tipped beaters; but they should be accompanied by a steady old Pointer or Retriever.

### [Reminiscences of Racing and Racers, in 1845.]

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 488.)

There is one thing to be remarked in the comparison of the British horse with that of any other country, as applied to race-horses, which is, the previous training the animal undergoes, and the severe ordeal he has to pass through before he appears on the course. It is enough to break down a giant, and that animal which survives it must indeed be an object of admiration and praise. I was led to make this remark in consequence of a comparison I heard instituted between the racers of the United States and of England. I apprehend there are many horses in Great Britain and Ireland which, if reserved for the purpose, could accomplish anything that has been done in America. At the same time, with the allowance to American horses in weight, there cannot be a doubt the horses of the British stud in a race for the Goodwood Cup would be in jeopardy, should New Fashion, in her best form, contend for it. Most of our good horses, too, run ten or twelve times in the course of a season.

On July 29th, Goodwood Races commenced with the Craven Stakes, which fell to Discord, Beaumont, second; being good enough to beat Hawkesbury and Pic Nic. A very important event, the Ham Stakes was closely contested by several colts and fillies in the Derby and Oaks. The Stakes are 100 sov. each, 200 sov. for second, half forfeit. It was a pretty race; Princess Alice and Cuckoo went away with a lead, followed close by Wilderness, who soon went forward and made the pace good; at the half distance the Princess Alice fell back, and Samphire, coming forward, she, and the other two, ran abreast for some time, when Lady Cecilia, making her effort, caught Cuckoo and Samphire, and won by a head; Cuckoo beating Samphire by half a length. The only others in the race were two colts, Iago (disqualified now) and Morocco, and Wit's End, a filly. The 300 sov. Sweepstakes was a race between four bad ones; two did not pass the chair, and Joe Lovell beat Best Bower by a neck. It is a three mile and a half race, and was tolerably run. Old England won the Drawing Room Stakes, he was rode by Sam Day, and beat Longitude (Nat), and Pic-Nic (J. Marston). The Merry Monarch, in a race for the Gratwicke Stakes, was most unaccountably beaten by Hersey (Nat) by a head; Cowl broke down so badly as to be withdrawn altogether from running. Captain Pettat on Quebec beat "The Squire" for the Goodwood Club Stakes on his own Sorella; Lord Maidstone on Arcanus was third. Another important race on the coming events, took place in a contest for the Lavant Stakes. Cherokee, Mendicant and Sting made all the play, the middle one leading up to the stand, where Sting went up and disposed of her, winning by a length. Mendicant, however, beat Cherokee two or three lengths, Collingwood and Cambeales were beaten off, and the latter need not be even thought of. For the Innkeeper's Plate of 50 sovs., added to 5 sovs., Parthing Candle (two years old) shewed such a light upon the subject, and so completely bade the other "stars hide their diminished heads," as to induce her present proprietor (for she was claimed according to the articles) to call her *Chandelier*. She is a filly by Bay Middleton, out of Torch. The next day, July 30th, commenced with a victory by old Shadow, for the Stand Plate, by Croton Oil. Killie Krankie won the Cowdry Stakes, and was claimed; the Colt by Mus, out of Guava, second; Deer Chase, third. That awful betting race, the Goodwood Stakes, came off in rather heavy weather, and, to the surprise of most folks, was won by Miss Elis, beating a large and good field by several lengths; Roderick beating Lothario for second place; Venus broke down. Red Deer beat the Shadow by a head for the Queen's 100gs. Plate. Lord Stanley won the Steward's Cup, a very handsome piece of plate, with Psalmisinger, beating a very fair field, over three quarters of a mile. In a race on Thursday, July 31st, for 200 sovs. Sweepstakes, Princess Alice beat Wilderness by a neck, after a fine race; Malvoisie was altogether out. In another Sweepstakes, 200 sovs., colts and fillies, Arkwright won easily, beating Binnacle, Sombrero, Wooden Wall, and Ukraine. For the Melcomb Stakes, Sting (7lb extra) beat the following eight others; Cuckoo second; Sotades third; Green Pea, Dawdle, Ferney, St. George, Spur, beaten off, and Polka a bad fourth. I believe this to be the last race of Sting before the Derby, except the one I shall have to mention when I come to speak of the Newmarket Meetings in October last. Your readers must make their own observations on his performances; I will, however, just observe that in the last race, with the exception of Cuckoo, there was a very bad

lot. Worthless beat Longitude and Pam for the Racing Stakes, and to the surprise of most people, Miss Elis beat Weatherbit, after a fast race, and in which the horse was urged to his utmost, for the Goodwood Cup; My Old Hack third; that unfortunate animal, Gohambury, followed by all the rest by two or three lengths. The pace was so severe that five or six others were pulled up. For the Sussex Stakes, Cuckoo, after a sharp race, beat Samphire by a neck. Wilderness beat Tug-net and Morocco for a 25 sovs. Sweepstakes; she passed him easily. Dean Swift and Venatrix beat Queen Mab and Psalmisinger for the Richmond Plate; the two last mentioned had the call; several others were beaten off. For the Anglesey Stakes Mr. Rolt, on Coal Black Rose, beat Croton Oil (Lord Maidstone) by a head; Sorella, rode by the Squire, an in different third. Had not Croton Oil broke away, and wasted himself, he would certainly have won this race. The Laird o' Cockpen walked over for two good things. For the Chesterfield Cup, a very good field competed, and after a good race, with a sharp struggle at the close, Ægis was placed first by a head; Needful second; and Semiseria third. Miss Elis, Lothario, Vandeville, and Knight of the Whistle were in the race, and well up; but Remorse, though not placed, was fourth. For the March Stakes, an Irish mare, Beatrice, won the First Class, having less weight than the others; and for the Second Class Wolf-dog, an Irish horse, was placed first. In the challenge for the March Stakes Naworth (11st), and Karnac (10st 6lb) beat both Beatrice (11st 5lb), and Wolf-dog (11st 1lb), a very capital race; all three races were among gentlemen jockeys. Refraction, after a dead heat with Queen Pomare, won the Nassau Stakes; Stich being a bad third; H. Bell, rode Refraction. After a leading race for the Bentinck Stakes by Fickle-wild-rose (Mr. Clifton), Best Bower (Lord Maidstone) went up at the rail, and after a capital race won by a neck, thus ended the Goodwood of 1844, a meeting of a very superior character as to attendance and sport. The last three days were not however what was desired as to weather; very wet, and parts of the course swampy.

At LUTON, July 22, a horse called Laird o' Cockpen ran and was beaten; not the real *Simon Pure* I reckon.

At LEOMINSTER, July 30, Isaac Day's filly Zela, by Bubastes, won the Herefordshire Stakes, and a gelding, the Jailor, won two races.

At Yarmouth, July 30, Mr. Theobald won some races with his Desperation, and the Devil-among-the-Tailors won one race out of five he was in.

At BARDENORTH, July 31, Princess Royal won two races, and Nixmy-Dolly the Gold Cup.

## CORRESPONDENCE.

### RABBIT SHOOTING.

To the Editor of THE SPORTSMAN MAGAZINE.

SIR,—No sport is more pleasant to me than rabbit shooting. The rabbit, as every one knows, is very timid and very acute of hearing; for which reason care should be taken to make as little noise as possible; and in particular never to walk or run in the passes or across the woods to get before them, but at those times only when the dogs give tongue; for then the rabbit being occupied with either listening to the dogs or running before them, pays less regard to the noise which the sportsman makes in the pursuit.

Skill and practice, but above all quickness, are eminently necessary to shoot rabbits in a wood, either when the rabbit is hard run by the dogs, or at the moment of starting up or in view; and still more so when pursued by a spaniel who has struck but missed her. If at this time a rabbit crosses a road or a path cut through the wood, she starts like lightning, and scarcely gives the shooter time to prepare himself, unless the way is very broad.

It is also very difficult to shoot her when she gets up from among his feet, whether in a wood or in places covered with heath or brambles, which adjoin a warren, and where they are most commonly found. The course of a rabbit, for some little time at first, is much more rapid than that of the hare, and is at the same time oblique and twisting. It seems to glide, rather than run, and the proper moment of shooting is not easily seized.

If at any time of the day, but principally from nine in the morning until noon, and again in the evening about sunset, the sportsman posts himself near some well frequented burrows, either by getting up into a tree or lying behind a hedge, he will soon see them come out of their holes, and play about the hedges, at which time he may shoot them to great advantage. Or he may in the evening watch those pieces of corn lands which lie near the warren, for thither the rabbits are certain to be at that time to feed.

Rabbits being accustomed to run about much during the night, which is the case in the woody district of this neighbourhood may be more easily shot by moonlight by watching at those places where they come to play or feed, or a ferret may be put into the burrows and the rabbits shot as they bolt out; but this is so rapid a motion that great quickness of shot will be necessary.

Your very obediently,

Ilford, near Christchurch, Hants, Dec. 12, 1845.

W. HUMBY.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1793-1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER XL.

JACK SCROGGINS,—(continued.)

Four months had scarcely elapsed when Scroggins again made his appearance in the prize-ring, but under very different circumstances. Having in his last combat defeated one of the most scientific boxers of the day, he was now called forth to enter the lists with a complete stranger, and a mere novice. It appears, that Whittaker, from Denbigh, in Yorkshire, and an oilman by trade, had criticised the milling talents of Scroggins rather freely in company; which conversation, ultimately, produced a battle between them. The sum contended for was fifty guineas a-side, and so much confidence did the oilman feel upon entering the ring with Scroggins, (notwithstanding his name was a sort of terror to pugilists in general,) that he put down thirty-two guineas of the stakes out of his own pocket. Scroggins viewed Whittaker with so much indifference, that he thought he had merely to take off his coat and win the fight. On Tuesday, the 9th of January, 1816, the fistic heroes met to decide this trial of skill at Moulsey-hurst. The oilman was understood to be a game man; and so much interest was excited in the sporting circles, that upwards of ten thousand persons witnessed the battle. The odds were two to one upon Scroggins, who was seconded by Oliver and Clark; Whittaker was attended by Cribb and Richmond. The men shook hands, and at one o'clock the set-to commenced:—

## THE FIGHT.

1. The amateurs expected more of a smashing than a scientific fight; Scroggins thought so little of his adversary, that he went to work *sans ceremonie*, but hit short with his left hand; the oilman, in return, planted a slight nobber. The combatants fought their way into a rally, and some sharp blows were exchanged, at the end of which the claret was seen trickling down Whittaker's face. (No variation in the betting.)

2. The oilman seemed full of pluck and eager for battle. Scroggins again hit short, but Whittaker improved on the opening, and made a sharp left-handed blow. Some desperate milling occurred; no want of spirit on either side. In closing, much struggling took place, when the oilman got away, but was ultimately sent down.

3. This was altogether a well-fought round: and if the oilman did not how superlative science, he evinced qualities that convinced the spectators he was not to be beat off hand. Scroggins attacked his adversary with much determination, and Whittaker showed equal resolution in a sharp rally, till he went down.

4. Science was not the forte of the combatants; downright milling was the order of this round. Scroggins missed several hits, and did not appear to such advantage as was expected. The oilman fought with much steadiness and composure, and his left hand, in some instances, was successful. The men rattled in a close, when the oilman, with much dexterity, threw his adversary. The odds nevertheless were still high upon Scroggins.

5. It was evident that Scroggins had paid little attention to training; and, at this early stage of the fight, his wind appeared rather treacherous. The oilman attacked his adversary in good style, and had the superiority of hitting. Scroggins slipped in making a bit, but soon recovered himself upon one knee, and with much force levelled his man.

6. Both combatants on their mettle; reciprocal fighting took place. The oilman proved himself a much better man than he was thought to be previous to the battle, and the odds fell to 6 to 4.

7. Scroggins came to the scratch much distressed and out of wind. The oilman improved upon this circumstance and made several telling blows ultimately finishing the round in his favour. (Applause.)

8. Scroggins could not recover his wind; and, to avoid receiving punishment, resorted to some strange manoeuvres to amuse his adversary. But the oilman was not to be deluded, and stuck to Scroggins hard and fast till he was thrown.

9. Scroggins came up fresher, and attacked his opponent with unshrinking courage. A rally took place, which was desperately contested; but finished to the advantage of Scroggins, who darkened the oilman's left peeper.

10 and 11. Both of these rounds were fought with manliness and resolution; it was plain Scroggins had got considerable work to get through, before victory would crown his efforts.

12. The oilman seemed more conspicuous for high game and wrestling capabilities than a sound acquaintance with the principles of the pugilistic art, he threw Scroggins in great style.

13 and 14. Rather in favour of Scroggins.

15. Here the oilman showed to much advantage. He put in several blows, both down.

16 to 30. Several trifling changes occurred during these rounds; in one of which, Scroggins met with an accident in falling, which might have terminated the battle; but his fortitude as well as policy was so great, that, notwithstanding the excruciating pain he suffered from a severe private injury, he did not even communicate the circumstance to his second, but fought on under considerable disadvantage. From the numerous antics and manoeuvres he played off, he recovered himself in some degree, and succeeded in damaging his opponent's remaining eye.

31 to 49 and last.—It is unnecessary to detail the whole of these rounds; suffice it to observe the oilman contested the whole of them with resolution and true game. He fought till without the powers of directing his blows; in

the last three rounds he was in a complete state of darkness. He resigned the contest with considerable reluctance; urging his not being reduced in bodily strength. In fact, he was humanely persuaded, by Mr. Jackson and his friends, to retire, as he had no chance whatever, from his defective vision. In other respects, there is no doubt but he might have protracted the battle.

Scroggins, had nearly given the chance away on this occasion, by overweening self-conceit, and the contempt with which he viewed the pretensions of Whittaker; the victory indeed was more owing to his good fortune than to judgment. He laughed at the idea of training to beat a novice, and never left his home for a single night. In consequence of this neglect, he took an hour and sixteen minutes to beat Whittaker, which, had he been in good condition, it is presumed he might have accomplished in half an hour. Scroggins, (almost too late,) found out the fault he had committed from neglect of training. It was a fortunate moment for our hero when the oilman was taken from the ground. The memorable defeat and ruin of Broughton ought always to operate as a useful lesson to all pugilists—more especially to conquerors—respecting their preparatory conduct. Scroggins had nearly fallen a victim to this blind confidence; his fame was tottering on a precipice. Scroggins too was extremely incorrect in his distances; but neither of the combatants fought upon the defensive, it was all milling throughout the battle. Whittaker was evidently the better wrestler; and Scroggins appeared more punished about his nob than in any other battle. Had not Scroggins succeeded in closing the remaining peeper of Whittaker, the termination might have been rather doubtful, as the latter was not seriously disabled in body nor distressed in wind; and if he retired from the ring a defeated man, it is but common justice to state, that a gamer pugilist than Whittaker never quitted the field. Thirty pounds was collected on the ground by Mr. Jackson, as a reward for the bravery the loser had displayed. Notwithstanding the latter resigned the contest, he still entertained an opinion that Scroggins was not the best man, and attributed the chance going against him to his being a stranger to the tactics of the prize-ring.

From the rapid conquests he had obtained, Scroggins was at this period the envy of the boxing circles. His lush crib was numerous attended—he was enjoying the fruits of peace and the rewards of his victories—smoking his pipe with ease and pleasure—and laid up as it were in ordinary, resting from the fatigues of war. But “peace” was not the element in which Jack was seen to advantage; therefore, out of numerous challenges offered to him, he accepted one from a countryman of the name of Church, a native of Gloucester, who, it seems, “had heard of battles,” and, thirsting to obtain fighting glory, had determined to lead “a dull inglorious life” no longer. He left Gloucester for the avowed purpose of challenging our hero; and Colonel Berkeley, his patron, had so high an opinion of his qualifications, that, without the least hesitation, he backed him for 100 guineas. Church, it appears, had milled all the best men in Gloucestershire, was well known as a staunch bottom chap; was well-made, taller than his adversary, and possessed a hardy and erect frame. Upon the match being made, he went into training near Enfield; during which period he gave proof that he was capable of performing no little in the milling way. Three countrymen called at the house where he resided, and rudely challenged him to fight. Church, shamefully careless about the engagement he was under, with more rashness than judgment, accepted their offer; fortune favoured him, for in a very short time he disposed of the whole three in the most satisfactory manner, and public report declared he was likely to turn out a troublesome customer for Scroggins.

On Tuesday, August 20th, 1816, the men met, and Moulsey-hurst was once more the theatre of pugilistic display. Myriads of persons left the metropolis, in all directions, to view the renowned Scroggins, among whom were Lord Yarmouth, Col. Berkeley, Captain Barclay, &c. Vehicles of all descriptions, from the barouche and four to the scavenger's mud-cart, were in requisition at an early hour, to reach the destined spot; the blood-horse, in all the pride of high breeding, was galloping by all, and the more humble donkey and spare nacker trotting and snorting along the road, to be up in time. Pedestrians of all ranks formed one moving scene, and by twelve o'clock many thousand persons crowded the hurst. Church appeared first, and threw his hat into the ring; Scroggins shortly following his example. The former was seconded by Tom Belcher and Bill Gibbons, the latter by Cribb and Clark. At a quarter past one the men shook hands; three to one on Scroggins. The battle lasted 58 minutes, and 50 rounds took place, as follow:—

## THE FIGHT.

Round 1. Scroggins, on setting-to, seemed anxious to be at work, but hit short; he, however, soon made up for this deficiency, by giving his opponent two desperate facers, which produced the claret in a twinkling. Church seemed electrified with the severity of his hits, exchanged a few blows, turned round in confusion, and was, ultimately, sent down. (3 to 1 on Scroggins.)

2. Church appeared at the scratch, bleeding copiously. Scroggins set-to

most determinedly, and soon showed his opponent the severe punishment he was likely to encounter, by putting in two severe blows, right and left, on his nob. Church again turned round confusedly, but drew the cork of his antagonist. Scroggins evinced his superiority, and finished this round most decidedly in his favour, by sending his man down. (In this early stage of the fight, the spectators made up their mind to the ultimate event, and 4 to 1 was offered.)

3. Church did not know what to do with his antagonist, he was quickly sent down by Scroggins, who held up both his hands.

4. The position of Church was good, but there was nothing of the scientific boxer about him; nevertheless, he put in some good hits, and, in closing, both went down. Scroggins rolled over like a tumbler.

5. This was rather a severe round, and, in closing, Church endeavoured to fib his opponent, both down.

6. Scroggins went furiously in to mill his opponent, which he did most effectually, and sent Church down. Both their mugs began to show the effects of punishment.

7. Scroggins seemed determined to finish his opponent, but twice hit short; he rushed in and took great liberties with his nob; Church again went down.

8. Church appeared to have no notion of protecting his head from the attacks of his opponent. He not only received two desperate facers, but was punished severely at the ropes, and milled down.

9. In this round Scroggins had it all his own way; he hit Church quite out of the ring. (Great applause.)

10. Some good exchanges; in closing, both down; but Church undermost.

11. Church broke away from a close, and got into a rally, but he was, at length, sent to the ground.

12. In favour of Church, he put in two good blows, but in closing both went down.

13. Scroggins hit him quite round against the ropes, and Church was sent down.

14. Scroggins put in a facer, and Church went down.

15. Church made a hit and fell down. (Nineteen minutes.)

16. Scroggins put in two facers, turned suddenly round with all the agility of a dancing-master, and ended by flooring Church.

17. Scroggins broke from a close, and exchanged some blows; but Church ultimately threw him.

18. Church made one or two good stops, but was sent down.

19. Scroggins milled his opponent in all directions without receiving any return, till Church went off his legs.

20. Scroggins was the principal receiver in this round. In a close both down.

21. Scroggins, with the utmost sang froid, on setting-to, floored his man, and stood over him with the utmost contempt.

22. Scroggins measured his distance again well, put in a tremendous facer, and ultimately threw his opponent.

23. Church felt for Scroggins' nob twice, and threw him.

24. Scroggins received a hit at going in, but, in closing, both went down.

25. Church put in a facer, but Scroggins soon floored him.

26. Church, with much severity, bit his opponent quite away from him, and had the best of the round; in closing both went down.

27. Church seemed in this round totally off his guard. Scroggins put in seven severe facers in rapid succession, till he sent Church down. (Twenty to one.)

28. Scroggins determined to lose no time, pursued his advantage with the utmost spirit, dealing out punishment at every step. His rush was not to be resisted, and Church again went down.

29. Church gave his opponent a check upon his nob, as he was going in, but it did not ultimately prevent Scroggins from boring him to the ropes, and getting him down. (Any odds.)

30. Church was completely on the taking system; the knowledge of giving he seemed totally ignorant of. A greater glutton was never seen, no common caterer could serve his inordinate appetite. Scroggins hit his adversary off his legs.

(To be continued.)

## ANTELOPE COURISING.

BY MASTER HARRY.

Having taken a view of the four leading sports of India, it now only remains to give a sketch of the minor ones, which afford an equally exciting and amusing pastime to those whose sporting propensities are of a less savage and dangerous nature. Foremost among these sports stands antelope courising with the cheetah.

This latter animal is a miniature tiger, or rather leopard, endowed by nature with the same characteristics of cunning, bloodthirstiness, and muscular power as its prototype. In its wild state, the cheetah will hunt down its prey for its blood alone; but when domesticated, as it commonly is in some parts of India, more particularly so in the Bombay presidency, it is used expressly for hunting the antelope, which it pursues with a swiftness and precision truly remarkable in so small an animal.

There is a vast deal of tameness about this sport after one has entered the lists with the tiger, and met the elephant face to face in its native fastnesses; but it affords sport to the ladies at all events, and stands, as it were, in India, in the position of what hawking has done in England. The antelope is found in various parts of India, although this sport is confined to but a few. I believe it is pursued casually in the south of Madras, but not to such an extent as it is in Bombay.

Everybody has seen an antelope, so I need not attempt to describe what Wombwell's showman has done so forcibly and "poetically" to most of us at some country fair, where we doubtless recollect to have heard asked by some innocent country "Phillis"—"Please, Mr. Showman, which

is the lion, and which is the antelope?" And too well we recollect, perhaps, the accommodating answer of the interrogated—"Vich ever you please, my dear."

On the day previous to a hunt, the cheetah which is to be taken out is kept without his dinner, to give him greater satisfaction in the amusement of the morrow, when he earns it for himself. And when the "time is up" for starting on the day of chase (this sport, like all others in the far East, being pursued at day-break), the animal is first blindfolded, by having a cup pulled over his interesting countenance, then muzzled, and finally placed on a hackery—a platform on wheels, drawn by two bullocks—in which situation he bears altogether as close a resemblance to some malefactor on his road to Tyburn in days of old, as can well be imagined; and when all this has been arranged, off he starts, accompanied by his keeper, and followed by a suite of Jaibs and Ma'am Jaibs, either on horseback or on elephants, that would not disgrace the court of a nigger prince.

Instead of the gun, the rifle, or the hogspear, the party arm themselves with the more harmless telescope, and if on the back of an elephant, with a huge umbrella also, made of the leaves of the tallipot tree; whilst those who go for a gallop make a solah toper, an awfully broad-brimmed hat, made from a pulp extracted from the solah tree, do the duty of the monster parasol, and trust to their horses' speed and their natural optics to bring them within sight of the finish.

The ground on which the antelope is generally found and hunted consists of a series of undulations, which can be likened to nothing better than a sea with a long, heavy swell on, being free from jungle, or nearly so; and between these undulations the body of the antelope is entirely concealed, and, as they are proverbially timid, it requires no slight degree of generalship to get near them. On reaching the ground, the eagle-eye of the shikaree wallah and the telescopes of the hunting party wander round the horizon in search of the antler of the quarry, which is, of course, the first visible feature, and at a distance where one of, what Samuel Weller calls, limited vision would fail to descry an elephant, the practised native marks and gives notice of the moving antlers of the antelope.

And now commences the business of the sport. Plucking a handful of dried grass, the master of the ceremonies (which important function is vested in the nigger) throws it in the air, to discover which way the wind blows, as from the power of scent with which the antelope is endowed, it is absolutely necessary to approach them up-wind. When this point is ascertained, and a proper position taken up, the cavalcade moves forwards to as near a contiguity to the prey as is considered expedient, when the cheetah is at last divested of his hood, and taken off his cart. It is not difficult to make him understand the whereabouts of the victim; he catches sight of the antler, or rather, perhaps, he scents the hidden beast in an instant, and crawling, in company with his keeper, who still leads him, he reaches the summit of the "wave," on the other side of which grazes the unsuspecting herd of antelope. His trammels are then slipped off, and the surprised animals view their deadly foe within a hundred yards of them. For a moment all is, "confusion worse confounded!" the terrified brutes break off in all directions. But ere the commotion is begun, one alone has riveted the eye of the cheetah; and, disregarding all the rest, off he dashes into his full stride in pursuit of the victim, the field following as fast as they are able.

And now comes the excitement of the scene, such at least as it possesses. Pressing on at tip-top speed, you keep the chase in view. At first the superior speed of the antelope causes him to gain the ground, but not possessing bottom to back it, this advantage cannot last long. On, on they speed over the sandy flat, the poor antelope straining every muscle to save its life, the cheetah intent only on his prey and his dinner, his previous starvation having added a fresh stimulus to his pace, whilst the field are kept at a respective distance; and he that views the death must boast of a decent bit of horseflesh. Shortly—for it is soon over—the antelope visibly slackens its pace until but a few yards intervene between him and his pursuer; he feels the hot breath of the cheetah already upon him, and plunges desperately forward; but nature refuses to do more. Swift as lightning crouches the cheetah, in his stride as 'twere, to the ground, to gain a better spring, then darting himself forward in the air, literally, as an arrow from a bow, he alights on the neck of the worn-out antelope, and brings it to the earth. Throwing back its head, the stricken deer appears to give one last imploring look to heaven, whilst the tears that roll down its face might betray that there was even a soul within, that prompted that dying glance. Alas! it avails him not from the merciless jaws of his enemy, who either strangles him then and there itself, or holds it until the "field" comes up and cuts its throat. When this is done, the cheetah gets his "blow out" from the blood and entrails of the dead animal, and having been replaced on his cart, together with his prostrate foe, he is again drawn home, apparently as well pleased with the morning's amusement as any one of the party, if not better.

There is a terrible sameness in this sport; a "find" is always certain, or nearly so; and when that is over, the only thing left is a good gallop over the flat. No leaps, no charges, no chance of even a scratch—no fun, "no nothing;" like courising in England without even a "jump"—"like the tragedy of Hamlet, with the part of Hamlet omitted."

# ADVERTISEMENTS.

**G. Y. BALL,**  
REGISTERED DAGUERRETYPEAN PORTABLE  
LOOKING GLASS.

**NOVELTY, UTILITY, CONVENIENCE,  
COMFORT, AND ECONOMY.**

THE DAGUERRETYPEAN LOOKING GLASS.  
If you value personal comfort, neatness of appearance, cleanliness and acceptability at the social board, or the society of the fair sex, provide yourself with the last triumph of cheapness, ingenuity, and utility. It is a portable pocket mirror, in a brass case, suited to suspend against the wall, hold in the hand, lie flat, or be self-supported at an angle of forty-five degrees on table or shelf, presenting in a conspicuous form a looking glass, a shaving reflection, and an invaluable counsellor after the heat of the race, the side, the promenade, or before the entering a ball room, and in fact no person ought to be without one.

To be had Wholesale and for Exportation at 86, Newgate-street, London.

**EVERY MAN HIS OWN HARNESS MAKER.**

**THE DURHAM DUCIE HUNTING AND**  
Travelling Knife.—J. R. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of noblemen, sportsmen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.

By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

Windor Castle, Oct. 4, 1845.  
"Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

**BILE! BILE! BILE! — WORBOY'S**

**VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual constiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½d., and 2s. 9d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.

N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

THE MOST POPULAR WORK OF THE DAY.  
On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence  
Volume I. of

**THE MYSTERIES OF LONDON,**  
By **GEORGE W. H. REYNOLDS,**  
Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.  
\* \* This magnificent volume contains 494 royal octavo pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies.  
London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

Now ready, the First Number of the new and popular Historical Romance of  
**MARGARET OF NAVARRE;**

**THE MASSACRE OF ST. BARTHOLOMEW'S EVE;**  
BY M. ALEXANDER DUMAS.  
This Work is published uniform in size and price with "Marie Antoinette" (Penny Numbers and Fourpenny Parts), and with the number is presented a beautiful engraving of  
**THE MASSACRE OF THE HUGUENOTS ON ST. BARTHOLOMEW'S EVE.**  
With the Second Number, a splendid Vignette on steel gratis.  
\* \* Other works by the same celebrated Author are preparing for the press, and will be speedily announced.  
London: G. Pierce, 310, Strand.

**SPIRIT-STIRRING AND STARTLING ROMANCE.**  
This day is published Number Three, price One Penny, of the popular Historical Romance, entitled  
**ROBERT OF BRTOIS;**  
Splendidly illustrated. This interesting and original production is one of the most successful of modern times, its Gorgeous and Interesting Scenes, Moving Adventures, and Splendid Delineations of the most Famous Characters of the fourteenth century are unrivalled.  
London: E. Farrington, 16, Bath-street, Newgate-street; Heywood, Manchester; Smith, Liverpool; and all Booksellers.

**NEW WORK JUST OUT.**

**THIS day is Published, Price One Penny, the**  
First Number of PUNCHINELLO, a Journal of Wit, Wisdom, and Romance, containing Punchinello's Address to the Public; Should Sir R. Peel have a Statue; Modern Philosophy; a Popular Romance; and a variety of Tales, Anecdotes, &c.

**NOW PUBLISHING,**  
No. 1 of a Romance of Real Life, entitled,

**LIFE IN LONDON.**  
By J. Herbert Thorneley, Esq.  
Embellished with first-rate Engravings, and printed upon a Large Royal Paper of excellent quality. Numbers One, Penny each. Monthly Parts, in Embellished Wrapper, price 6d.  
E. DIFPLE, Holywell-street, and all Booksellers.

**QUEEN'S HEAD, QUEEN'S HEAD COURT, WINDMILL-STREET, HAYMARKET.**

**JEM BURN** Respectfully Announces to the patrons of the Good Old English Art of Self-defence, that he has re-opened his great room, where the illustration, exhibition, and practice of Sparring will take place every Monday evening during the winter-months. Master of the Ceremonies, and Gentleman-usher of the Bunch-of-fives, Uncle Ben. Johnny Hannan, and several top-sawyers, will put on the muffers, and "teach the young idea how to shoot." The saugery affords an admirable retreat for the Cerinthians, the club-room is commodious for the commonalty, the champagne celestial, the port potent, the brandy without any admixture of B.B., and the malt of all sorts miraculous.

God Save the Queen! [and sustain her HEAD.]

**NO MEDICINE for the CURE of ASTHMA**

and Consumption, Coughs, &c., was ever attended by speedy and unfailing success as **DR. LOOCK'S PULMONIC WAFERS.** In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.

From Mr. Lynch, Chemist, Market-street, Manchester.  
October 22nd, 1845:

"Gentlemen, I enclose you a letter received from a party who has derived great benefit from Dr. Loock's Wafers; I have no doubt if you were to advertise them in this town, the sale would be considerable, as we are constantly receiving testimonials of their efficacy. I am, &c.,  
J. R. LYNCH."

Extraordinary Recovery from an Asthmatic Cough of 29 Years' standing.  
"Middleton, near Manchester, July 28th, 1845.

"Sir,—I am now forty-four years of age, and I have been afflicted with an Asthmatic Cough since I was a boy of fifteen years of age, during that time I have resorted to every means in my power to remove it, but in vain, until last Sunday, when I sent for a small box of "Dr. Loock's Wafers;" I have taken two boxes since, and from the effects they have had upon me, I feel no doubt of a speedy recovery.  
(Signed) GEO. STRINGER."

**DR. LOOCK'S WAFERS** give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1½d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

**CAUTION.**—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words **DR. LOOCK'S WAFERS** in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.

**THE EARL OF ALDBOROUGH**

**HOLLOWAY'S PILLS.**  
The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Mesina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY,—  
Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case of any of my family should ever require either.

Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines THROUGHOUT THE CIVILIZED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 22s. and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 18, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street; Soho, and all Booksellers.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination; scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin. Secondary Symptoms.

**THE CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-penny cases may be had as usual.

Just Published, the **SIXTEENTH EDITION**, illustrated with cases and "Full-length Engravings," price 5s. 6d. in a Sealed Envelope, and sent Free to any part of the Kingdom on the receipt of a Post Office order for 3s. 6d.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.

At 106, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deansgate, Manchester, on Mondays, Tuesdays, and Wednesdays.

**LONDON**—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIFPLE.—Thursday Dec. 20th, 1845.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 33. FOR THE WEEK ENDING JANUARY 3, 1846.

[Stamped to send free by Post, Three-pence.]

THREE HALF-PENCE.

GROUP OF DOGS, AFTER LANDSEER.

**G**HRISTMAS comes but once a year," saith the proverb, and the fact affirmed none can dispute; there is another ancient saw too, full of the pithy wisdom of our ancestors, which declareth "accidents will happen in the best regulated families," and the truth of both our present number exemplifies. Stoutly had we resolved that this, the first number for 1846, should bear upon its front the first of our promised series of Foxhunting Views," when lo! Christmas cometh, and with him the love

of enjoyment, and the "good cheer," which rhymeth with the line that heads this paragraph. Our devil would wash his sooty visage, don a white shirt, and disport an unrecognisable clean face among the Gods at "Ashley's;" the "slaves of steam" who imprint the reams of "transformed rag" which convey these thoughts to thousands "hope that we will be early in the week, as they wish to make holiday;" the engraver hereon declareth, that "unless we wish it spoiled," we must postpone the cut till the holidays are over! And lastly, gentle reader, our lazy self is glad of an excuse. So thus you have a cut intended for a few

weeks hence, and are candidly let into secrets you have no business to know. *N'importe!* here you have a GROUP OF DOGS AFTER LANDSEER, and we doubt not that many an one of our subscribers will approve of the substitution. Of the Group we would observe that it consists of:—

1, An Alpine Spaniel (popularly, but erroneously, called the Alpine Mastiff); 2, The Shepherd's Dog; 3, A Blenheim Spaniel,—and that the pencil from which they have proceeded is sufficient guarantee of their fidelity and truth to nature. To say aught upon the individual animals would be unjust, in the limited space to which this article is, from stress of circumstances, confined; and this is the less to be regretted, as in the promised series of articles on the Doo, we shall take "scope and verge enough," in illustration, anecdote, description, and directions. For the present, therefore, we bid this interesting trio of animals farewell.

## CORRESPONDENCE.

### DIFFERENT SORTS OF HARES.

To the Editor of THE SPORTSMAN'S MAGAZINE.

SIR,—Xenophon says, "there are two species of hares, one large, mottled with black, and having a great deal of white in the forehead; the other less, of a yellowish color, and having little white." He also observes, "that mountain hares are swiftest; those bred in a plain country, less so; and marsh hares the slowest of any." As to any real difference in the species, it may be, perhaps, difficult to determine; I always found they corresponded in shape and similarity; but vary like other creatures in size and abilities; which I believe proceeds from nothing more than their difference of feed and situation, and may be ranged under the few distinctions of the down hare, the field or inclosure hare, the marshy and woodland hare.

The mountain or down hares feed short and sweet, breathe a fine air and enjoy an extensive compass for exercise; they are found to excel in strength or celerity, and stand a hunt longer than any other hares. In dry seasons they commonly make excursions into the vales for diversion and relief. I have often myself remarked, and have been informed by shepherds and hare feeders, that hares are never more plenty on the hills than in wet weather, the reason of which is plain; they feed, form, and exercise on drier turf than the valleys then afford.

The inclosure, marshy, or woodland hares, are experienced to be slower, weaker, and more unfit to endure hard hunting than the down hares; the situation and manner of their living being opposite; they relieve on too rank strong food, and that too near their forms; their circle of exercise is more confined, and liable to disturbance, and the air they breathe is less pure and correct, whence they become pursey and short winded; of this sort are the hares in the wolds, many of which I have seen, when panned, with ulcerated lungs and unsound.

There is another sort to be met with, (though very seldom), different from either of the kinds mentioned, which wander about like vagrants, living at large and with indifference in all places, seating vastly uncertain, sometimes in the inclosure, hedgerow, brake, or strong covert; at other times in the open common or fields. These are the hares for diversion; they are the most difficult to judge of, and the most dangerous to pursue; they ramble through the barn yard in the night, and disregard the gaunt growling mastiff: traverse the orchard and garden, intrepid and fearless; explore the dangerous pond-head, nor dread the roaring waters; regale on the virgin grass, the tender clover, or young turnip (or as some hidden cause directs) neglect them all, to browse on the budding twig. When started, they seldom keep any certain ring, but drive on irregularly, trying all sorts of ground, the turf, the hard high-way, the watery puddle or dry dusty fallow, and lead the weary sportsman many a painful step and through many a dangerous passage.

In conclusion; it is mentioned by Xenophon and confirmed by Pliny, that hares conceive again before they bring forth their first young; and Sir Thomas Brown, in his "Treatise on Vulgar Errors," (a work in which he would be naturally cautious of introducing the marvellous) asserts this circumstance from his own observation.

Your humble Servant,

H. D.

Carmarthen,  
December 11, 1845.

## ARCHERY.

SHOOTING EXTRAORDINARY.—Mr. Editor: I beg to forward you the result of a match, for the information of all lovers of the noble pastime, shot by Mr. Marr, the present captain of the Fraternity of St. George, a fortnight since, with nine dozen arrows, viz, 36 arrows, at 100 yards, 24 hits, score 114; 36 arrows, at 80 ditto, 33 hits, score 118; 46 arrows, at 60 yards, 35, hits, score 181; total 423. Such an extraordinary score is not to be found in the annals of archery with the same number of arrows and distances. In comparing it with the great meeting at York, where all the best archers were assembled and which was recorded in the SPORTSMAN'S MAGAZINE, you will perceive in a moment its greatness. The match at York was with 24 dozen arrows, viz, 12 dozen, at 100 yards; 8 dozen at 80 yards; 4 dozen at 60 yards; score 535. To encourage young aspirants in archery, I beg to say Mr. Marr twelve

months ago was the worst shot belonging to the club, but by perseverance and constant practice that gentleman is now the first shot in England. I can vouch for the correctness of the above, having had the honour of taking the score.

Yours obediently,

J. HUTCHONS.

(late captain of the Fraternity of St. George.)

Archery Ground, Hamilton.

## EXTRAORDINARY INSTANCES OF LONG ABSTINENCE, PARTICULARLY IN THE BRUTE CREATION.

To the Editor of the SPORTSMAN'S MAGAZINE.

SIR.—Among the brute creation we see extraordinary instances of long abstinence. The serpent kind in particular bears abstinence to a wonderful degree. I have seen rattle-snakes that have subsisted many months without any food, yet still retained their vigour and firmness. The celebrated Dr. Shaw speaks of a couple of cerastes (a sort of Egyptian serpents), which had been kept five years, in a bottle close corked, without any sort of food, unless a small quantity of sand, wherein they coiled themselves up in the bottom of the vessel may be reckoned as such; yet, when he saw them, they had newly cast their skins, and were as brisk and lively as if just taken. But it is even natural for divers species to pass four, five, or six months every year without eating or drinking. Accordingly, the tortoise, bear, dormouse, serpent, &c., are observed regularly to retire at those seasons to their respective cells, and hide themselves, some in the corners of rocks or ruins; others dig holes under ground; others get into woods, and lay themselves up in the clefts of trees; others bury themselves under water, &c. And these animals are found as fat and fleshy after some months as before.

I recollect, at New York, seeing a tortoise weighed, several years successively, at its going to earth in October, and coming out again in March, and it was found that, of four pounds four ounces, it used only to lose one ounce. Indeed, we have instances of men passing several months as strictly absent as other creatures. In particular, the records of the Tower mention a Scotchman imprisoned for felony, and strictly watched in that fortress for six weeks, in all which time he took not the least sustenance, for which he had his pardon.

It is to be added, that in most instances of extraordinary human abstinence related by naturalists, there were said to have been apparent marks of a texture of blood and humours much like that of the animals above-mentioned. Though it is an improbable opinion that the air itself may furnish something for nutrition, it is certain there are substances of all kinds, animal, vegetable, &c., floating on the atmosphere, which must be continually taken in by respiration. And that an animal body may be nourished thereby is evident in the instance of vipers, which, if taken when first brought forth, and kept from everything but air, will yet grow very considerably in a few days. So the eggs of lizards are observed to increase in bulk, after they are produced, though there be nothing to furnish the increment but air alone; in like manner the eggs and spawn of fishes grow, and are nourished with the water. And hence, say some, it is that cocks, turn-spit dogs, &c., though they eat but little, are usually fat.

## A TEXAS SETTLER AND SUBSCRIBER.

Galveston, November 20th, 1845.

## SAGACITY OF A SHEPHERD'S DOG.

SIR,—Of the sagacity of dogs many instances might be adduced; but none that I have ever met with, can equal the following instance of the sagacity of a shepherd's dog, as related to me the other day, by an old farmer of Hertford's Inn, and which fact among others respecting the dog was authenticated by evidence on the trial of the owner some years ago, who was hanged for sheepstealing. When the man intended to steal any sheep, he did not do it himself, but detached his dog to perform the business. With this view, under pretence of looking at the sheep, with an intention to purchase them, he went through the flock with his dog at his feet, to whom he secretly gave a signal, so as to let him know the individuals he wanted, to the number of, perhaps, ten or twelve out of a flock of some hundreds; he then went away, and from a distance of several miles, sent back the dog by himself in the night time, who picked out the individual sheep that had been pointed out to him, and drove them before him by himself, for the distance of ten or twelve miles, till he came up with his master to whom he delivered his charge.

Yours,

PHILO CANIS.

Hampton Court.

NEW KIND OF GAME.—Not many days ago Major General Wyndham's gamekeeper caught an old carrion crow in a trap, which he took home, skinned it, and threw the carcass out. A female who lives near to the gamekeeper's house gathered up the carcass of the crow, under the impression that it was the remains of a pheasant, took it home, and roasted it for dinner. On seeing the gamekeeper passing by the house in the course of the afternoon the woman inquired of him if pheasants were not very dry birds, stating at the same time that she had found one ready skinned, and had roasted it for dinner, but that it had taken more fat and butter than it was worth.

## BRITISH BIRDS.—NO. XXIV.

THE TEAL.

**T**HIS, the twenty fourth of our illustrations of British Birds, is so intimately connected with the article on the Decoy, in the last number, and of coast gunning and punting begun in the present, that its picture could not fall more *apropos*. This beautiful little duck seldom exceeds eleven ounces in weight, or measures more, stretched out, than fourteen inches and half in length, and twenty-three and a half in breadth.

The bill is a dark lead colour, tipped with black; irides pale hazel; a glossy bottle green patch, edged on the upper side with pale brown, and beneath with cream coloured white, covers each eye, and extends to the nape of the neck: the rest of the head, and the upper part of the neck, are of a deep reddish chesnut, darkest on the forehead, and freckled on the chin and about the eyes with cream coloured spots; the hinder part of the neck, the shoulders, part of the scapulars, sides under the wings, and lower belly, towards the vent, are elegantly pencilled with black, ash-brown, and white transverse waved lines; the breast greatly resembling the beautifully spotted appearance of an India shell, is of a pale brown or reddish yellow, and each feather is tipped with a roundish heart-shaped black spot: the belly is a cream coloured white: black and rump brown, each feather edged with a pale colour: vent black: the primary quills, lesser and greater coverts, are brown; the last deeply tipped with white, which forms a bar across the wings; the first six of the secondary quills are of a fine velvet black; those next to them, towards the scapulars, are of a most resplendent glossy green, and both are tipped with white, forming the divided black and green bar or beauty spot of the wings.

The tail consists of fourteen feathers, of a hoary brown colour; with pale edges: the legs and feet are of a dirty lead colour. The female, which is less than the male, is prettily freckled about the head and neck with brown and white. She has not the green patch behind the eyes, but a brown streak there, which extends itself to the nape of the neck; the crown of the head is dark brown; the upper mandible yellow on the edges, olive green on the sides, and olive brown on the ridge; nail black, and the under bill yellow; breast, belly, and vent glossy yellowish white, spotted on the latter parts with brown; the upper plumage is dark brown, each feather bordered with rusty brown, and edged with grey: the wings and legs nearly the same as those of the male.

The teal is common in England in the winter months, but it is uncertain whether or not they remain throughout the year to breed, as is the case in France. The female makes a large nest, composed of soft dried grasses, (and is said, the pith of rushes) lined with feathers, cunningly concealed in a hole among the roots of reeds and bulrushes near the edge of the water, and some assert that it rests on the surface of the water, so as to rise and fall with it. The eggs are of the size of those of a pigeon, six or seven in number, and of a dull white colour, marked with small brownish spots; but it appears that they sometimes lay ten or twelve eggs, for Buffon remarks that number of young ones are seen in clusters on the pools, feeding on cress, wild chervil, &c., and no doubt, as they grow up, they feed, like other ducks, on the various seeds, grasses, and water plants, as well as upon the smaller animated beings with which all stagnant waters are so abundantly stored. The teal is highly esteemed for the excellent flavour of its flesh: it is known to breed, and remain throughout the year in various temperate climates of the world, and is met with as far northward as Iceland in the summer.

**SHOOTING TEAL.**—Of all the prizes that a wild fowl shooter could wish to meet with, a flock of teal is the very first. Independently of their being by far the best of birds of the whole *anas* tribe, they are so much easier of access, and require such a slight blow, that no matter whether you are

prepared for wild fowl, partridges, or snipes, you may at most times with very little trouble contrive to get near them and this being once done, you have only to shoot straight to be pretty sure of killing.

I have seen teal "duck the flash," though never but once, and then I had rather a slow shooting gun.

If you spring a teal, he will not soar up and leave the country like a wild duck, but most probably keep along the brook, like a sharp flying woodcock, and then drop suddenly down; but you must keep your eye on the place, as he is very apt to get up again and fly to another before he will quietly settle. He will frequently, too, swim down the stream the moment after he drops, so that if you do not quickly cast your eye that way, instead of continuing to look for him in one spot, he will probably catch sight of you and fly up, while your attention is directed to the wrong place. If the brook in which you find him is obscured by many trees, you had better direct your follower to make a large circle, and get a head of, and watch him, in case he should slyly skim away down the brook, and by this means escape from you altogether. You should avoid firing at random, as this may drive him quite away from your beat.

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 499.)

At NEWPORT, Aug. 5, a filly by Safeguard won the Stakes, beating T'Auld Squire and several others. The Stand Plate was won by Rhine. At BANBURY, Fama won the Stakes, beating two of J. Day's and some others. The Queen of the Gipsies won the Neithrop Stakes.

My Old Hack won the Willoughby Stakes, at HORWICH, Aug. 6, beating Bedale, by Inheritor, after a beautiful race; and the Cup, after a severe contest, fell to Sir C. Monck, his Glossy beating Xanthus by a head; Millepede, third. A clumsy affair for the Ladies' Plate, ended in Catton being placed first, not without disputes and protest. The Standish Cup, 50 guineas, 10 each added, was won by Coranna easily; Sir Henry and Susan tried hard for second, but the horse beat her. The Champion Stakes were won by Mr. Standish's filly, beating Box and Sir Henry. Glossy won the Bolton Handicap Stakes, beating Erebus, Xanthus (the favourite), and several others.

The Races at BRIGHTON were very badly attended, and the weather unpropitious. A delightful place, those Downs, on a fine day; but with a strong southwester driving the rain through to the skin, I cannot say—content. Tug-Net walked over, for want of a competitor, though one or two named would have beaten him to a certainty, had they started. Pine-apple won the Stakes, beating Jenny Wren and some others; yet some of our friends fancied Jenny Wren for the Cambridgeshire. She carried here 5st 9lb. Alkali, (formerly known as Colonel Peel's Seakale filly,) now Mr. Shelley's, beat Best Bower, Fickle Wild Rose, and Karnac for the Town Plate. Tit-bit beat Ferney and Trebonius, all two years old, for a Sweepstakes of 25 sovs. each, 6 subs. Lothario won the 100 guineas. Karnac, (priced at 100*l.*) beat Antonio, Alkali (200*l.*), and several others for the Railway Plate. The Duke of Richmond's colt by Mus, out of Belvidere, won a 50*l.* and was claimed for 80*l.*

At ABERYSTWTH, Aug. 6, Ninety-one carried off the Cup, The Town Plate, the Members' Plate, and the Cardiganshire Stakes. Waterloo won two races, and Jack Cade one. Mr. Parr's Minna Troil won the Johnny Raw Stakes.

At MARLOW, Aug. 6, Stittenham beat Lady Flora for the Ladies Plate, and Lady Flora had her revenge of him for the Quarry Stakes. Miss Robinson won the Ring Stakes.

At WOLVERHAMPTON, Aug. 11, five started for the Produce Stakes, which were won by Carissima, beating Gwalior, Princess Royal, and two others. In the race for the Wolverhampton Stakes, Glossy seems to have had the race in hand from the start, Yardley was second, and Nixmy-Dolly, well in, third; Intrepid a bad fourth, and the Poor Soldier and another or two beaten off. A filly by Jered, dam by Bustard, carrying even weight with General Nott, beat him by eight lengths. Coranna, 3st. extra, and Queen of the Gipsies, the same, were in the race. The distance toe (mile and a half) suited the young uns. A very important race among two years old next came off. For the Chillington Stakes, then, seven started, all of whom are mentioned in my description of the race. It will be recollected this is a half-mile race. They were very fractious, but at the fifth attempt got away, Cherokee in front, with Breastgirth and Lord Harry next. At the distance Twig went up, passed the three, and won easily. Cherokee second; the colt by Stockport, out of Manilla, got third place. The rest, including Breastgirth, Lord Harry, colt by Don John, out of Game Lass, and Birthday, behind. The ancient Shadow beat Coranna, Cœur de Lion, and two others, over three miles, for the Cleveland Cup. Surety, carrying a stone less, beat Fama and Millepede for the Boro' Members Plate. The Jered filly, mentioned above, won the Holyoake Stakes against a fair field, cleverly; Arthur was second. For the Consolation Plate, Gwalior showed himself the best of the beaten horses, beating, among others, T'Auld Squire and My Old Hack.

At the HATCHAM PARK, Aug. 11, Lady Flora beat Stittenham and Elysium. Lady Flora won another race. Tub-thumper one, and Freystrop one. Fair Play won the Hurdle Race.

At the PLYMOUTH, DEVONPORT, AND CORNWALL RACES, a filly Wild Rose by Vension, won the Saltram Stakes, 6st 7lbs, but lost the United Service Plate, won by Norma Creina, by Nonsense, for which she carried 7st 5lb. Giantess beat Europe for the Queen's Vase. Europe lost another race here. A mare, called Fee, by Physician, won the Devonport Plate, beating some unknown ones.

At CHELMSFORD, Lord Exeter won a Sweepstakes with Topaz, and the Town Plate with Timbria. Miss Robinson won the Queen's Plate.

At LEWES, Aug. 13, Pine Apple and Naworth, giving about 1st, were beaten by Red Deer for the Queen's 100 guineas.

At READING, Aug. 13, (a place where races have been resuscitated after a lapse of many years,) there is not yet anything like good sport. Devil-among-the-Tailors has been a regular frequenter, and has, as yet, very easily carried off the Stakes. For the Reading Stakes, Camelia beat Ferny, both 2-years-old, Corinthian Tom 3-years-old, and the Bard, two. The Devil-among-the-Tailors won the Berkshire Stakes, a pretty good purse. Palemon won two races. Stittenham and Elomi did no good. Carillon won the Calcut Stakes, and Flatfish the Balmershe Court. The Devil-among-the-Tailors won the Ladies Plate.

At RIFON, Aug. 18, the races opened with the Two-years-old Stakes: a race, though not very important, still of some interest. Seven started, and their names can be collected from what follows. Fitzwilliam made the running, with a slight lead, nearly to the chair, where brother to Sir Henry made a rush, and it was announced "a dead heat." Driffield was third. Hydra-colt, Hovingham, Golden Bee, and Lady Abness not placed. Fitzwilliam and brother to Sir Henry in the deciding heat, made a good race for the first place, and the former won by a neck, Lord Saloon won the G. St. Leger Handicap, beating sister to Pedometer. Milpede won the City Stake. In this race Aristotle, once in high favour, uncumbed to the weight of years and work and was withdrawn; he fell lame in the first heat.

At HOVLAKB, Aug. 19, Xanthus beat T'Auld Squire, for the Birkenhead Handicap. T'Auld Squire went in again for the Royal Hunt Cup, and won. A gentleman in these parts fancied to name his mare "Do-it-again," which turned out a misnomer, for it was not her luck to "do it" at all.

At MARLBOROUGH, Aug. 19, as at Reading, the usual lot of travelling second-rate animals were found collected. Their deeds need not much remark. The said Norma Creina (not Nora Creina) won two races. Lady Flora won one race, as did Freystrop and Stittenham. Venatrix won the Savernake Forest Stakes.

The YORK AUGUST (Aug. 20) opened with a walk over by Sweetmeat. The Libel paid forfeit to Inheritress. Mid Lothian beat June, by Stockport, for a 30 sovs. Sweepstakes, after a good race over a mile and a quarter, by a head. Dean Swift (4st 10lb) beat Inheritress, 8st 1lb, Chizelli, 4st 7lb, Pagan, Winesour, Valerian, and Advice. Spur walked over, only three subs., for the Colt Sapling. Cohedress won the Great Ebor Handicap, beating sixteen others; Flattery was fancied at 4 to 1, being "well in," but was out of the race after the first mile. Lydia beat Marian Ramsay for the Filly Stakes. The Shadow won the Queen's Plate, beating several others, including Sailor (mem., in the last number you misprinted this horse Jailer). For the Convivial Stakes, two years old, "Andrew Brandy" changed his name, brought himself more into "Alliance" with the temperance movement, and got up stairs before "Sich-a-getting-up-Stairs," by several lengths, which might have been many more; your readers will have heard, perhaps, the latter is by Hetman Platoff! Philip won the Chesterfield Handicap, beating Godfrey, Semiseria, and Croton Oil. The next race was one your readers will do well to bear in mind. For the Prince of Wales's STAKES (two years old colts and fillies), Malcolm was first; the colt by Stockport out of Manilla, (mentioned before), second, and Sheraton third; these three were placed, and as the others were two, three, four, and five lengths behind, it is hardly necessary to say more than that the Slayer's Daughter, colt by Phoenix dam by Tomboy, Inglewood, and Luminary, came in as Curiesy are named; the others in the race were Cranebrook, Tobaccoconist, Curiosity, Billy Purvis, Banana, Josephine, and Mr. Osbaldeston's Stockport filly. Malcolm took up the running at an early part of the race, and won easily; the second beat the third by a neck. For the County Cup, Mid Lothian beat Flattery and several others. In this race the notorious Zanozi, alias Running Rein, alias Maccabeus, received his quietus, falling lame, and not even passing the post. Mr. Osbaldeston's filly walked over for the Filly Sapling, 3 subs. Spur paid forfeit to Malt. Malt beat Benevolence. For the Consolation Stakes, the Cossack Maid, two years old, 4st 11lb, beat Twig, three years old, 7st, and some others. This is not Mr. Peel's Twig, named for the Derby, but Lord Chesterfield's: the ages, however, tell it is not the same. A capital race then ensued between Sweetmeat and Inheritress over a mile and a half; the mare carried 8st 7lb, the horse 7st 7lb. Nat rode Sweetmeat, and Templeman, Inheritress. The horse won on the post by "a head"! The ease with which Miss Sarah won the Great Yorkshire Stakes I need not enlarge on; there cannot be a doubt her winning is to be attributed to the excellence of her training and the heavy ground.

The Shadow won the Members' Plate; and there being no competitor the Helmsman walked over for the 100 sovs. Sweepstakes. In number, thirty-one, your printer has printed "himself" for "herself."

Science is a filly, and so appears in your Almanac. In number thirty-two, it would appear I had said Iago is disqualified, I intended to say "Morocco;" Iago is in very great favour, and likely to be so.

### NOTICE!

THE PROPRIETORS, in consequence of the unexpected demand, have found themselves under the necessity of reprinting THE ALMANACK and with it NUMBER 28 of THE MAGAZINE which they will still continue to keep on sale for a few weeks, at the price of THREEPENCE together.

N. B.—This is done in order to keep faith with many Subscribers, who have failed in procuring their numbers owing to the increased demand. The Almanack may also be had, strained on linen, varnished, and with neat roller, for suspending in Parlours, &c. Price 2s. 6d. each.

\* \* \* The Stamped Edition of the SPORTSMAN'S MAGAZINE, can be had post-free direct from the Office or through any News agent for 3s. 3d. per quarter, PAID IN ADVANCE. We insert this notice in consequence of numerous enquiries as to the mode of obtaining the Stamped edition. Observe, a single copy can always be had, but it must be ordered on the Tuesday at latest to make sure of supply, as we print no stock of stamps.

### CORRESPONDENTS.

W. M. Stoke Newington.—Yes, if you discharged your gun within a certain distance of a turnpike road. Sunday morning shooting (if the police choose to be officious) will also bring the practiser within a penalty (upon summons) before a justice of the peace. Numbers 5 and 6 of the SPORTSMAN'S MAGAZINE are not out of print. If any newsman in Islington tells you so, the truth is not in him. Send us his name, we have had a dozen such complaints from subscribers; we suspect that certain wholesale dealers, from TRADE motives, check our sale: the remedy for this will be for our subscribers to be determined on getting the publication. The newsdealer will perhaps tell W. M. who is his authority for saying so; send us his name, and we will print shortly in legible type, a list of those agents who WILL NOT sell our MAGAZINE, with some comments that will do them good.

SANCTI LORE.—The pronunciation of Pacha, (the name of Mr. Painter's horse in the late Leges) is Pash-a; this word, signifying a Turkish governor, was, by our older writers, spelt Bahaw, and substituting the P for the B, the broad aw is still used by some persons of taste and education.

S. B.—Tom Smith (the East End Sailor) beat Brittain, Dec. 21, 1830; and McCarthy in March 1831.—R., has therefore lost, as neither fight took place within a dozen years of the present time.

J. K. S. Manchester.—Dick Davis, of Manchester, weighed 10st 8lb, when he fought Young Dutch Sam: we take that to have been his fighting weight, or thereabout. He beat Roger Holt, Jack Wilson, Jem Whittam (twice), and Fiddler Hall; made a draw with Tom Reynolds, and was beaten by Dogherty and Young Dutch Sam. He was a game man, but too slow and too fond of a favourite hit, to contend with success against the activity, skill, neatness, and straight hitting of the deceased "Young Thunderson." To your second question: It was in their second fight that Ned Painter was victor over Spring.

H. CREAM.—We have really taken some pains to procure you a prospectus of the NEW ASSASSINATOR SCHOOL, but none of our acquaintance know anything about such a document. Mr. Smith, of Liverpool, or the agent who supplies you with this paper, will procure you the little handbooks of Boxing, Wrestling, &c. published by Clark, of Warwick Lane.—GURUS GARDNER, by Chifney, has been above a quarter of a century out of print, as also Captain Barclay's "Observations" on training. They can therefore only be picked up by chance; and are not procurable of any publisher in regular course of trade.

R. M. M., South Lambeth.—It is from the Office of Commissioners of Woods and Forests that the permission proceeds; the Earl of Lincoln is Chief Commissioner. A public notification was inserted in the London Newspapers in July or August last, stating that the permissions granted were so numerous that no more applications would be entertained. You are in over-good time at such a season as this in making your application; wait awhile and address your letter in February or March, if you get no answer before. Salmon spawn is a good general killing bait; but there other inferior and more easily procured ones, which do as well for the commoner sorts of fish.

SWAP.—We will gladly avail ourselves of your suggestion when the Angling Season comes round.

PHILOCAVIA.—Both the hot and cold bath may be applied with advantage to the dog as well as to man. In using the warm bath, however, be sure to remember that a dog cannot bear, without suffering, a degree of heat which is no more than comfortable to the human hand. From 100 to 110 degrees of Fahrenheit is the highest that should be resorted to, and that only in violent rheumatism and acute cases, 96 to 98 is sufficient in most others. In large towns where dog-grass cannot be had easily, give a teaspoonful of common salt, as an emetic. Tartar emetic, in doses of one up to three grains, is, however, much better.

S. G., Rugeley.—Another Dog Correspondent.—Sulphur is of no use whatever in the roll state; a lump of it will, placed in water, be of no more service than a piece of brick of the same size. We will wager that a knob of it does not lose ten grains in as many months, exposed to the simple action of standing water. In powder (i.e., flour of brimstone) it is an excellent remedy for piles, mange, and canker, when in combination with cooling alteratives.

POOL.—R. J.—Four play—the game to play upon the last player. No. 1 plays, 2 plays upon 1, 3 plays upon 2, and in so doing brings his own ball into baulk. No. 4 is in hand, can be played upon No. 3, or is the baulk a protection?—The baulk is no protection.

ALL-FOURS.—JAMES FINCH.—C is entitled to the one for game.

JUDEx.—The jack being high, J. P. wins the game.

LEICESTER.—When they count alike for game, the non-dealer scores one for it.

PEDERSTRAN, Nottingham.—The man who stopped half-way has lost the race. The quibble is absurd; as, providing the men started fair, he who first reaches the goal in a foot-race is the winner. He may hop on one leg, or walk in on his hands, if he pleases, for either of these performances would be giving a chance to his adversary.

**NORRIS.**—Does your mother know you're out? We doubt it. Inform yourself on the subject before you give either your opinion or your advice. Even when good, Byron has declared "small thanks is still its market price;" what then is its value when the adviser knows less than nothing of the subject whereon he undertakes to do the *sage* (without the onions to his sauce), while the party he advises has had extensive, practical, *purchased* experience in the matter?

**A WANDERER.**—Thanks; the hint is a pregnant one; we will conceive and bring forth in form to go alone in some *sixty* days; can we *wait*? as the canny Scot would say, and mean no pun.

**AN OLD'UN.**—The execution of the two men, Haggarty and Holloway, for the murder of Mr. Steele, took place on the 28th of February, 1807. The false alarm of fire at Sadler's Wells on the 7th September following.

**S. LUNLEY, Oldham.**—Whist.—A and B against C and D. Two tricks have been played and turned, when C, previous to leading for the third, claims to look at both tricks. Can he do so?—No, only the last turned.

**A LEICESTER COVE.**—The celebrated Jack Mytton died in 1834, on the last day of March. He has therefore been more than ten years dead.

**B. C.**—Newport Pagnell Sweeps: A landlord receiving subscriptions for one race has no right to substitute a draw for another without the consent of all parties, and must return the subscriptions.

**LIBEL.**—Nimrod died in 1843.

#### OUR WEEKLY CALENDAR.

**SUNDAY, DEC. 28th.**—FIRST SUNDAY AFTER CHRISTMAS.—Innocents' Day—most of the pretty little dears martyrs to plum-pudding, mince-pie, Epsom salts, calomel, and brimstone and treacle.

**MONDAY, 29th.**—The pursuit of the fox may be now enjoyed in perfection; the fox, the hounds, and the horses having by exercise, obtained good wind and good running condition altogether. Hares which by previous over-feeding were rendered somewhat sluggish will now stand up well before their pursuers, and afford as good runs, if not better, than at any other period of the season.—*Angling.*—Use the same baits as last month. In favourable weather, pike, roach, and chub, may sometimes be taken; but all other fish have retired to their winter retreats, to screen themselves till the voice of Spring again re-animates, and calls them forth to their old haunts.

**TUESDAY, 30th.**—A number of birds, mostly aquatic, and chiefly of a large size, such as the wild swan and laughing geese, pay us a brief visit.—Our old friend robin is musical in all weathers; the little wren sings amongst the snow; and birds of the finch tribe creep near our dwellings for shelter and food, all tending to enliven the cheerless scene.—Baptist Chapoi at Stafford broken into. The "plate" being pester the thieves leave it behind them—the thieves too genteel take a pull out of "petewer."

**WEDNESDAY, 31st.**—Ezrl, Eighteen hundred and forty-five.

**THURSDAY, JAN. 1, 1846.**—Enter, Eighteen hundred and forty-six.—

Come New Year, and bring with thee,  
Joy to sons of Venerie—  
Men who love that joyous sound,  
The challenge of the eager hound,  
When the wily fox is found—  
Men who shout the wild halloo  
When the flying fox they view—  
Men who love the merry lass—  
Men who circulate the glass—  
Men who love "the manly fight,"  
And scorn the base assassin's spite;  
Who boast the "art, without pretence,"  
The English art of "self-defence;"  
All true sportsmen bring with thee,  
Wrapt in the garb of gaiety,  
Cast behind thee sin and sorrow,  
Give us joy to-day, to-morrow;  
Give us life's choice merriment,  
A foremost start, and blazing scent,  
Banish frost and banish snow,  
Give us horses that can go,  
And while our nags are first in blood,  
And men alike are staunch and good,  
Our dogs first-rate in strength and speed,  
Our soldiers, sailors, brave at need,  
Come weal, come woe, or war's alarms,  
Old England dreads not worlds in arms.

Union of Ireland passed 1801.—Dan threatened to repale it before the close of 1843.

**FRIDAY, 2nd.**—In-door Amusements.—January is one of the most festive months of the year. Its calendarial festivities are New Year's Day and Twelfth Day. Although the custom of presenting New Year's gifts is now but little observed by many a mirthful party.

**SATURDAY, 2nd.**—January presents many amusements to sportsmen. Stag and fox-hunting are in the ascendant; and coursing, if not frosty, is in full spirit: while partridges, woodcocks, snipe, and pheasants, are all fair game for those who can handle a fowling piece. If the weather be "fair and frosty," the lover of out-door exercises may indulge in the healthful and exhilarating amusement of skating.

## The Sportsman's Magazine.

#### THE NEW YEAR.

Another and another still succeeds.—SHAKESPEARE.

Reckon not ourselves among those groaning canthers, who mourn over the year's decay, and become lack-a-daisical and maudlin because the leaf falls; to us the eternal revolution of seasons, the spring, the maturity and the decay seem all equally necessary, all equally beautiful. Neither do we take it to heart because "day buries day,

month month, and year the years;" or, that time and tide wait for no man. If we can glance back upon the past without shame, and look forward to the future without apprehension, we care little that we are grown older, or that we are called upon to feel that another Christmas has passed away, and another new year arrived. "Sufficient for the day is its evil," and they are of the wretchedest who anticipate lamentation.

Speaking of our own vocation then, as having embarked time (which is money), cash, and credit in the SPORTSMAN'S MAGAZINE, we can conscientiously say that it rejoices us that we can welcome the birth-day of 1846, inasmuch as we hope that the older we get, the stronger we become; and that if, in a legislative point of view, it can be said that the "King never dies," why, change our ministry as we may, shall we not also affirm that an editor living in his work may at least hope to fulfil the wish of the Spaniard, and "live a thousand years?" Honest readers, kind contributors, staunch sportsmen, we are quite sure it will not be your fault if we do not; and hence it evidently becomes us, in common gratitude, as it is to us a pleasure, to greet you, each and all, upon the arrival of another New-year's-day—the starting-place of another twelvemonth's race for fame, for fortune, for existence. This is the

"happy holiday,

When gifts and gratulations go about  
So closely heart-linked, that we well may deem,  
Of those so happy triumphs ere guilt was,  
The time is come again;"

and so ought we to deem it: so ought we, on this day, to teach our hearts to rejoice over national prosperity and individual happiness; over hopes undeferred and prayers accomplished; over our friends' success and our neighbour's fortune; for the peace of the cottage and the pride of the palace; at the glory of the monarch and the attachment of the people. At all these we ought to exult.

Yet, yet, no sorrows in these thoughts we bear.

No grief to dim the sunshine of our life;  
Our sports are honest, healthful, void of care,  
Poisons to envy, and the foes to strife.  
Then let years come and go, we shall not fall  
The sooner, that we dare the gallant chase;  
Nor the cold sheet, nor dim funeral pall,  
The quicker clasp us that we like the race:  
Again, then, hail we, sportsmen, the New Year,  
Nor slack our pace that January's here.

So, too, in our own more particular occupations, brethren sportsmen, it gladdens us to commence our weekly epitome of field sports anew, and to feel that their glory abroad and their interest at home are not decayed,—are still triumphant; that you are still willing to listen, we to speak of that which most delights us, that which giveth health to the body and elasticity to the mind. May it never be said that thus to proceed is to "prattle out of season." Long, long be it our gratification to endeavour to deserve success; long, very long let it be your pleasure to say we may command it.

With alacrity, therefore, we buckle ourselves to our task of illustrating the noble field-sports of England; and, as we are of the same tastes and fancies, so let there be but one heart and mind amongst us; acting thus, to quote a popular writer, "it will be a consolation to feel that, during the progress of eighteen hundred and forty-three, we have endeavoured to lighten care of some of its frowns, grief of some of its tears, contributed somewhat to the information of the young, as often as we could to the comforts of the old, and that we begin this cheerful occupation upon New Year's Day."

**IMPROVEMENTS IN BRIBERY.**—A new kind of bribery has lately sprung up. The "apples with the silver pips" have been discontinued by the omnibus conductors, since trading in them was exposed in our pages. The bribe is now offered in a snuff-box. The conductor, who has tarried at the omnibus-station longer than he is allowed by an act of Parliament, calls out to the vigilant guardian of the peace, "I say, policeman, have a pinch of snuff?" Z 33 accept the offer, and finds amongst the rappee a sixpence, which his instinct tells him is not to be sneezed at, and so it is applied to his pocket, instead of his nose. A sixpenny pinch will secure the owner of the snuff-box an indulgence of five minutes, whilst a shilling ditto will so far obscure the vision of the wide-awake policeman, as to make him blind to the stationary omnibus for the next quarter of an hour. The snuff is known amongst the cads, as the "Policeman's Mixture."

*Inscription for the collar of a young Lady's lap Dog.*

Is it not strange that such a thing as this is,  
Should steal from blooming Fanny balmey kisses?  
That such a little limping cur should sip?  
The native nectar of her luscious lip?  
While many a sprightly, many a pensive swain  
Must sigh whole years for one dear kiss in vain?  
Alas! what head that woman's heart can scan,  
Who gives to Dogs the bliss great nature meant for MAN.

December, 1845.

HIGH-HOI

## COAST-GUNNING AND PUNTING.

WHEN the rigidities of the northern pole are in full sweep; when the towering ice-burys display their snow-clad tops; when the surface of the ocean, arrested even in its mountainous turbulence, becomes a frozen world; and the leviathan and the whale no longer are the terror, nor of benefit to man, then our most blessed genial climes are the resort of the feathered race, compelled by overwhelming nature to seek for food and life in other spheres—receiving, with the imperative necessity an unerring instinct that directs them where softer breezes prevail, and where the fluxes and refluxes of the sea continue in undisturbed regularity.

It would be endless to enumerate the varieties of this migration. In few words, however, it may be said to embrace every species of sea-fowl, from the majestic swan to the diminutive teal; for it is well known to all naturalists that the Arctic regions are the natural climate for their generation. The most numerous class of visitors from those shores is the black or Brent goose, which constitutes the principal object of the punters. They appear in such immense flocks on the coasts of Norfolk and Essex as to darken the atmosphere, and are observable in a combined line of flight apparently without end. As the tide flows, they gradually boom from the horizon; and when it recedes, you begin to see separating gaps in the figure, and can easily trace various parties or detachments directing their course to different quarters of the oozy coast. These movements are closely observed by the looker out; and, according to circumstances, prepare for their nightly occupation; preferring that to the day, although they are ready for any opportunity; they are always in great masses; create an immense disturbance when they pitch; and when they fly again, raise a scream, which with the noise of the rising wings you may hear ten miles off in a still night.

"Bright star-light," says Colonel Hawker, "is the very best of all times for getting at birds, as the tide flows over the mud; particularly if there be not too strong a breeze to blacken the water. Widgeon are easier approached in moonlight than in hazy weather. In white frosts widgeon are often restless; in rain they are constantly flying and pitching; in very dark weather they are suspicious; but if the wind blows fresh enough to drown the noise of a launching punt, some heavy shots may now and then be made, by sweeping the surface of the mud to the sound of where the flock is walking and feeding—a leading feature of attention in an observing gunner. The thicker the weather, the more silent when pitched. A shrill clear pipe denotes a single cock widgeon, as does a long loud 'purrr' a hen; but when the call of the cock is one short soft note, and not so often repeated, you may expect to find a company. If so, you will probably soon hear the birds 'all in a charm,' (that is in full concert)—here requires patience, and a quick ear. When the 'charm' is in full force, they are not minding you; but when silence reigns, and you are sure of a flock, they are suspecting an enemy. At this moment you must keep still, till they open again, and then in starlight you generally get near enough for a large gun to give them a royal salute."

Shore-shooting offers, perhaps, superior sport for those who are partial to this species of diversion. The coast of Hampshire and the Isle of Wight is peculiar, consisting, at ebb-tides, of vast muddy flats, covered with green sea-weed; and they afford the fowler an opportunity of practising arts which are not resorted to elsewhere. Sea-fowl generally feed by night, when, in vast numbers, they visit these flats. Their approach is accompanied by a noise, directing the attentive fowler to their course; and when they have alighted, he edges his boat as near to them as possible, frequently favoured, in his approach, by the winding of some creek. The sportsman is generally prepared with two guns, one of which he directs towards the place where they are feeding, and fires at a venture, and instantly catching up the other gun, discharges it as the flock rises on the wing. Mud pattens (a figure of which is given below) are employed for the purpose of traversing the shore and picking up the game. This amusement is attended with considerable danger, as the sportsman is liable, without great care, to be fixed in the mud, and thus becomes an inevitable prey to the returning tide.

The danger of following wild-fowl in small craft is much increased when there is ice in the rivers, which sometimes encircles the boats, generally ill calculated to sustain pressure against their sides. Those, therefore, who follow this diversion, drop down by night with the tide, taking the advantage of the wind, moon, &c. Guns of an immense size are used, which carry as large a load as a small cannon, and these are laid with the muzzle over the stern of the boat, in a hitch, which regulates the line of aim: the sportsman lies at the bottom of the boat on his belly, and gets as near the game, that are upon the water, as possible: when within range, he rattles with his feet against the bottom of the boat, and just at the moment when the birds spring, he pulls the trigger, and cuts a lane through their ranks.

The best time for wild-fowl shooting in rivers is the first or second day's thaw after a severe frost, and when deep snow has long covered the ground; the fowl are then flying in every direction to dabble in the fresh water, which, at such periods, seems very inviting to them. Another favourable opportunity is at the commencement of a frost, with the wind

strong at east, and sleet or snow falling: the birds are more easy of approach in such weather, and always fly lower than when the atmosphere is clear.

As far as relates to what may be considered as the real amusement or diversion of wild-fowl shooting, there is, perhaps, no part of Great Britain where it can be enjoyed in greater perfection than in the Highlands of Scotland. Great numbers of birds breed on such of the lakes in these parts as are fringed with cover, or where there happens to be small spots or islands in the midst of them; and in winter these places are visited by winged emigrants from other countries, particularly those lakes which have a communication with the sea. The rocky shores, too, contain immense number of wild-fowl at almost any period of the year, and there likewise rock-pigeons are found in abundance.

In the severity of a hard winter, wild-fowl shooting will afford diversion of a secondary order, or enliven a dull season when superior field-sports are not to be obtained; when, in fact, from the state of the weather, the pursuit of the fox and the hare are out of the question; and when, indeed, the pursuit of the partridge, &c. may be considered, at least, very unseasonable, and, frequently, abortive: in a hard frost, pointers cannot range, nor greyhounds course, nor hounds hunt; the state of the ground being such as very soon to cut their feet to pieces.

Thus much of wildfowl-shooting in the general, and now of gunning on our English shores in particular.

Different men have different opinions  
Some likes happles, some likes hinguas,

sings some great poet somewhere, and thus is it with sporting. We have already had occasion to quote the veteran Colonel Peter Hawker, as who must not when speaking of coast-gunning? His name and that cold, hardy, patient, and daring diversion are inseparable. To that gentleman's work, therefore, as the text book of shore-shooting, we shall not scruple to resort for a few illustrative designs to render more clear and intelligible the perilous occupation of those who thus live by "the banks of the great waters," and those adventurous sportsmen who venture to scare the whirring tribes for healthful recreation and pastime.

"The amusement of wildfowl shooting" says Col. Hawker, "is generally condemned, as only an employment for fishermen, because it sometimes interferes with ease and comfort; and bucks (who shoot, as they hunt, merely for the sake of aping the Adonis at breakfast, or recounting their sport over the bottle) shiver at the idea of being posted, for hours, by the side of a river, or anchored, half a night, among the chilling winds in a creek.

This, however, is only the actual service of the sport, as it may, like all others, be enjoyed with moderation.

The usual way of sallying forth, for this purpose, is to drive to an inn on the coast, call the waiter, who recommends an honest boatman, for whom the boots is immediately dispatched. On his arrival, he sees how eager you are to set sail, fixes his price accordingly, shows you thousands of birds, that he knows a boat can never get at, obliges you with a few of his own killing, at double their value, and your day ends with a ten pound bill, and, perhaps, bagging a couple of seagulls.

It is well known, that the generality of wildfowl fly most in the dusk of the evening; and, that no plan then answers so well, as to wait patiently for them, and fire as they pass to and fro. They will, at this time, seldom take notice of one, who stands against a bush or bank, provided he remains perfectly still, and is not conspicuously dressed. Nothing sooner shies fowl than a black hat; or is better and more durable than the seal's down cap, which was originally invented by Messrs Bicknell and Moore. If such places are not to be found, an ambush may be easily made. Thus situated, he will be able to distinguish the different sorts of fowl, long before they come within shot, and be struck with the wild retirement of the scene. He will observe the whistle, which announces the approach of widgeon—the similitude to a storm of the rapid flying dun-birds—the shrill sounding pinions of the wild-ducks—and the mournful notes of the plover, with the roar of a bursting surge, and discordant screams of sea-fowl.

Going to flight (as is provincially called this pursuit) is always followed with most success in very windy weather, when the birds are obliged to fly low; and you may then keep two guns employed faster than yourself and a servant can load them.

Should the weather be clear, and the birds come in high, your best means for getting a good chance is to conceal yourself in a canoe, between the banks of some small creek, as they will lower their flight on reaching the mud, and in all probability give you as many fair shots as you can fire during their arrival; which may continue about half an hour. Be careful to shoot well forward, and if they are fifty or sixty yards above you, at least two or three feet before their heads.

In choosing your station, select either a bank or wall, that divides the sea from detached pieces of water, or marshes, or any other point, which can intercept the flight of the birds to their nightly feed. Should their course be generally up some channel, you may there anchor a boat or two, and either conceal yourself in one of them, or keep your station for the chance of their turning the birds towards you.

In rough weather, you may sometimes have sport for the whole day, by digging a masked intrenchment at the extreme end of some promontory, that divides one well stocked bay from another. It is impossible to direct

about the tides, as in some places the birds come in at low water, and the reverse at others; but, as they indicate a preference to the mud, by remaining there in weather when the canoes and punts cannot be put off, we may infer, that their leaving it proceeds from having been at first disturbed.

If the coast becomes too much frequented by shooters, and you can hear of a neighbouring pond or lake, take a walk to it in the course of the day, and see if the birds use it at night. This you will ascertain by going to the leeward side, where you will most likely find some of their feathers, which will have drifted to the edge of the water, and which, in case other shooters may be coming to explore also, you will do well to gather up or conceal.

When evening comes, take your station at the part nearest the spring, that supplies the pond; or, otherwise, anywhere to leeward, with a good light, and there remain in ambush, with your largest gun.

Here the birds will probably come in as fast as you can count them, and you have then only to wait till they are well packed together; in which case, you would probably get from ten to twenty at a shot.

If the pond is large, place some one concealed on the opposite side, who (should the birds be feeding out of your reach) will, by a gentle noise, be sure to make them swim over; but, if he overdoes his part, or shows himself, they will fly up. Never fire at random on such occasions.

The dunbirds and divers may be easily known by the disturbance they make in the water, and they will generally swim over the whole of the pond in a few hours; so that, in moonlight, you would be almost sure of them.

Should the pond be frozen over, you might sometimes have a very fine shot, by breaking open a large place in the ice, where they would collect together for the fresh water, and most likely be accompanied by duck and mallard. The chief of the shooting on the ponds by night is at the

dunbirds, which are vulgarly called red-heads; for, with the exception of the tufted, and scaup duck, the other diving birds prefer feeding by day. The golden-eyes and morillons go out every evening to sea, where, until the winter is nearly over, they will remain all night; though perhaps tossed on billows in the most tempestuous weather.

The following delineations of a shooting punt, with its stanchion gun &c., will convey an idea of the material in use for this diversion.

A Hampshire shooting punt though very long, is built so slight and narrow that to hold only one person, and has a stupendous gun, fixed on a swivel to a strong cross piece in the boat. This gun is so arranged, that it rests on the bow, and may be raised or turned a few inches by lowering the butt. You must row with your back to it till you see the fowl, then turn round on your face, and either work along with a stick in each hand, or, if the water be too deep for this, with two paddles. On having arrived within shot, you must relinquish the one on your starboard side, which, to prevent its floating away, should be made fast with a piece of string. You have only then to keep straight the punt with the one on the left, while with the right hand you regulate your aim and pull the trigger, which must be done while the birds are either sitting or just rising.

If they fly up, your labour is lost; but, if not, you may make a most unmerciful havoc; and, at the same time, your boat will be kicked back for some yards. Having recovered the shock, paddle in among your prisoners, and belabour, with a stick, all that have life remaining, or you will, probably, be capsized in trying to catch them. When you have got all your birds into the punt, you must go on shore, were it for no other purpose than to load your gun.

N.B. All punts and canoes, for such purposes (as well as the dress of the shooter), should be white; by which they become less visible on the water.

HAMPSHIRE COAST PUNT, STANCHION GUN, PADDLES, &c. &c.

MUDBOARDS, TWELVE INCHES SQUARE.

This punt must be 14ft. long, scarcely more than 2 broad, or 10 inches high, flat bottom'd, and increasing in width about 4 inches from bottom to gunwales; she must not exceed 1cwt. though the cross piece, in which the gun is fixed, must be very substantial, as well as on a firm and extended foundation, Gun 75 lb. 6 feet barrel, gauge inch and a half.

**DIRECTIONS.**—Sit with back to gun and row. To approach fowl, turn round; and, if deep water, paddle with one of B in each hand; if shallow push along with 2 of A, and, on getting within shot, let go the A on right, and steady punt with A on left, while you draw the trigger, the A's must be made fast with bits of string, to prevent losing them overboard.

N.B. Keep punt well fore and aft, and have her, and every thing about you white; except when the moon shines very bright; you must then rub your punt and paddles with a little mud, and dress a few shades darker.

With these mudboards put heel to one of the E's drawn under D. cross them over instep under D and C, and then tie them tight on instep. E E both spliced to C.

N.B. From these boards being so small and your having entirely to depend on E. E. they are not so safe as the others.

In an early number we will give the reader a further insight into the mysteries of wildfowl-shooting as practised on the coasts of Dorset, Norfolk, and Essex.

**RAVENS.**—The food of the raven varies at different seasons; grains form but a small portion, though they are sometimes eaten; insects and their larvæ, as they occur, may be occasionally preyed upon, but they by no means form so general a portion of food as they do among the lesser species of crows. The small mammalia are preyed on, and in spring, when all creatures are producing their offspring, the eggs of birds and the young of animals are sought after and devoured; and it is this carnivorous propensity which has caused them so much persecution from the shepherd. They are undoubtedly very destructive to the newly dropt lambs and to weak sheep, and the extensive range of a pastoral farm renders watching or attention quite impossible; but from this loss suf-

fered by the tenant must be subtracted the advantages derived from the check which they keep upon many of the smaller members of the animal kingdom, which, unless to a certain extent kept down, might, and on some occasions have, become extremely troublesome; for, on all our reasonings on the harm or advantages produced to man by various creatures, we are much too apt to look only at the question in immediate consideration, without at all examining its consequences on some other portions of beings, or on the productions of the vegetable world. It is, however, from its depredations on the young lambs that its persecution is chiefly carried on, and in many parts very considerable rewards are offered for its destruction.—*Naturalist's Library.*

## COURSING AND THE GREYHOUND.

## SECTION IV.—(continued from page 493.)

## BREEDING.—BLOOD.—SHAPE.

There have always been two extreme opinions as to the breeding of greyhounds; the one party insisting upon *blood*, the other looking to *shape*; but whatever difficulty there may exist in approximating these ultimas, they meet upon one ground in the use of the common term a *running sort*. It is certain that we are more frequently led into error by depending upon the blood only of the horse, than we are by a similar expectation in that of the dog: the reasoning, therefore, must either be fallacious in theory, or imperfect in practice. We well know that amongst horses the performances of two full brothers are seldom equal, but one is much superior to the other; this cannot happen from any difference in blood, and yet there are many sportsmen prejudiced enough to persevere, under the impression that the failing is but temporary, without making the smallest allowance for the deficiency of shape. Now whether this may arise from some defect of constitution in the sire or the dam is not very material for us to know; but the same thing rarely happens to any great degree amongst dogs. It has been observed by a writer of some eminence, "that the skilful huntsman differs from the sportsman in one respect, for the first very often gives away or knocks his hound at head, without trying him at all, if he does not approve his figure; whereas the sportsman always trains, if he likes the blood, let the horse be ever so defective in the formation of parts, &c." In this knowledge of "parts" consists the mystery of sporting science, and one obvious reason why we can form a more ready opinion of those of a dog than a horse is, that the human eye can better take in at one view the parts and proportions of a being so much smaller, than those of the other. This, in addition to the less severe and more rational treatment they undergo when young, accounts for that partial dereliction of celebrity in greyhounds of the same litter, or, indeed, of the same breed. Snowball as a sire, was more successful than any other greyhound, and the blood still continues in high and deserved estimation; his form has at length thoroughly superseded that motley breed used formerly to be so prevalent on the Wolds. As a winner no dog ever yet came off with so much eclat, and though it might probably be in some measure owing to the very indifferent qualifications of his adversaries at the time, it must nevertheless be universally allowed that his style of winning was far beyond that of any modern dog, and perhaps the best proof of his worth consists in the excellence of his progeny. It required, indeed, no inconsiderable share of perseverance to bring about a revolution in a race of animals, which in those days was so cruelly neglected, and so little understood; but luckily the reformer was a man whose knowledge of his subject was excellent, whose perseverance was great, and who by hitting on the right course, led to the vast improvements which the fleet longtails of the Goodlakes, the Ettys, and a long list of the patrons of coursing, have exhibited in the present day.

To arrive at that knowledge and information which will enable a man to contend with others of experience, and support his fame, is an arduous and bold undertaking, for unlike shooting or hunting we must not in this instance rely so much upon physical as mental assistance, which accounts for this species of diversion often becoming the last resource of the experienced and aged sportsman. It is pleasing to consider, that when the infirmities of age are creeping upon us, and the adventurous fights of manhood are settling into a calm and temperate seclusion, we have still the opportunity of gratifying that spark of native fondness, which though burning with a less ardent passion, imparts a warmth of convivial delight, and restores the recollection of past enjoyments. How often have we listened with boyish eagerness to the well-known tale of more prattling experience! How often in fancy gathered laurels of our own, and sighed for the completion of that period which would realise our fondest hopes! These are some of the pleasures of coursing; and we trust in the following sections, to give some valuable hints on the mode of attaining a courser's fame.

## SECTION V.

## MANAGEMENT.—FEEDING.

Greyhounds, above all other dogs should be prevented from running loose and unnoticed, or they soon contract an habit of straying out alone, equally to the prejudice of hares, and the violation of discipline; for however in nature he may be less inclined to ramble than the hound or pointer, still we all know that the greyhound may be tempted to do it, and instances are not wanting to prove where, through such mistaken indulgence, the animal has entirely forsaken his domestic habits, and assumed others of wanton ferocity. The temper of this dog is originally mild and inoffensive, but it will be found to vary considerably according to the mode and period of confinement; even so much so, that after being chained for no long space of time to a common wooden kennel, the greyhound will sometimes become as savage as the most zealous house-dog, and far more dangerous, for he would rush upon a person with the same quick and sudden attack that a hawk seizes its prey: he is almost ever on the watch, appearing to have less occasion for sleep than any other of his species, and his sense of hearing may be

rated in a similar degree with his powers of sight and action. The Count de Buffon mentions the swan as the finest model in nature towards improving the art of navigation; in like manner the greyhound perhaps presents as fine a form for excelling upon another element, for in no animal is the capacity and power of speed so inimitably displayed. In the first place, the position and form of his head when running against the wind, are admirably adapted for cutting and throwing it off his body, which is the contrary with most other animals, as they oppose not only an extended, but generally a more erect front: his width and depth of chest allow him a freedom of respiration which nothing but the most severe exertion can possibly exhaust, and the strength of his loins piloted, if I may so express myself, by the tapered shape and elastic spring of his stern, enable him to make those quick and sudden turnings which is the greatest beauty in a close running dog. His round feet, as I before mentioned, are not in my opinion so well calculated for speed as is generally imagined, but when the form of them is such, the objection perhaps is more than cancelled by the firm and even position of the legs, the length of which from the elbow to the knee before, and to the letting down of the hock behind, aided to the full and muscular expansion of the thigh, form altogether so correct an elegance of parts as enables him to move with an ease and freedom peculiarly his own. If your establishment of greyhounds is small, the plan of kennelling I shall recommend may be easily pursued, though it would not exactly correspond with one more extensive. If you keep no more than three or four brace of greyhounds, they should always lie in a stable purposely set apart for them and a couple of hacks, and made large enough to contain a separate kennel for each, of the following construction: the form should be a square of at least four feet, and two in depth, and altogether similar to a large potter's pannier, placed with the open ends upwards of course, and fixed steady to the ground by means of a piece of wood at each corner, but not so very securely that you cannot at pleasure remove it as necessity may suggest: hay is decidedly the best litter, whether you consider comfort or health of the animal; but it must be good, such, in fact, as you give to your horses, for the refuse of a stable is often damp and mouldy, and would if thus made use of be productive of endless disorder and disappointment. These beds should not be close to each other, but the space between ought to be large enough to admit a broom; and their being thus separated will give each dog a more distinct idea of his own property, which, when he has once ascertained, it will be difficult hereafter to induce him to relinquish; for a day it may be necessary perhaps to confine him by a chain, but seldom beyond that, or two nights at the utmost. If you make any objection to this plan, and say, that on days when your greyhounds are not wanted they will be liable to interruption by those who want your hacks, I answer that these hacks, as I call them, are entirely appropriated to coursing, and therefore can never be required, whether for exercise or work, without their companions; this constant habit of companionship creates a familiarity which in coursing is frequently attended with beneficial effects. There are many reasons for expelling dogs from a stable, and indeed, amongst hunters it is what I never would, upon any occasion, allow; they are when thus confined generally filthy animals, and the sight of one sometimes will damp the most ardent appetite; but the greyhound is certainly a strong exception, for he is neither so coarse in his feeding, nor so voracious of appetite; neither is he so spitefully malicious, nor so rude in his caresses; but altogether exhibits a delicacy of character, and a chasteness of disposition which is not found so decidedly to concentrate in any others of his race.

In the management, however, of this kind of kennelling, particular attention must be paid to comfort and cleanliness, and during the time that your dogs are either at work or exercise, the frames should be taken out into the air, the litter removed from them, and afterwards well shaken and supplied with fresh hay if necessary, for a dog before he lies down will always be observed to reconnoitre his resting place, smelling cautiously all around it, and expressing the utmost anxiety and uneasiness if it is not perfectly agreeable to his taste and fancy. Nothing can reconcile this apparent fastidiousness so effectually as cleanliness, for however strange it may appear, I have seen a dog though absolutely starving with hunger prefer a good bed to the most dainty food, which he no longer refused but greedily devoured the moment it was offered to him in this situation of quietness and rest; it should therefore be an invariable rule to have the food for every description of sporting dog ready to offer him the moment he comes in from work, and not suffer his appetite to be in any degree paralysed by the intermediate indulgence of a comfortable kennel, which only he should be allowed to take a final possession of when you have done all that may lie within your abilities towards the restoration of his exhausted powers.

(To be continued in our next.)

"Shall I cut this loin of mutton *saddle-way*? said a host to his guest. "No," replied the latter, "by all means cut it *bridle-way*, for then I may chance to get a bit in my mouth."

A DEALER IN THIRTY-NINE ARTICLES.—A gentleman, observing a clergyman in the *Gazette* as a bankrupt, expressed his astonishment, and wondered what articles he could deal in, "Thirty-nine," was the reply."

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBS.

## CHAPTER XI.

JACK SCROGGINS,—(continued.)

31. Church only appeared as a mark to hit at. Stopping his adversary was out of the question; and he again measured his length on the grass.
32. Scroggins was truly conspicuous in this round. He did as he liked with his antagonist, till he sent him down.
33. It was astonishing to see Church, considering the severe milling he had already received, continue to face his man with such confidence. He had no chance whatever, except being knocked down.
34. Church exchanged some blows in this round rather to his advantage, but almost laid himself down from exhaustion at the conclusion of it.
35. Scroggins, in making a hit, literally pushed down his opponent.
36. Church was hit down almost upon setting-to, bleeding copiously.
37. Scroggins, eager to put a finishing stroke to this game article, rushed in furiously and sent him down.
38. Church's face looked deplorable; when he received three tremendous blows upon his nose and cheeks. Scroggins put in also a severe body blow with his left hand, when Church, as usual, went down.
39. The battle might be said to be at an end, but Church's game was not yet exhausted; and Scroggins again sent him down.
40. Scroggins ran in to his adversary, like a bull, head foremost, at his body, and caught hold of the waistband of his breeches, but instantly recollecting, as it were, that he had committed an error, he slid his hands upwards. It might have been accidental; but the seconds of Church considering such an attack contrary to the established rules of fighting, thought that to fulfil their duty they ought to take their man out of the ring. The umpires, however, passed it over, and thus, fortunately for Scroggins, saved him from the disagreeable circumstance of a wrangle; or, perhaps, making a drawn battle of it.
41. Though Church could not win, yet he now and then felt for his antagonist's nob sharply, and in this round he put in a severe facer, but, ultimately, Scroggins sent him down.
42. Nothing. Church went down upon setting-to.
43. Scroggins again nobbed his opponent, and, to add to the severity of the punishment, Church received a severe body blow, before he found his way to the grass.
44. Scroggins hit his adversary cleanly down, and it was apprehended that he would not be able to come again; indeed, his backer wished him to desist from the contest. The seconds of Scroggins took the hint and threw up their hats in the air, as the token of victory. The outer ring immediately gave way, but Church insisted upon fighting longer, and the
45. Commenced during this confusion. The mind of Church was good, but his strength could not keep pace with his wishes. Scroggins was awake that victory was certain, and sent his adversary down in quick time.
46. Church was going now very fast, and was sent down upon setting-to.
47. The mortification of surrender urged Church to continue the battle while he was able to stand upon his legs; but it was all up, and he was only receiving unnecessary punishment, being sent down every round.
48. Church went down completely exhausted.
49. Notwithstanding the reduced state of Church he made a couple of hits, but it was only to be sent down.
- 50 and last. On coming to the scratch he was floored, *sans ceremonie*, and not able to meet his man any more. He was led out of the ring dreadfully beaten.

A gamer man never entered the ring than Church; he proved himself a complete taker, but as to the winning consequences of giving, he had much to learn. Scroggins, in the ring, was completely at home; cautious of himself, his judgment was excellent in perceiving when his antagonist was exhausted, and going in promptly to finish him off. He, however, gave a chance away, by running head-foremost at his opponent's body, a proceeding which at the present day would have lost him the battle. Scroggins, however, did not win this fight without considerable punishment about the nob, one of his eyes being nearly closed, and his face much beaten. He never exhibited any thing like such marks before. Church sprained his ankle severely in the third round; and had not this accident occurred, he might have stood up much better, perhaps with more chance of ultimate success. His confidence never deserted him throughout the battle; and he talked to his second between every round of his capabilities to continue the contest. After the great success of Scroggins in the two first rounds, when he in fact reduced winning almost to a certainty, many of the fancy expressed some little astonishment, that fifty-five minutes should elapse before Scroggins was able to send his man out of the ring! Mr. Jackson collected 20*l.* to reward the bravery of Church.

The friends of Tom Hall (known as Isle of Wight Hall), were extremely anxious to match him with Scroggins for 200 guineas a-side; but, after four meetings upon the subject, the last of which was held at the Mansion-house Coffee-house, February, 1817, the partisans of Hall offered to pay half the deposit between Scroggins and Turner, in order to induce the former to relinquish that match. Hall also proposed to add ten pounds which had been forfeited to him in a previous instance, to the battle-money; but the offers were declined. Scroggins had no objection to fight Hall, provided he weighed no more than 11 stone. However,

it was the general opinion among the best judges of pugilism, that Hall was too heavy for our hero.

After six months' interval, Scroggins again entered the prize-ring. His antagonist on this occasion was the afterwards celebrated Ned Turner. The affair came off in a field near Hayes Turnpike, Middlesex, on Wednesday, March 26, 1817; Scroggins fighting Turner 100*l.* against 50*l.* This contest ended in a draw, the particulars of which will be found hereafter in the memoir of Ned Turner.

A second match was afterwards made the 10th of June, 1817, Scroggins fighting Turner 120*l.* against 80*l.*

Upon a review of the merits of the drawn battle above mentioned, some doubts appeared to exist in the minds of the backers of Scroggins respecting the result of the ensuing battle. The following contest, however, which took place *ad interim*, not only tended to remove the doubts in question, but operated so strongly towards increasing their former confidence on Scroggins, as to raise the odds three to one that he was the victor.

A meeting was held at Tom Oliver's house in Peter-street, Westminster, on Friday, May 2, 1817, to complete the stakes for the match between the above pugilist and Ned Painter. Several pugilists were present upon this occasion, among whom were Scroggins, Carter, West-Country Dick, Ballard, Parcell, &c. Scroggy having drank freely during the evening above stairs, descended, in a *non compos mentis* state, into the parlour, and ridiculed Dick upon his defeat by Randall. He also offered to bet two to one upon himself against Turner, which was immediately accepted by Richmond; and, upon the latter's taking up the money, to deposit in some person's hands, Scroggins seized hold of the Man of Colour, and, in the scuffle, both fell. Scroggins now gave some ludicrous imitations of Richmond's mode of milling—calling him every thing but a good one, and offered to fight the Man of Colour, in the room, for any sum. The latter was much pressed, by all the amateurs present, to give Scroggins a thrashing for his improper conduct, but Richmond kept his temper, although called a cur for suffering such a little fellow to insult and triumph over him. Richmond was not to be moved from his resolution, and very properly observed, "That as Scroggins was under an engagement to fight Turner, the sporting world should not experience a disappointment from his disabling the man from fulfilling his agreement." This conduct, on the part of Richmond, was admitted to be handsome and manly by all present. Scroggins, however, would not be denied—fight he would with somebody, and to accommodate his penchant, a match was proposed between him and young Fisher, for twenty guineas a-side, to be decided instantly: the latter having gallantly beat the rough and hardy Crockey, before the Grand Duke of Russia, at Coombe-warren. Previously, however, the opinion of Mr. Jackson was taken respecting the propriety of Scroggins fighting, considering his engagement with Turner. Mr. J. "thought he ought not!" Scroggins over-ruled this objection, by declaring that nothing should hinder him from having a mill, provided Mr. Farmer would make the match. Shelton, in conjunction with some other amateurs, then put down the money for Fisher. The large room at the back of the premises was lighted up, the scratch made—bottles, lemons, &c. produced—the spectators retired to each end of the room, and the door was locked. Mr. Jackson acted as the umpire. Carter and Clark attended Scroggins; Richmond and a novice waited upon Fisher. Three to two on Scroggins. The parties shook hands—half-minute time was allowed—and sixteen minutes before twelve o'clock at night the battle commenced. More spirited betting or greater order never occurred either at Moulsey, Shepperton, or Coombe-wood.

## THE FIGHT.

Round 1. On setting-to mischief being meant, little science was displayed between the combatants; Fisher put in a slight body hit. Scroggins reeled in after his usual mode, and both went to work slap bang—some sharp nobbers were exchanged, and, in closing, both down, Scroggy undermost. ("Well done, Fisher!")

2. Fisher, full of gaiety, again hit, first on the body, and seemed resolutely determined upon following up his success. They both nobbed each other smartly; and, in struggling to obtain the throw, Scroggy, as before, was undermost.

3. Scroggins, from the effects of lushing, came quite noisy to the scratch, and laughing at Fisher, told him, if he could hit no harder than he had done, he must lose it, and he, Scroggins, would soon convince him of that fact. Fisher, not dismayed by this threat, not only fought with his opponent manfully, but threw him completely on his face. ("Go it, Fisher!")

4. This was a good round, and Fisher pelted away so sharply, that Scroggy seemed rather sobered from the contact. Ceremony was out of the question, hit for hit was reciprocally given, till Fisher slipped and went down. (2 to 1 on Scroggy was vociferated by his partisans.)

5. Fisher came to the scratch in the most lively style, and set to with as much *song froid* as if he had been fighting a mere commoner. They soon closed, but Fisher undermost.

6. Nothing but milling was the order of this round; both down.

7. Scroggins rushed at his opponent with all the impetuosity of a bull-dog, and made his one two tell upon Fisher's mug; but the latter stood to him like bricks, and contended gamely till he found himself undermost in the throw. (This change on the part of Scroggy brought offers forward of 4 to 1 in his favour.)

8. Fisher went to work manfully, and Scroggins slipped down from a hit, but, instantly recovering himself, instead of finishing the round, he rushed at Fisher, when some sharp blows were exchanged, till both went down.

9. Fisher with the utmost ease sent Scroggy down. (Bravo, Fisher—stick to him, my lad!)

10. One of Scroggins's peepers seemed a little damaged, but his canvas appeared so impenetrable, that the claret scorned to make its appearance. Both again down; but Scroggins, while on the knee of his second, gave two or three loud hems, as if to improve his wind.

11. This was a truly punishing round. Fisher hit Scroggins alight down—he was up again in a twinkling, and most furiously went in to mill his opponent; he was, however, ultimately sent down.

12. Fisher put in a good facer; but, in closing, both down.

13. As yet, nothing was the matter with Fisher, and considering Scroggins was three parts groggy upon commencing the fight, he convinced those around him what a fine constitution he possessed. Fisher was also viewed with admiration—and making allowance for his greenness in contending with a pugilist at the top of the tree, he proved himself an ugly customer for this modern Dutch Sam! In this round Fisher had the best of it decidedly.

14. Scroggins went down, in closing, but the advantage was on his side. When on his second's knee, he sneeringly observed to Fisher, that, "he could not hit hard enough; he had better give it in, as a few mere of his hits must finish him."

15, 16, 17. Nothing material on either side.

18. In this round Scroggy was flogged. Great applause to Fisher.]

19—23. Though Scroggins was the favourite, yet many present considered the event at this stage of the fight doubtful. (Upon several offers being made, Scroggy observed, "Aye, bet away, gentlemen, I can win it like fun. I lay 2 to 1 on myself.")

24—29. Fisher appeared still fresh, and, notwithstanding the desperate rushing forward of Scroggins to take the fight out of him, he never flinched from his man, but fought with Scroggins like a gamecock. (At the conclusion of this round, which was in favour of the cove of Stangate, he exclaimed with the utmost confidence "Who can beat me, alive? I can mill any of 'em!")

30, 31, 32. Scroggins had the worst of these rounds. He appeared rather distressed, and from the effects of the grog reeled about. Fisher exchanged many blows to his advantage.

33. This round was complete hammering. Scroggins wanted to put an end to the fight, and fought his way in with all the determination of a lion. His blows were terrific—and although he went down from a sharp hit, he instantly jumped up again and milled Fisher furiously till he got him down. (Carter now offered a guinea to half-a-crown. "Bravo, Scroggy—he is an astonishing fellow!" was the general cry.)

34, 35, 36. Well contested on both sides; but in the latter round Fisher missed putting in a blow, that might have materially turned the fight in his favour. He had hit Scroggins away from him twice, near the corner of the room, that laid him open, and instead of following up the chance, he retreated, and got sent down. Scroggins again loudly hemmed, upon his second's knee, for wind.

37. Scroggins sent down Fisher in a twinkling. This blow was on the face, and from its tremendous severity, his countenance changed like the hues of the rainbow. Scroggy shouted with glee, and offered to bet any thing.

38. Fisher again went down from a slight hit. Scroggins, with much contempt and confidence, "What do you think of that? I'll bet 100 to 1, I'll win it."

39, 40, 41, 42. Fisher fought manfully, but a change had taken place; he showed evident signs of weakness, and went down in all these rounds. (£250 to £100 on Scroggy, and his partisans roared with delight.)

43. Scroggins now began to finish in high style, and dealt out some tremendous punishment. (Guinea to a shilling was offered, but not taken.)

44 and last. Fisher came to the scratch much distressed, and Scroggins again milled him down. On time being called, Fisher could not rise from his second's knee, being very faint and rather sick, upon which Scroggins was declared the conqueror. The battle lasted forty-one minutes.

Fisher must be pronounced a good man, and had he fought more at the head he might have been able to have given a better account of the battle. His mug was a little battered; but in other respects he did not exhibit severe marks of punishment. He attributed his loss to the very heavy falls he experienced more than to the blows he encountered, and walked from the scene of action without any help. With a little more experience and good training, it might not be an easy task to conquer him. Scroggins fought under disadvantage; but the confidence he possessed in himself was truly astonishing; he urged that he could beat all the light weights, and entertained an idea that six men in the whole kingdom did not exist who could conquer him. He was much inebriated, and the danger he was likely to experience by losing a chance in his ensuing fight with Turner, seemed not in the least to operate on his mind. Though the above conquest was not an easy fight, he was as anxious to bet upon himself as the most interested looker-on, offering terms almost on every round. He was more beat about the face than his antagonist.

It was now decidedly two to one, and in many instances the odds were still higher throughout the sporting circles, that Scroggins would add another laurel to his wreath, in his second combat with Turner, on the 10th of June, 1817, at Sawbridgeworth, Hertfordshire, but, alas! the smiles of fortune abandoned our hero, and, for the first time in his life, he found himself in defeat! The flooring of this great favourite operated

like an electric shock upon the fancy; and the anxiety manifested by hundreds of persons, assembled at an early hour both within and outside the Waterman's Arms, to learn the event, beggared description. The defeat of Scroggins was not generally believed for some hours after the report reached the metropolis; indeed, such an event was thought almost impossible, so high was the opinion entertained by the patrons of pugilism of his milling capabilities. In fact, his house was not deserted till he arrived at home, about one o'clock in the morning. How changed was then the scene! No loud huzzas, as heretofore, to greet the conquering hero. No over-joyed backers to overwhelm him with their fulsome praises. On the contrary, a gloomy silence prevailed; his partisans had fled, and he retired to his pillow alone, depressed, defeated, and restless, even without the common merit allowed him of having lost his laurels in any thing like a well fought battle!

(To be continued.)

#### A FEW MAXIMS ON HUNTING WITH HARRIERS.

BY NIMROD.

(Concluded from page 489.)

We now come to the chase. When a hare is hallooed away, harriers should not be taken to the most distant point at which she was seen; but from fifty to a hundred yards behind it. If they are taken to the most distant point, and do not instantly take up the scent, their huntsman has then to cast them at a venture, and is more likely to cast from the line of scent than towards it. But if he goes fifty yards or so behind the most distant point where the game was seen, he would then know, for that distance of ground at least, which is the best and surest way to draw his hounds to the point. Let him, at this time stand still, and suffer all his pack to feel for the scent; inasmuch as, if as soon as two or three of them own it, he hurries them all on immediately, the scent is often over-run, and consequently lost. In bringing them up to this point, however, give them the wind if you can.

If a single hound goes off with a good scent, and can be depended upon, his huntsman should halloo on the pack to him as quickly as he can; but if it be with a bad scent, and he hurries them at this moment, they will be in expectation of a fresh scent; the hound that went away by himself will be lifted by the excitement, and the huntsman will often have a fresh scent to seek, if not lose his hare. If he goes gently up to the single chase-hound, and without noise, the rest of the pack will generally settle well to the scent, if it be not too cold.

If harriers divide in a burst, their huntsman should get as near to the chase he wishes to pursue as he can, and give some 'rattling view halloo.' Nothing is more ridiculous or futile than a huntsman hallooing 'hark forward' to hounds, unless he at the same time attempts to show them their way. As hounds do not speak English, they are not likely to understand what 'Hark forward' means. At this time also, the whipper-in must be in his place, and drive the pack up to their huntsman, only as gently as may be; 'keeping hounds together at all times,' says Mr. Beckford, 'is the surest means to keep them steady.' If the huntsman is not forward with the chase at this time, all he can do in the way of casting his hounds, is, to drive them by a rate or crack of his whip, and the chance then is, that he may cause them to lift, if they should be on the scent; whereas they would all instantly fly to his halloo, and join the chase-hounds.

But a word more about hallooing. No person should halloo to hounds, unless he is well forward at the time, except it be in the case of a view back, or a fresh break from a cover. It signifies little what words you use, as a hound's knowledge of language is confined to a view halloo, a call, and a rate. It is the tone of the voice, and not the words, that they understand; and hounds will always turn to the voice, if it be not a rate, which shows the folly of hallooing behind them, unless in the cases alluded to.

The field. It is a mistaken notion that harriers will stand being pressed upon, in chase, better than foxhounds. No person should ride farther forward than the tail of the pack, and then not on the line. If he rides abreast of the body of a pack of harriers, and their game—which it is so prone to do—turns short on the side on which he is, he is necessarily riding on the scent. It must be a bad pack indeed, if a sportsman cannot see the head from the tail hounds; and it is uncivil to the rest of the field, to ride in that place, where, if all rode, the sport could not go on; because it may be presumed that all may have an equal desire to get forward. A few yards wide of the tail is the proper place for a hare-hunter to ride, when the scent lies well; behind the hounds is his place when the scent is not good, because he is then not likely to cross it; and we know that hares will turn and shift more frequently with a bad scent than with a good one, which is not the case with foxes. With the latter, the worse the scent, the more emboldened are they to make for a distant point.

In riding to harriers, be careful not to cross the scent ahead. If you see them inclining towards a road, or foot-path, do not ride on to either but leave the ground unstained, for the hounds to try when they get to it.

In running a good scent, I never object to hear one of the field, if well up with the pack, give a cheering halloo—provided he be a sportsman, and knows what hounds are doing. It does no harm, for hounds seldom

attend much to a stranger's voice, and it is expressive of the pleasure of the hallooer, which necessarily adds to mine.

When there is no game on foot, I like to see my field keep their horses moving; they may ride up a hare; but I check them for riding after my huntsman whilst he is casting his hounds at fault. At that time, they had better stand still, keeping their eyes about them—on the foil, &c.

Never whip any hounds but your own, is a standing maxim amongst sportsmen. A stroke of the whip injudiciously given to an old hound, may make him shy and sullen, if not spoil him for ever. The correction of the whip should be left to those who are intimately acquainted with the tempers and dispositions of hounds.

Whipper-in. When hounds are to be whipped to their huntsman, when casting, it should be done gently, and with not too much noise; by which means hounds will draw towards him, trying as they go; whereas loud, repeated rates and cracks of the whip, too often make them fly towards him with their noses in the air. When a whipper-in observes hounds drawing properly towards their huntsman he should be all but silent. Again, if a hound be cast in a burst, and in using his best endeavours to join cry, he should not be rated at all. It may discourage him, and make shy, without a chance of doing good. But let a whipper-in have little mercy on a skirter. A hound that runs wide, without attempting to get to the chase, merits harsher treatment than another, who by flinging too wide, gets cast at a check, but joins cry the moment the scent is hit off. The best recipe for skilters is the halter. They are seldom or ever cured of the vice, and a couple of determined skilters, are equal to the ruin of the best pack of harriers upon earth.

When harriers are at fault, and a hit is made by one or more, the rest should be hallooed on instantly; it will command the attention of the pack, and get them more quickly to the chase.

Never cap hounds with loud halloos to a bad scent; capping them is then apt to make them wild, and should only be done when the scent is good, and with a flying hare. It cannot then be executed too quickly, and should be done in the true fox-hunting style. NIMROD.

#### THE SPORTING BANKER, OR A COCKNEY'S DISASTERS.

A partner in a banking house, who lived near enough to the abode of our worthy first magistrate to nose his lordship's kitchen whenever turtle was the order of the day, was residing for a short time lately at a small watering place on the coast of Essex. Being in the country he determined to partake of its sports, and for the first time in his life to have a day's shooting. "When we are at Rome," said the cit, "we must do as they *do* at Rome." A vulgar sportsman, such as a country squire, or a rusticated nobleman, sets off on foot or at least on a shooting pony, in pursuit of his game. A city Cresus disdains such simplicity. Accordingly our banker, with a merchant for his companion, got into his phaeton, took the pointers he had borrowed into the carriage, and ordered his servants in livery to follow him.

The dogs, who had never been used to such fashionable style of travelling, soon began to shew symptoms of uneasiness, and even of inclination to desert. They were detained, however, in part by caresses, and partly by force, till they had very nearly reached the scene of action, when, by a violent and unanimous effort, they all jumped out, and ran home except one, who was persuaded to follow by the servants behind. But even he might as well have gone as the rest; for hardly had they hunted three fields over, when the obstinate brute stopped all of a sudden, to the great surprise and chagrin of the city sportsman. They hallooed him on; they whistled to him; but nothing could make him move. "It was very provoking," they said; "they never saw a dog so restive in their lives." So, taking a whip from a domestic, they began to belabour the refractory *Carlo*, who darted into the covey, and away went the birds.

Before the banker could recover from the alarm occasioned by the flapping of their wings, take up his gun and cock it, the partridges were out of sight. These were all he saw that day; nor could he sufficiently regret the bad behaviour of the dog. "If he had not stopped," said the banker, "I should have fired into the thick of the *brood*, and killed one half of them." His companion "made no doubt but he should have killed the rest."

On his return to his carriage, the *man of money*, determined to try his skill at some sparrows on a dunghill. He shut his eyes; and before he could open them again to count the dead sparrows, a pig which was lying under the straw, and which he had shot in the head, came running out, and laid itself at his feet, squeaking most horribly in the agonies of death; and out came the farmer's men with flail and pitchfork; and out came the farmer's dog and seized him by the coat; and out came the farmer himself and took him by the collar.

Perceiving himself thus beset, the banker offered an honorable composition; but when he found that no less a sum than three guineas was demanded, he demurred, and said "that a pig of equal size might be purchased for less money in London." His companion, however, observing "that pigs were more plentiful in Leadenhall Market than in the country," the money was produced; and the farmer, and the farmer's men, and the farmer's dog retired to their respective kennels.

It is the quality of a great mind not to be discouraged. The banker, therefore, reloaded his piece, and ere he had proceeded far, hearing a

rustling in the hedge, he let fly at a venture. The report of the gun was immediately followed by "*Good lort I'm shot. As Got shall shave me I'm shot!*" It was a Jew who had been making a sacrifice which was no that of the Paschal lamb, and who at the close of it, while employed in plucking up grass, and shrubs of broader leaf, and more commodious received a large portion of the charge in that part, according to Butler,

"A kick hurts honour more  
Than deepest wounds received before."

As the banker had never seen a magpie in the city that did not speak, he supposed that the whole species were naturally loquacious, and made no doubt but he had killed one of those talkative birds.

"I have shot a magpie," said he to his companion, and off he ran to pick up his game; when in the passage of the hedge he was met face to face by the furious Israelite. Seeing him in the nakedness of a *sans culotte*, and bleeding from flank to flank, the banker started back in speechless horror. The "circumcised dog" pursued him, and took him by the throat, swearing by the Got of *Moses* that he would have "blood for blood;" and this dreadful threat he would probably have realized, if the banker's friend had not offered him "egregious ransom." At the first mention of money, the bleeding member of the half tribe of *Manassah* relaxed his gripe, examined the paper that was tendered to him by the banker, and was well satisfied when he found it to be a genuine five pound Bank of England note. DOLLY.

#### METHOD OF KILLING BRANTS, A KIND OF WATER-FOWL, ON THE RIVER MERIMASHEE, IN NORTH AMERICA.

On any point of land between two creeks, bays (or which is best), between two rivers, the sportsman takes a small branch or twig from a tree, the small end of which he fixes on the sand, close to the water-edge, to the height of the bird he means to represent; near it he fixes two or three other sticks to the height of the body; round these sticks he wraps some sea weed, so as to resemble, as much as possible, the wings and tail of the bird, and the upper end of the stick the neck and head; so that, to view it at a distance, it will very much resemble a bird. He sometimes makes two or three of these decoys close to each other, which being seen by the birds at a distance as they fly along, entice them to come on, and take a sweep round, supposing them to be some of the fellows. At a proper distance he makes pits in the sand, and around it places some shrubbery, or small branches of the crops of trees, to cover himself where he sits, that he may not be seen by them. This is always done on the windward side of the point, which, for the most part, sea-fowl are fondest of frequenting. A flock of them in passing by, suppose these objects to be real birds, and come close up to them; on which the sportsman fires, and if he happens to kill one or two, he places them on the water, with a sharp-pointed stick, one end of which is fixed in the sand, and the other under the chops of the bird, which holds up his head as if alive, and the motion of surge keeps him heaving up and down, and from side to side, so that it is next to impossible to discover the deception.

The next flight that comes alight close by this, on which he readily fires, sitting; and every one he kills, he places close by the other, in the same manner with the first. This he continues to do, till, in a few hours, he may have as many as will fill a canoe, or as many as he chooses to carry home. The birds are so numerous in these bays, and flocks of them so frequently passing from one point to another, that there can hardly be an end to this diversion, at which, indeed, the Indians are most expert.

#### THE LAST CAPEL COURT STAG.

CONSIDERABLY AFTER MOORE.

'Tis the last stag of Capel-Court—scheming alone?  
All his swindling companions  
Absconded and gone;  
No scamp of his kindred,  
No Jew-boy is nigh,  
To reflect back his wishes,  
And give sigh for sigh!  
They've all left him—that base one,  
To pine in the court;  
While the upright are reaping,  
His pockets are short!  
Thus lonely he shudders,  
When thinking how blest,  
Are those who are honest,  
While he cannot rest!  
And thus may all suffer,  
Who venture to throw  
On those too confiding  
Both ruin and woe;  
When false stags are scatter'd,  
Then honest men may  
Invest tin in railroads,  
Expecting *Fair Play!*

# ADVERTISEMENTS.

**G. T. BALL,**  
REGISTERED DAGUERRETYPEAN PORTABLE  
LOOKING GLASS.

**NOVELTY, UTILITY, CONVENIENCE,  
COMFORT, AND ECONOMY.**

THE DAGUERRETYPEAN LOOKING GLASS.  
If you value personal comfort, neatness of appearance, cleanliness and acceptability at the social board, or the society of the fair sex, provide yourself with the last triumph of cheapness, ingenuity, and utility. It is a portable pocket mirror, in a brass case, suited to suspend against the wall, hold in the hand, lie flat, or be self-supported at an angle of forty-five degrees on table or shelf, presenting in a compendious form a looking glass, a shaving reflection, and an invaluable counsellor after the heat of the race, the ride, the promenade, or before the entering a ball room, and in fact no person ought to be without one.

To be had Wholesale and for Exportation at 86, Newgate-street, London.

**SHIPPERS, MERCHANTS, AND COMMERCIAL TRAVELLERS** are respectfully requested to inspect the DAGUERRETYPEAN LOOKING-GLASS. It will be found the most novel, useful, attractive, and saleable article at home and abroad, in the City or the provinces, ever offered to their notice. The Registered Proprietor and Manufacturer, G. T. BALL, are prepared to execute orders to any amount, for the various sizes of the DAGUERRETYPEAN Looking Glass, on terms particularly advantageous to dealers.

86, NEWGATE STREET, LONDON.  
December 16, 1845.

**EVERY MAN HIS OWN HARNESS MAKER.**

**THE DURHAM DUCIE HUNTING AND**  
Travelling Knife.—J. B. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of noblemen, sportsmen, and all persons in the habit of driving, to his newly invented Knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.

By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

A Windsor Castle, Oct. 4, 1845.  
"Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

Disqualified horses not drawn.—Prizes go with the stakes. Draw nights, Tuesdays and Fridays.—Post-office orders to Mr. N. F. Okey, Hero of Waterloo Inn, Waterloo-road, London. N.B. These sweeps will be drawn as soon as full, and the tickets forwarded according to the address given.—The prizes will be paid the first Tuesday after the race, less five per cent. If any horses should die or be disqualified prior to the draw, the amount will be deducted from the starting money, as above.

N.B. A 10s. 6d. Sweep is expected to fill every month.

**BILE! BILE! BILE!—WORBOYS**

**VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, suffering of the stomach, flatulency, habitual constiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1d., and 2s. 9d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.

N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence  
Volume I. of

**THE MYSTERIES OF LONDON,**

By **GEORGE W. M. REYNOLDS,** [Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.]  
\* \* \* This magnificent volume contains 424 royal octavo pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies.

London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

Now ready, with two spirited Steel engravings gratis,

Number 1, price One Penny.

**The Prisoner of If; or The Revenge of Monte-Christo:**

By A. DUMAS.

Now ready, the Seventh Number of the new and popular Historical Romance of  
**MARGARET OF NAVARRE;**

OR,  
**THE MASSACRE OF ST. BARTHOLOMEW'S EVE;**

By M. ALEXANDER DUMAS.

This Work is published uniform in size and price with "Marie Antoinette" (Penny Numbers and Fourpenny Parts), and with the number is presented a beautiful engraving of  
**THE MASSACRE OF THE HUGUENOTS ON ST. BARTHOLOMEW'S EVE.**

With the Second Number, a splendid Vignette on steel gratis.

\* \* \* Other works by the same celebrated Author are preparing for the press, and will be speedily announced.  
London: G. Pierce, 310, Strand.

**SPIRIT-STIRRING AND STARTLING ROMANCE.**

This day is published Number Three, price (One Penny, of the popular Historical Romance, entitled

**ROBERT OF ARTOIS;**

Splendidly illustrated. This interesting and original production is one of the most successful of modern times, its Gorgeous and Interesting Scenes, Moving Adventures, and Splendid Delineations of the most Famous Characters of the fourteenth century are unrivalled.

London: E. Farrington, 16, Bath-street, Newgate-street; Heywood, Manchester; Smith, Liverpool; and all Bookseller.

**NO MEDICINE for the CURE OF ASTHMA**

and Consumption, Coughs, &c., was ever attended by speedy and unflinching success as DR. LOCOCK'S PULMONIC WAFERS. In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.

From Mr. W. W. Payne, Chemist, 18, North-street, Brighton.

September 26, 1845.

"Gentlemen,—Since I have been your agent for the sale of the Pulmonic Wafers, I have had many opportunities of witnessing their beneficial effects, so that I do not hesitate to recommend them with confidence in all pulmonary affections. I beg to forward to you the enclosed testimonial. I can vouch for its accuracy, and Mr. Cunningham is a very respectable farmer.

I remain,

W. W. PAYNE.

Cure of 50 Years' Asthma.

Extract of a letter from Mr. Cunningham farmer, Ardingly, near Lindfield, Sussex.

September 26, 1845.

Sir,—I feel it a duty incumbent on me to inform you, for the benefit of others similarly afflicted, the astonishing relief afforded to my wife by Dr. Locock's Wafers.

She was afflicted with confirmed asthma for fifty years, from which her sufferings were dreadful. She was recommended last winter by a friend to try the wafers; she did so and the effect was truly astonishing; indeed, the first box gave her immediate relief, &c.

Signed, JEREMIAH CUNNINGHAM.

DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

**CAUTION.**—To protect the public from spurious imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.

**THE EARL OF ALDBOROUGH**

CURED BY

**HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated

Villa Messina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY.—

Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment in case of any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines throughout THE CIVILISED WORLD, at the following prices:—1s. 1d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope) 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Sympoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 83, Oxford street; Gordon, 146, Leadenhall-street; Parkins, Compton street, Soho, and all Booksellers.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Sympoms.

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation free, (if by letter), £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.

At 106, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deanagate, Manchester, on Mondays, Tuesdays, and Wednesdays.

**LONDON.**—Printed by JOHN WORTHEM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holwell-street, by E. DIFPLE. — Thursday Dec. 27th, 1845.

# THE Sportsman's Magazine

No. 34. FOR THE WEEK ENDING JANUARY 10, 1846. THREE HALF-PENCE.

[Stamped to send free by Post, Three-pence.]

LIFE IN LONDON

FOX-HUNTING.—PLATE I.—THE KENNEL-DOOR.

LIKE the lyre of Anacreon, which, though newly strung and attuned to warlike measures, still responded only to the chords of love and the praise of Bacchus, so does our spirit, despite various discordant discursions return with alacrity to sound the praises of the "noble science," the glorious sport of Foxhunting; hence do we preface these desultory papers with the sincere wish, that with the rising generation of British sportsmen this manly and soul-stirring amusement may ever continue to hold the high rank it yet does among British sports; nor may the quarrel-breeding, mob-collecting, exhibition of the steeple-chase supplant that noble pursuit which affords gratification to every class of rural society. Beckford says with great truth, that "Hunting is the soul of a country life; it gives health to the body and contentment to the mind; and is one of the few pleasures we can enjoy in society, without prejudice either to ourselves or our friends." It not only finds employment for numerous hands in nearly all our trades and manufactures, but amongst the higher ranks, it is an effectual security against the intrusion of idleness and spleen; it affords to the man of property an ample scope for the display of generous and social feelings, and far better occupies the place of the more fashionable and expensive amusements of the metropolis, which only tend to excite, and not to satisfy our fancied and artificial wants.

BUT: to panegyricize foxhunting is indeed to

Glild refined gold, to paint the lily,  
To throw a perfume on the violet,  
To add another hue unto the rainbow,

all which the "bard of all time" has declared to be "wasteful and

ridiculous excess;" we, therefore, refrain and at once proceed to the subject of our first plate.

## THE KENNEL DOOR.

In future papers we shall have ample opportunity to say all we choose on the larger biped and quadruped performers in the chase, here it will be "our cue to speak" of the staunch hound; for while the hunter has been the subject of almost constant panegyric, it is no less strange than true that his companion the hound seems much overlooked now-a-days by sporting scribes.

Out of a field of one hundred and fifty persons, who call themselves sportsmen, you will not see more than three particularly noticing the hounds. After spending the evening with men, who, from their conversation, might be supposed to live in the saddle, and who seemed to consider hunting as the greatest of all earthly enjoyments, you may go into a kennel the next morning with those very men, and observe that, though they constantly and regularly hunted with them, they did not know the name of a single hound; and while in conversation with the huntsman, you may see them stand with their backs against the wall as unconcerned as if they were amid a flock of sheep. Look at a perfect fox-hound as he stands before you, and show me an animal in the whole creation so admirably formed for speed and endurance? Although, during a chase, he not unfrequently covers nearly twice as much ground, yet he tires the fox, the deer, and the horse. In pursuit of his game he fearlessly plunges into the rapid stream, dashes impetuously down the dangerous steep, and unhesitatingly forces his way through the prickly gorse and thickly entangled thorns and briars. Look at him the next morning as with a groan, expressive of his pain,

he stiffly rises from the bench, his chest raw, his stern half stripped, his nose twelled, and his eyes sore; and although he can scarcely see you, yet when he hears your voice, he gently haile you with a whine of recognition. Your kindly notice cheers him, he forgets his sores, soon recovers his activity, and is ready for your service again. The man who can witness this, and be unmindful of the merits of the hound, is unworthy of participating in the joys of the chase.

Our first remarks then shall be directed to the formation of a pack of foxhounds. If you have sufficient walks or quarters, as they are sometimes called, to enable you to breed your own, begin from a good stock at first; there is plenty of choice, and bad blood once introduced may blight the fruits of your undertakings for many years to come; above all, remember the words of the dying huntsman, "Breed 'em w' plenty of bone." A new pack will seldom allow of the breeding establishment being very extensive for the first season, it is never worth while to breed from very old bitches, the whelps they throw are frequently small and weak, and those which can be really depended upon as being of a good family, and sound constitution, will, of course, not be very numerous. Never breed from those which are delicate, of either sex, and never propagate vice in your kennel, by breeding from any one which is notoriously wild and vicious, though he be ever so stout and handsome. After Christmas, such bitches as you may intend to breed from, should, on their coming on heat, be immediately put to the dog, and on no account should they be suffered to go to work again that season; no bitch should be put to after the first or second week in May, late puppies seldom do much good.

Before the breeding season commences, care should be taken to have every convenience in readiness for the comfort of the bitches. Under the south-side (if possible) of one of the paddocks, should be placed at certain distances, numerous roomy dog-cubs, with small separate enclosures attached to each, made with hurdles, resembling sheets of paling in miniature; the bars being nailed on perpendicularly renders it more difficult for the puppies to climb over, than when they are placed horizontally. Hither should be brought each dam, a few days after she has produced, and her whelps have acquired a little strength. When the bitches become heavy, they should be shut up at night separately, in dry, warm places, made for the purpose, where they can be kept very quiet; here they may be allowed to whelp, and on no account should their puppies be looked at or handled, until some hours after they have come into the world. It is a bad plan to allow them much straw, as when the litter is too abundant, particularly when long, it is apt to get twisted round the necks of the puppies, and strangle them.

Three are quite sufficient for a mother to suckle, that is a moderate nurse, but a good stout bitch, with abundance of milk, will occasionally bring up as many as seven. Mr. Assheton Smith had a hound some years ago, named *Governess*, which was so famous for rearing puppies as she was excellent in the field, and during the spring and summer of 1831, produced and reared two litters, amounting to fourteen, which did well, and went to quarters. The first litter were by that famous hound Watchman, the second by Mr. A. Smith's *Barriester*; a circumstance worthy to be recorded in the annals of breeding hounds. It is an excellent system which is pursued in some establishments, to keep one or two cows for the exclusive use of the puppies. The huntsman is generally allowed the keep of one for his own family; at *Boothby*, where every thing connected with the kennel department is on a scale of the greatest liberality, the huntsman was permitted to keep two cows, and the whippers-in and boiler have the run of one each in the park. I shall not enter into the detail of managing and rearing the young puppies, and shall only add that the cleaner they are kept, and the better they are fed, the more likely they are to arrive at maturity. If the distemper breaks out, those which are affected, should be immediately removed to a distance from the rest which may be healthy, or the most fatal consequences will ensue. Sometimes young puppies, without any apparent cause, become knotty in their skins, and while their bellies are much distended the flesh upon their bones visibly wastes away. This almost invariably proceeds from the place where they lie being more or less damp, and nothing will be found more likely to eradicate the evil, than the removing them to a warmer and drier place; they should have tincture of rhubarb administered to them in small doses, and be dressed with a little of the common kennel dressing, adding but a small quantity of the turpentine, and totally omitting the spirit of tar. Each litter should be separately marked, independently of branding them; otherwise they return from their quarters having rambled about the country, and having changed their walks with others of the same age and colour, it will be totally impossible to remember how they were bred, or to which litters they belonged. These "private marks," as they are called in the kennel, are generally made on the lips, the deaf ear, or by cutting off the ear-buttons; another way of marking them is, by dipping a thread into wet gunpowder, or Indian ink, and drawing it with a needle under the inside skin of the ear, in the shape of a T a V an X, or any other device which may take the marker's fancy—it is a neat way of doing the business, and

attended with less pain than clipping the lips or ears. "It is the judicious cross," says Mr. Beckford, "that makes the pack complete. The faults and imperfections in one breed may be rectified from another, and if this be properly attended to, I see no reason why the breeding of hounds may not improve till improvement can go no farther." And in another place, he gives the following advice. "In breeding, I would advise you to be as little prejudiced as possible in favour of your own sort, but send your best bitches to the best dogs, be they where they may. Those who breed only a few hounds may by chance have a good pack, whilst those who breed a good many, may (if at the same time they understand the business) reduce it to a certainty." The custom of sending out bitches to a distance, is attended with a very great expense; nevertheless, it is the only path to be pursued, where the breeding department is on a large scale, and perfection in the pack is the grand desideratum. Where the establishment is small, and strict economy is continually jogging the memory, it would be an advisable plan to obtain a stallion hound of a good sort, from some quarter that can be depended on. A good judge in these matters might have many chances during the summer, of procuring one, or even a couple, which should be kept for the purpose until the following spring. Few owners of packs are in the habit of parting with a stallion hound, which is worth accepting, early in the year; but in the months of May or June, a young dog of good blood, which may by accident have become stifled, or otherwise injured in his limbs, may generally be obtained for the purpose of propagation, during the ensuing breeding season.

Nothing would be more likely to improve the breed of fox-hounds, than prizes, to be awarded by competent judges, to those who might excel in so delightful a speculation as showing a couple or three young hounds in a sweepstakes. The awarding prizes to the best breeders and feeders of cattle has been attended with the most beneficial results; and I see no reason why improvement in the breed of the fox-hound should not be promoted by the same means. Some years ago, three celebrated masters of hounds, made a practice of showing a few couples of their new entry for a prize, which was most appropriate—namely, a piece of scarlet cloth, to be made up into hunting coats.

The practice of spaying bitches, so frequent in many kennels, although it has its advantages in augmenting the number of your forces in the spring, and in occasionally being the means of giving strength to the sickly, and reclaiming wildness, is by no means to be recommended; it is a most barbarous and cruel practice, extremely difficult to perform, and, in many instances the operation fails to have the desired effect. Not unfrequently bitches thus unmastrated will show the same desire for copulation, as others which have not been so cruelly tortured; and in several instances have even been known to produce whelps. In the spring of the year 1831, when the late Mr. Russel was master of the Warwickshire hounds, and under whose indefatigable care and directions that pack obtained so great a celebrity, the operation was performed upon nine couples of bitches; with what effect the reader may judge for himself, as out of the number several came on heat, and two or three absolutely produced whelps, but much deformed; as some had forgotten to bring their heads into the world, and some their legs, which few will dispute as being most necessary members for an efficient fox-hound.

And here, lest our article should become too prolix, we take leave of THE KENNEL; although in "GOING TO COVER," which will form the subject of our next picture, we will take the opportunity of partially resuming it. We would also refer the reader to the twenty-sixth number of this Miscellany for some observations on the true form and peculiarities of a perfect hound.

**A POEPLISTIC PATRONYMIC.—SINGULAR WAGER.**—A bet was made a few evenings ago at a sporting house at the West end of the town, arising out of the name of *Sambo Sutton*. One party contended that this prefix was not a baptismal name; a second party insisted that it was a nick name; and a third that it was neither, but the name of a caste in the West Indies. Some heavy stakes were deposited, and it was mutually agreed that the question should be left to the decision of a gentleman long resident in the West Indies. In the course of the inquiry arising out of this wager, the following singular details respecting the shades and various castes in that part of the globe were elicited, viz., "That the offspring of a white man and black woman is a *mulatto*; the *mulatto* and black produce a *sambo*; from the *mulatto* and white comes the *quadroon*; from the *quadroon* and white the *mustee*; the child of a *mustee* by a white man is called a *mustee-fine*, while the children of a *mustee-fine* were free under the old slavery laws, and rank as white persons to all intents and purposes. The popular notion that two *mulattoes* cannot have children is proved to be erroneous." From this it will be seen that the word *sambo* is the name of a caste.

**KEEPING IT IN THE FAMILY.**—Mr. O'Connell has increased the subscriptions of his grandchildren to the Repeal Fund. He knows well enough that it is only taking the money out of one pocket to put it into the other.—*Punch*.

\* Almost the last words of old Tom Grant, many years huntsman of his Grace the Duke of Richmond.

\* Sir Harry Mainwaring, Mr. Wickstead, and Mr. Foljambe.

## BRITISH BIRDS.—NO. XXV.

THE MOORHEN.

**T**HE Moorhen, which goes by the name also of the Waterhen, finds a place here as forming a link between water and land birds. The male called the Moorcock is weight ordinarily about fifteen ounces; its length to the end of its short tail fourteen inches: the breadth twenty-two inches. The plumage of the female is much less brilliant than that of the male; in size she is also inferior. Mr. Willoughby, in his description, takes no notice of the beautiful olive gloss of the moor fowl's plumage; nor that the bill assumes a fuller and brighter red in the courting season: his natural history of it in other respects, however, is very simple. The moor hen feeds on grassy banks and borders, near to fresh waters, and in the very waters, if they be weedy. It builds upon low trees and shrubs by the water side; breeding twice or thrice in the summer; and when the young are grown up, drives them away, to shift for themselves. They lay seven eggs, of a dirty white colour, thinly spotted with rust colour. It strikes with its bills like a hen; and in the spring has a shrill call. It may be observed, that the bottoms of its toes are so very flat and broad (enabling it to swim) that it seems the link that connects the cloven-footed squatics with the fin-toed.

## WRINKLES FOR THE GROOM.—NO. XI.

**E** continue our Wrinkles with a series of the casualties which most commonly present themselves in the stable, after severe field or road-work.

## CORN

Are rarely experienced on the feet of those horses which receive a fair share of attention; indeed, I should almost feel disposed to say that, when they do make their appearance in a stable of a gentleman, something is not right. As far as my small experience of this complaint goes, I have never encountered much difficulty in effecting a cure, though, when they have been suffered to become thoroughly established, it is rather a work of time. I have frequently heard it asserted that shoes which are made to fit close at the heel are a fertile source of corns, but experience has satisfied me to the contrary. Indeed, with hunters it is absolutely necessary that they should be as short as possible, otherwise in deep counties the strain on them will be so great as to cause a never-ending annoyance from this being pulled off. If, therefore, this was a source of corns, hunters could rarely be free from them; but the fact is, it has nothing to do with it. Provided the shoes are not permitted to remain on long enough to become embedded in the hoof, no bad consequences will ever ensue. However, supposing any one so unfortunate as to be plagued with them, the remedy is simple enough, unless they have been suffered to run on to a very great extent. The shoes must never be left without removing, longer than is absolutely necessary to give the horse sufficient time to afford fresh hold for the nails. The seat of corn should be thoroughly well pared out at each shoeing, and a dressing of tar applied. A shoe somewhat wider at the heel than usual should be adopted, which will equalize the pressure, and serve, in some measure, to ease the affected part. Some persons have the shoe "seated" for this purpose, which, perhaps, in the worst cases, is no bad plan. Of course, a bar shoe is the greatest protection of any thing; but that can hardly be adopted with hunters. In purchasing a horse affected with corns, care should be taken to ascertain that nothing worse is the matter: they are occasionally no bad excuse for grogginess.

## CUTTING,

Or what by some persons is termed "interfering," is no uncommon annoyance to the possessors of studs. It may generally be considered a

sign either of weakness or defective formation. There is no end to the different plans which imagination has devised for its prevention; but I believe, in most instances, especially with hunters, the best plan is to have immediate recourse to a boot. Some horses only do it when on the road on their way to covert: with them, of course, any sort of defence will do; but when it is necessary that it should be kept on during the whole day, nothing will answer the purpose like the India-rubber rings. From their elasticity they can never interfere with the action of the limbs, and, from their being the same size all round, the injured part can never be left unprotected by their being turned round, which will always be very liable to happen in going through any thick covert. I have tried having the inside of the shoe rounded, or bevelled off as much as possible, without weakening it too much, but never experienced any permanent benefit from it. As to the system of making the inside of the shoe lower than the outer, I can only say that, even supposing it should have the desired effect, the remedy is likely to be fully as bad as the disease. The plan of allowing the hoof to project beyond the shoe may, I dare say, answer well enough, where the work is of such a nature as to admit of the inside nails being omitted; but this again will not do with hunters.

## GROGGINESS.

Here again we come to a disease which will only admit of palliative measures. Nerving will, no doubt, produce almost certain relief; but we must recollect that with hunters, which have to tread on all descriptions of ground, varying suddenly from rough and smooth, and from smooth to rough, it is hardly safe to deprive the foot of sensation; therefore with them this operation is hardly available. There can be no doubt that, after the disease has arrived at its most distressing stage, the horse can have no business in a stable of hunters; nevertheless, when only in a milder form, he may be capable of performing plenty of work with bounds. Great relief will be obtained by putting the affected foot into a large bran poultice at night, after every hard day's work. Upon its being taken off in the morning, the foot will feel comparatively cool, and a material difference will be observable upon the horse going to exercise.

## OVER-MARK.

Upon this subject I shall be very brief. When a horse is once decidedly over-marked, it will require far more knowledge than falls to the lot of inexperienced persons, or indeed of most grooms, to cope with it, with the slightest chance of success. Inflammation follows on its heels with amazing strides. A regular bred veterinary surgeon is by far the fittest person to deal with it. As I have throughout these wrinkles endeavoured, as much as possible, to avoid a repetition of any thing which has appeared in print elsewhere, I shall content myself with referring my readers to "Condition of Hunters," by the able pen of "Nimrod," where they will find such instructions on this head as, if properly acted up to, will prove effective, if human aid can avail. I would, however, remark that in this, as in all other things, prevention is better than cure, and if all hunters were in proper condition and fairly ridden, there would be very few causes for lamentation from this cause. Nevertheless, after every hard day, however well the horse may apparently return to his stable, it may be advisable to substitute a good large bran mash for the usual allowance of oats and beans: it will tend to cool the system generally, and keep off fever; and the horse will be likely to take his regular feed in the morning with greater zest.

## OVER-REACH.

It is now so thoroughly understood that this injury is not inflicted with the toe of the hind shoe, as was formerly supposed, that I need not dwell upon that point. Indeed, since the system of bevelling off the inner edge of the hind shoes has become general, cases of bad over-reach are of comparatively rare occurrence. When, however, they do occur, they must be treated in the same manner as other wounds, of which I shall speak in due course. Those horsemen who ride loose are much more subject to over-reach than those who hold their horses well together, especially when going through deep ground, at which times the injury is generally done.

**PISCATORIAL OPERATIONS IN THE NORTH.**—That "there is a tide in the affairs of man" is a solemn truth, amounting to more than an axiom. There is also "a time for all things;" and at the same time it must be added that there is not a month in the whole year but the true British sportsman may enjoy himself to his heart's content by "flood and field." The weather being so mild and open, we learn from the North that although the trout season, and that for other fish, is past, some of the thorough-bred disciples of Isaac Walton, enthusiastic devotees to the patient art, have been exercising their rod and line to considerable advantage in the beautiful and romantic lakes and waters of the north. Their sport has been confined to char fishing. The char is generally considered to be the most beautiful and valuable fish of the lakes. In Windermere, Buttermere, and other adjacent lakes, where this kind of fish most abound, large quantities have been killed; it is stated that as many as five to seven dozen have been taken by the rod and line in one day; this extraordinary success is principally attributed to the fineness of the season.

## TO CORRESPONDENTS.

**SELECTION, Cardiff.**—The occurrence is entirely beyond our comprehension. No copy of Number 28 left our office without being accompanied by an Almanac. It must have been detained by the vendor, as in some instances we have known of the Almanac alone being sold for a shilling. The Almanac (stamped) and the paper (stamped) both free by post, can be had for fivepence, by addressing to the office, 42, Holwell Street, London.

**ROBERT HALL.**—Mr. R. loses his stake by not appearing to play at the time agreed on. **A BUCKINGHAMSHIRE MAN.**—Caunt fought Brasseys for 80 minutes, 101 rounds, Oct. 27, 1849. Brasseys was dead. He was beaten by Tass Parker, whose weight is 11st. 10lbs. Brasseys's weight was 12st. 8lbs.; Bendigo's fighting weight is fairly stated at 13st., although he was but 11st. 11lb. when he fought Caunt on the last occasion. Caunt's general weight is full 15st., his fighting weight, on the last occasion, was 14st. 8lbs. He is more than four inches taller than Bendigo.

**R. H.**—The "Handbook of Training for Wrestling and Pedestrianism," is by the Editor of this paper. Clark, of Warwick Lane, is the publisher.

**SECUNDUS.**—Lord Grosvenor (the late Marquess of Westminster) won the OAKS Stakes three successive years. The late Duke of Grafton won the Oaks eight times. The Prince of Wales (afterwards George the Fourth) won one DERRY (in 1788 with Sir Thomas). The late Duke of York won two (in 1813 with Prince Leopold, in 1822 with Moses).

**A PROXIMITY FANCY.**—Really you are too hard upon us. We said in our coast-gunning article last week,

Different men have different opinions.

Some like haggles, some like hingsuns,

and those who prefer the "happle" to the "hingun," or vice versa, have equal claims on our space. We have now four or five continued articles in progress, (too many, we think, rather than too few); viz. the History of Boxing, Wrinkles for the Groom (occasionally); Coursing and the Greyhound; Soothsayer's "Review of the Racing-Season, 1845;" Coast-gunning and punting; Shooting Wrinkles; the Keeper's Tree; Foxhunting Views, (begun in this number); our Series of British Birds; the Gallery of Sporting Celebrities; add to these the promised serial illustrated articles on the Dog and Horse, and we really think, PROXIMITY FANCY will see that it is not "lack of argument" we labour under. His "fancy" shall find an early place, with many illustrations.

**A COVEY VOT SINGS.**—Apply to a music-seller, who will procure them for you.

**J. G. Millburngate, Durham.**—A complete set of "the Sporting World," which preceded this publication, is not now to be had for love or money, that we know of. People should not allow time to slip by, and suppose they can get a dozen sets of periodicals; we should be very happy to forward J. G. a set, or to buy half a dozen sets of the work ourselves. We have it in contemplation to reprint that portion of the History of Boxing which appeared therein in another form, to supply the demand of many subscribers to the present publication. All back numbers of the MAGAZINE are in print, except number thirteen.

**AUTOLYCUS.**—There was a tax, we believe, proposed in Pitt's time, for wearing a watch, but never carried into effect.

**M. B.**—Simon Byrne last fought Deaf Burke before his death.—To the second query: If A give B twenty yards in a hundred in a race, B has but eighty to run.

**SIBTHORP.**—Advertisements sent to the office (42, Holwell-street), accompanied by a P. O. order, or stamps to the amount, will be inserted. Charge 6s. for ten lines and under, 8d. per line beyond. The 1s. 6d. government duty on each advertisement is paid just the same by unstamped publications as stamped ones.

**E. F. Hull.**—The four teeth which are placed between the midding teeth and the tumes (two in each jaw), and which begin to shoot when the horse is four years and a half old, are called the "corner-teeth."

**A STABLEMAN, Liverpool.**—A windgall is an enlargement of a cyst, which contains an oil to lubricate the tendons over joints, and is produced by strain, or continued exertion. If situated above the fetlock joint on the hind legs, they usually cause a stiffness in that joint, thereby preventing the horse from carrying his legs sufficiently high to clear the ground; but we should say seldom to the extent of making the horse lame. The best application is a linen bandage put lightly round, and constantly wetted with a solution of nitre (saltpetre).

**ENTWISLE.**—I am an occupier of land, I find on my land some partridges' eggs which I took care of, and have succeeded in raising them to perfection; can I kill them without being liable to a penalty not having a licence? You will be liable to the penalty.

**ENQUIRER.**—What is the age of Jem Ward?—He will be 48, on the 25th December.

**S. J.**—It is a strictly legal question. To your second: Household furniture, &c., is liable to be seized for rent or taxes owed by your landlord.

**A BRUMMAGEN COVEY.**—We have answered your question three times at least. There is NO COMPLETE HISTORY OF BOXING, embracing the lives of the pugilists and their battles; nor has there ever been such a work published. "BOXIANA; or, Sketches of Pugilism," by Pierce Egan, is an unsurpassed "collection" of Ring doings; it goes no further than 1824. The first volume (partly compiled, we believe, by Smeaton) began with historical method; the others, except a duplicate fourth volume by Jon Bea (John Bedcock), have no plan or arrangement. The able Editor of BELL'S LIFE has given a succinct and admirably condensed history of the Ring in general in *Blaine's* "Cyclopædia of Rural Sports," and also in the Second Part of *Pistiana*. The "History" progressing in our columns is the first of its kind, and will be carried down to the present time.

**H. C. Cornhill.**—Of course: did we not give them during the whole of the spring and summer season. The larks (both *WOODLARK* and *SKYLARK*, have already appeared in Nos. 1 and 2 of the *SPORTING WORLD*, of which this MAGAZINE is a continuation), it would be absurd in the midst of the shooting season, both on land and water, to be busying ourselves with Chaffinches, Greenbirds, &c. Number THIRTEEN can be had (a single copy) at the office; but observe, as that number is scarce, several of the trade have been refused quantities, because they (knowing them to be short) speculate upon enhancing their price, by selling sets of the work, and therefore are anxious to buy them up. There are the tricks of all trades, H. C., and we merely husband No. 13 (which is reprinting), till we have a supply for those who wish to complete their sets. N.B. A complete set (No. 1 to all) can always be procured. We shall give a *TITLIZ* and *INDEX* at the completion of the volume.

\*\* "COURSING AND THE GREYHOUND" is postponed on account of press of matter.

## OUR WEEKLY CALENDAR.

**SUNDAY, January 4th.**—"On the 4th of January (1664)" says Pepys in his diary, "I went to the Tennis Court, [still standing in 1845.—Ed.] and there saw the King (Charles II.) play at tennis. But to see how the king's play was extolled, without any cause at all, was a loathsome sight; though he did sometimes play very well, and deserved to be commended, yet such open flattery is beastly. Afterwards I went to St. James's-park, seeing people play at *Pail-mall*." The most common memorial of this game, which has been long extinct, is the street so named, which was once appropriated to it, as was likewise the mall, running parallel to it, in the Park.

**MONDAY, 5th.**—Sherwood and Bingham Union Coursing Meeting (and 5th).—Morwell Ball died 1787, aged 25.

**TUESDAY, 6th.**—Burton Agues Coursing Meeting.—Ephphany.—TWELFTH DAY.—Horses may look rough, but don't cordial any, brood mares in particular. Work these less and less as their time approaches. Allow good ventilation to these, and to the used-up hunter and roadster, hurt in the wind. Avoid physic unless the bowels fill up inordinately, in consequence of stall-feeding and standing to his hay; but if you have training in hand, or some fleet one with early engagements, first loosen the hard gut with a mash or two, then give a small aloë ball (four drachms); and as soon as it is well set, you may increase each gallop a little, and thus improve his stretch. Softly does it best, for you must not expect to attain pace and lastingness all at once.

**WEDNESDAY, 7th.**—South Lancashire (Chalworth) Coursing Meeting (and 8th).—South Steeple Chase.

**THURSDAY, 8th.**—Glossop Coursing Meeting.—Union (Southport) Coursing Meeting (and 9th).

**FRIDAY, 9th.**—Nelson's Funeral, 1806.—

FIRE INSURANCES EXPIRE, so my all the All-my-knacks! Alas, if they do

expire, what will become of those insured? Admitting the *Britannia*, like the Brummagen metal tea-pot before us bearing her name, is hastening to the urn; that from want of circulation the *Globe* can never get round, and that the *Standard* deserts her conservative principles; that the *Parnassus*, though itself sunk down to ashes, won't come down with the dust for others in a like predicament; that the *Argus* takes a slight at the concern of its readers, while not a sight will it suffer into the concern itself; and that the *Sun*, thanks to some Phaeton, or Director in a phaeton, having lost his reckoning and being in want of a light, won't put out a fire. Even allowing such to be the limit of this terrible edict, admitting that there is still life in Life Insurance, we yet dread a general chill from the want of a guard to keep us from the fire. Years back and over friend Smith might have heard from his place in the front row, what some hundred and odd other Mr. Smiths might from various quarters, the pleasing announcement "that Mr. Smith's house is on fire;" and does our friend, losing his wits, his price, his place, and the piece, rush out in a flame with anxious inquiries as to his dear Hemma and the tin canister? Not he! He's insured to the full amount—it can't hurt him any-how.—He keeps his seat and his temper like a philosopher, stops for the after piece, sees the Miller and his Men blown up without wincing, then adjourns for a drift to the Coal Hole, and at length turns for home, humming "The man that couldn't get warm." Well, the report's too true—in his absence at a place of amusement, the family have been having some amusement at his place, by making a Wonderful Lamp of the premises, and creating "for that night only" an immense attraction.

**SATURDAY, 10th.**—Royal Exchange burnt, 1838.—GARDENING.—Now begin to plant your Jokers, and dig under the fourth rib to make them tell. Sow tarax in last year's Coddingtons, and prune comic songs for evening parties. Ladies may begin to set caps for summer beaux, choosing a warm sunny border. Frame canons for crusty landlord, and if you want to get a rake begin by laying out a bed. Drain your purse to grow knowing, and look out acquaintances for Sunday's dinner.

**NOTES OF A NATURALIST.**—The shrill cry of the early fisherman begins in the cold mornings of this month, and at twilight the clamorous notes of the crevins boy's bell are occasionally heard in the quiet solitude of the suburbs. The common bat may be noticed on Clapham and other commons, fitting between wicket and wicket, and invariably in company with the Field Cricket.

## The Sportsman's Magazine.

## THE KEEPER'S TREE.

(Continued from page 496.)

IN resuming a subject interesting both to the sportsman and the naturalist, I shall first despatch the more common of the four-legged vermin.

**3. THE MARTEN.**  
though seldom found, except in forests or the most extensive woodlands, is a most destructive creature. It lives chiefly in trees, and often resides in an old magpie's nest. They may be caught in traps, set on wattled hedges, and baited with eggs; and may occasionally be taken in the traps already described.

**4. THE POLECAT.**  
This animal, not unlike the ferret in shape, is of a deep brown colour, and nearly the size of the marten, measuring nearly two feet from point to tip. This is another very great enemy to the game-preserver, and may sometimes be caught by the side of a pond. It is very nimble, and few of the smaller animals can escape it. It is common in most of our preserves; generally preys by night; and is so shy as seldom to be seen. The polecat, or founnart, is also to be taken in traps already described.

**5. THE STOAT, OR ERMINE.**  
The next on our list, and most frequently met with in England of all the four-legged vermin, is the stoat. Like the weasel—for which it is frequently mistaken, and which it resembles exceedingly in shape and colour—is one of the most troublesome of the keeper's enemies. The stoat is, however, much the larger, measuring from fifteen to sixteen inches, while the weasel seldom measures ten, but the chief distinguishing mark is the black tip at the end of the tail of the stoat. Unlike the weasel it seldom approaches the habitation of man, but chiefly confines itself to the hedge-row and the wood. He destroys not only for the satisfaction of appetite, but to glut his natural propensity to blood. His activity is amazing; the highest tree or wall are easily accessible to his varied powers; and in grace and agility he is more than a match for the squirrel. I have seen a stoat roll the eggs from a pheasant's nest before him, into different rabbit or rat holes, rather than pass them by; and have known them kill both leverets and rabbits, draw them beneath the long grass or weeds, and quit them again, in search of fresh victims, without staying to eat a morsel of the flesh. There is a vulgar error in existence, as to their "sucking the blood" of the things they kill; but they do not do so, and only give colour to the charge by the fact, that nature and practice have taught them to bite at the spine or jugular vein, as the spot

most productive of a speedy and fatal result. The favourite portion of their prey is the eye and brain; in nine cases out of ten they touch no other part.

The Hon. Grantley Berkeley, in a paper on the subject of Vermin, says, "At Cranford, I was standing between two covers, accompanied by large deer greyhound, called Smoker, who acted as a retriever; and I saw a stoat crossing the grass field between the two covers, with what appeared to be a young rabbit in her mouth. Being at too great a distance for a shot, I sent Smoker after the stoat, when, to my surprise, instead of dropping her burden, she redoubled her efforts to escape with it; but at last, when the mouth of the dog almost touched her, she threw down her load, doubled between her fore legs, and endeavoured to return to the cover whence she came. Smoker turned her several times, but, from his immense size, and her activity, he could not catch her; however, the delay occasioned by the course brought me within shot, and I killed her, just as she had reached the cover. Having discovered that she gave suck, I then proceeded to ascertain what the burden was that she had been carrying; the grass was as smooth as velvet; but though I searched the spot minutely, it was long ere my researches met with success. At last, lying *perdu* in the bottom of the impression of a horse-foot, and looking-up, yet not daring even to wink its sharp black eyes, I discovered a young stoat, alive and well, which his mother had been in the act of transporting to some new nest, when interrupted by me. Having secured the juvenile delinquent, I reared him tame; and, for a year or so, he was a subject of the greatest curiosity. He ascended the dinner-table every evening at dessert for his sponge-cake, astonished the cloth by bathing in the finger glasses, and committed so many graceful antics, that he grew to be a great favourite. To dogs he never could be reconciled; and, when asleep in his cage, if one was brought to the door of the room, he instantly detected his vicinity, and commenced hissing and chattering. One day, in Lower Berkeley-street, Portman-square, he was frisking about the room, and, to my horror, went best pace up the chimney. Bells having been rung, and servants despatched to intercept his egress to the roof, and nothing having been seen or heard of him for nearly an hour, I was agreeably surprised by the descent, from the chimney to the hearth, of a bushel or two of soot, from the midst of which, after some struggling, the stoat put forth his astonished nose, and, in the way of punishment, was instantly delivered over to his cage. Had I continued to feed him on bread and milk, I have little doubt but that during his life he would have remained tame. However, the desire to witness the combat between a huge house-rat and the stoat overcame my better resolution, and I turned them loose together in a room. The stoat, after no fight at all, very soon, by a sudden spring and unerring bite, slew the rat, and, in the way of reward, I permitted him to eat the brain. After this, it seemed as if Nature had found the key to her legitimate propensities, and the stoat became as morose, intractable, and savage as if he had been bred up in his native wilds; biting at me and at everybody else, and acknowledging no master. During the ensuing winter, I believe, he was not kept warm enough; for, one morning, he was found dead in his cage."

The stoat is an animal very susceptible of cold; and though a cotton bed, and all the enclosures of the sleeping-room of the cage, are at the animal's disposal, nevertheless, during the winter, the cage should be kept in the warmest corner of the house. The trapper very often finds the stoat in his live-catching trap, dead, simply from exposure to the weather.

#### 6. THE WEASEL.

The weasel, which is the smallest of the whole tribe, is most frequently found about hen-roosts and dove-cotes, is a great devourer of the eggs of all birds, and, I need hardly add, a most obnoxious enemy to the sportsman. Its only good is clearing the premises of rats, to which it bears a great hatred. Both the stoat and weasel are of a deep reddish colour, with white stomachs, the weasel rather the lighter.

An infallible method to catch the weasel or stoat, is to plant a small square trap, covered with mould, in a dry ditch, or any place they frequent, and bait with a small bird, the tail feathers of which have been dipped in tincture of musk. I never knew this fail. They may also be poisoned with sal-ammoniac mixed up in a ball with flour and honey.

#### 7. THE FOX.

However we may love and advocate that noblest of all Field Sports, fox-hunting, we cannot deny that the common fox is a great enemy to the game preserver; yet the sport he affords to the huntsman so far counterbalances any damage he may do to the shooter, that the keeper's gun must never be levelled against him. Thanks to the good feeling that exists among sportsmen and farmers in most counties, we seldom hear of the fox falling by gun or trap. Still there are enemies who, while they dare not avow their spite, commit vulpecide secretly, and we have known keepers who could not control their antipathy to reynard. Formerly foxes were so plentiful in Northamptonshire, in the country hunted by the Fitzwilliam hounds, that seven shillings could be obtained for every dead fox, and great was the havoc committed in the sheep-fields. Now, however, nothing of this kind is heard of. After all reynard does not destroy all the game that is laid to his charge; give him plenty of rabbits and he will content himself with a chance visit to the hen-roost and pheasant-preserver.

#### 8. THE BADGER.

The badger is commonly accused of destroying game, and is usually destroyed by the keeper. Their chief food, it is true, consists of roots and insects, yet as I am certain that they will eat young rooks which have been blown out of their nests, and of which they appear very fond, I am inclined to think that they will devour other young birds. Though formidable when attacked, this is a harmless animal, rarely provoking the contest.

#### 9. THE HEDGEHOG.

Last on our list is the hedge-hog, and there appears to be very great doubt whether this animal is a destroyer of game or not. I never saw one in the act of killing or devouring any animal, but as I have frequently taken them in traps baited with eggs, I have little doubt that if they do not destroy the young birds, they devour the eggs.

The proper way to set a trap baited with an egg, is to dig a square place (in the bank or wherever you intend to set your trap) the size of trap and handle, raise a little bank about six inches high round the trap about six inches beyond it, and place the egg against your mound, so that the bird or animal, to reach the egg, must tread on the plate of your trap. Place no mound in front of the trap near the handle, but leave it open for the animal to walk in.

The common snake and adder should also be destroyed wherever they are met with, as they are very destructive to both eggs and young birds.

As we have expressed an unfavourable opinion of the hedgehog, it is but fair to bear both sides, we therefore extract the following vindication of this prickly customer from Mr. Bell's admirable "History of British Quadrupeds":—

"The food of the hedgehog is very various; it is, however, certain that it lives by preference upon animal food, though it will readily eat many vegetable substances. Its usual aliment is insects, worms, slugs, and snails; but it goes higher in the scale of gastronomic enjoyment, devouring frogs, toads, mice, and even snakes. The mode in which it attacks the latter animals is given in a manner worthy of the good old historian of Selborne himself, in a communication of my friend Mr. Broderip, in the first volume of the Zoological Journal. The experiment was made by Professor Buckland, and is thus detailed:—'Having occasion to suspect that hedgehogs, occasionally at least, preyed on snakes, the professor procured a common snake, and also a hedgehog, and put them into a box together. Whether or not the latter recognised its enemy was not apparent: it did not dart from the hedgehog, but kept creeping gently round the box; the hedgehog was rolled up, and did not appear to see the snake. The professor then laid the hedgehog on the snake, with that part of the ball where the head and tail meet downwards, and touching it. The snake proceeded to crawl—the hedgehog started, opened slightly, and seeing what was under it, gave the snake a hard bite, and instantly rolled itself up again. It soon opened a second, and again a third time, repeating the bite; and by the third bite the back of the snake was broken. This done, the hedgehog stood by the snake's side, and passed the whole body of the snake successively through its jaws, cracking it, and breaking the bones at intervals of half an inch or more; by which operation the snake was rendered motionless. The hedgehog then placed itself at the tip of the snake's tail, and began to eat upwards as one would eat a radish, without intermission, but slowly, till half the snake was devoured. The following morning the remaining half was also completely eaten up.'

"The fondness of the hedgehog for insects occasions it to be kept in many houses in London for the purpose of ridding the kitchens of the innumerable hosts of cockroaches by which they are infested, and also renders it useful rather than noxious to the gardener and the farmer. Sir William Jardine, however, mentions their fondness for eggs, and states that they do considerable mischief by destroying game in the breeding season, and that they will even enter a hen-house, and turning the hen off her nest, proceed to devour the eggs.

"That the hedgehog therefore is no less an animal-feeder in fact, than related to the insectivorous group by its zoological characters, is thus sufficiently proved; but, as in many other cases, it is not so exclusively restricted to one description of food, as to be at all inconvenienced when obliged by circumstances to resort to a different one. Thus it will not only feed readily on soaked bread or dressed vegetables when in a state of confinement, but in a more natural and free condition, when turning up the ground, probably in search of worms, it will eat the roots of grass or other plants; and in a garden will eat the ripe fruit which falls from the trees. 'The manner in which they eat the roots of the plants in my garden,' says White, 'is very curious: with their upper mandible, which is much longer than their lower, they bore under the plant, and so eat the root off upwards, leaving the tuft of leaves untouched.' There is an ancient prejudice still prevailing amongst the common people throughout this country, that it sucks the cows during the night, thus disappointing the milk-maid of the expected repletion of her morning pail."

Other curious stories are told of the hedgehog equally absurd. Pliny says that the hedgehog climbs fruit trees, shakes down apples, then rolls on them and carries them off on his prickles! Ælian tells the same story, substituting figs for apples. The traditional libels of many animals are mere old wives' tales. In our next we shall nail sundry winged vermin to "THE KEEPER'S TREE."

## GALLERY OF SPORTING CELEBRITIES.—NO. IX.

THE MOST NOBLE HENRY SOMERSET, DUKE OF BEAUFORT.

The family of Somerset is descended from "Old John of Gaunt, time-honoured Lancaster," and his second wife, Catherine Swynford, who had previously lived with him as his mistress. The children who were born previous to their mother's marriage were subsequently declared legitimate by an act of Parliament. They and their descendants bore the surname of Beaufort, and were ennobled under the titles of Earl of Somerset, Marquis of Dorset, and Duke of Somerset. The legitimate male line having become extinct in the time of the wars between the houses of York and Lancaster, Charles, a natural son of Henry Beaufort, third Duke of Somerset of this family, assumed the surname of Somerset; and having married the only child of William Herbert, Earl of Huntingdon, he was created Baron Herbert, of Ragland. In 1514 he was advanced to the dignity of the Earl of Worcester by Henry VIII., and died in 1526. Henry, the fifth Earl, was created Marquis of Worcester in 1642; and in 1682 one of his descendants was further advanced to the dignity of Duke of Beaufort. The present Duke, who was born on the 5th of February, 1792, succeeded to the title on the death of his father on 23rd November, 1835. So much for pedigree; now for performances.

The Duke of Beaufort—Marquis of Worcester previous to the death of his father—was placed when a youth under the care of the Rev. Dr. Fletcher, vicar of Dalston, near Carlisle, and his fellow-pupil was Sir James Graham. One of his earliest sporting performances was in the toxophilitic line;—when shooting, wide of the mark, he nearly knocked out one of the eyes of Miss Fletcher, the daughter of his tutor.

Born to the highest title it is in the power of a British Sovereign to bestow, and to a splendid fortune, more than adequate to the support of such rank, the Duke of Beaufort might have followed the example of many of his lordly allies, and have revelled in the luxuries of home, instead of encountering the comfortless and perilous duties of a foreign campaign. But as he had selected the life of a soldier, his place was the post of one, and in his capacity of aid-de-camp to the Duke of Wellington, he brought over his chieftain's despatches in November, 1813, detailing the brilliant passage of the Nivelle. On the restoration of peace and subsequent reduction of the army, his Grace retired from it. He was one of those denominated the '*elegant extracts*,' of the 10th Hussars, and his leaving the regiment has been attributed to this circumstance, that it having become proverbial that the *Tenth didn't fight*, it did not suit his Grace's character to remain any longer a member of it. It would be folly to deny that the earlier portion of the Duke of Beaufort's life has not been marked with a few youthful indiscretions; but, as his subsequent conduct has fully atoned for them, it would be indecorous to enter into a detail of them now.

One circumstance, illustrative of the estimation in which he was held

by those who were acquainted with him, is related by Nimrod, in his letters. Some years back, during the life of the late Duke of Beaufort, a discussion arose at the New Club, Melton Mowbray, as to who was the most popular man in society in England; when, after some debating, the Marquis of Worcester was universally allowed to be the man.

The Duke of Beaufort has always been an ardent sportsman, and especially fond of the "Road." As an amateur, he also patronised the Ring. What his Grace may have been with the gloves we cannot say, but this we know, that when he drove those celebrated Brighton drags, the "Criterion," and the "Age," he was a capital performer with the ribbons. The following little anecdote will show at once his kindness of heart, and passion for driving. Shortly before that celebrated coach, the Southampton "Nimrod," was taken off the road, his Grace, who was driving it, heard from Mr. Apperly, (NIMROD) who was sitting beside him on the box, that, from the heavy expenses and light earnings of the coach, it was feared that John Peer, the proprietor, must drop it. This information much perplexed the kind-hearted nobleman, who asked immediately, if it could not be made a subscription one, like the Exeter coach. That course being determined upon, his Grace whispered into Peer's ear, while coupling his leaders at Hounslow, that he would give him a draft the next day, for 300*l.* which he did. In 1819 he appeared on the turf, with three race-horses; and in most subsequent years his name is to be found in the Racing Calendar, as the owner of a nag or two, but none of any great note. It was not until the death of his father, and his succession to the title, that the character of the Duke of Beaufort was brought fully before the public, when, unshackled from the struggles which even an elder son is sometimes obliged to make, the accession to his patrimony displayed his genuine nature in its own magnificence. He then became, to its fullest extent, as before he had been to a limited degree, the patron and protector of art, in all its manifold professions; and, in his special patronage of the stage its votaries had looked to his Grace's acceptance of the office of Lord Chamberlain to resuscitate the decaying drama. The Duke of Beaufort's splendid pack of hounds, with their excellent huntsman, Will Long, are too well known to comment upon here. His carriages are always remarkable for their elegance, and the neatness of their appointments. On the Queen's birthday, in particular, he vies with the Earl of Pembroke, to produce the handsomest turn-out of the season. His hospitality is unbounded, and his splendid mansion in Arlington-street, and his magnificent seat, Badminton, Gloucestershire, are always full of guests, composed of the highest personages in the land, whom he entertains with princely liberality. The meet of his Grace's hounds on the lawn, in front of Badminton House, is not unfrequently attended by two thousand persons, all of whom are offered refreshment. The Marquis of Worcester, heir to the dukedom, at present in the Life-guards, is much liked, and bids fair to tread in his father's steps.

The Duke of Beaufort, before he came to the title, represented the borough of Ludlow in Parliament, but in the first election after the Reform Bill, was defeated by Sir B. Hall, by a majority of 38.

The Duke of Beaufort has been twice married, first to Georgiana Frederica, second daughter of the Hon. Hew Fitzroy, by whom he has two daughters, Lady Augusta, and Lady Georgiana Somerset; and secondly, on the 29th of June, 1822, to Emily Frances, daughter of Culling Smith, Esq., by Lady Anne Welleles, by whom he has issue the present Marquis of Worcester, and six other children.

## COAST-GUNNING AND PUNTING.

(Continued from page 509.)

HE subject here resumed, will doubtless interest many of our inland readers, whose "local habitation" precludes the possibility of their ever witnessing the patient watchings of the coast-shooter, stationed on the slimy ooze of ocean's shore, or the perilous navigation of the punt-gunner in his frail shallop. Few among us but delight to read of sea-adventures, and the rigours and hardships encountered by the hardy boatmen who seek profit, and the enterprising sportsmen who seek recreation and find health and muscle-bracing excitement, in the pursuit of the wheeling squadrons of aquatic birds, driven in countless myriads by icy winter from their arctic homes, cannot fail to interest and edify them.

In the last paper we gave the figure of a Hampshire Shooting Punt, with its stanchion-gun, paddles, &c., we here present the reader with a POOLE CANOE, together with the appliances, also on the authority of the admirable work of Colonel Peter Hawker, whose love of sport, we doubt not, will more than pardon our borrowing, in consideration of the gratification and instruction we impart to many thousands, to whom his elaborate and expensive work is, of necessity, a sealed book.

The Poole Canoe is built sharp at both ends, on the plan of the Greenland whale-boat, except being so flat at the bottom, as to draw only two or three inches of water, and so light, as to weigh only from one to two hundred pounds. This canoe, although built for other purposes, is, on the western coast, generally preferred, for shooting, to one of any other kind. It is used, both by day and night, at low water, and you manage it thus:—

Sit down, on some straw or rushes, with your gun by your side, and a Newfoundland dog abaft. Cruise about, till you can see or hear a flock of wildfowl on the mud, and when you have rowed within three or four gun shots of them, take in your oars, and reconnoitre the creeks. Having ascertained which is likely to be the best, lie down and push along with a stick (called a set), and, from the mudbanks standing so high above the channel, you are so completely hid, that you will seldom fail to get a shot, provided there is a creek withing reach of the birds' and you do not go directly to windward of them. The decoymen (see Number 32, Article DECOR) can go to windward of the birds, by means of the smoke from a piece of dutch turf, or common peat, which, after having it well dried, they are able to carry lighted in the hand for the short time that is required to drive the wildfowl into the pipes. Another recipe, of which some pretend to make a great secret, is a paste of cowdung and chopped straw; but, before this will ignite properly, it must be baked in an oven for about thrice as long as the time required for making bread.

All these things may answer very well behind the screen of a decoy; but in a canoe, or punt, the fire could not be so easily concealed, and there would be some danger in lighting it where one, without a retreat, was sitting on straw with gunpowder in his pocket. The burnt turf, &c., may be used with success by a person walking behind the high banks of a pond or river, who may light it, when required, by carrying a common lucifer match-box.

On arriving sufficiently near, should the water be so low that you cannot present your gun at the birds without kneeling or standing up,

you must get aground at the side of the creek, or steady your canoe by means of running one or both oars from between the thowls into the mud, otherwise the recoil of the gun will set her rocking, and, probably, tip you out. Having made all fast, rise up and fire, either sitting (at the heads of the first birds) or flying; and then put on your mud pattens\* (without which you would be lost to eternity), and assist your dog in securing the killed and wounded. The gunner here, generally calculates on bringing home the half only of what he shoots, from the difficulty of catching the whole of his winged birds, which he calls cripples, and those, that (to use the pigeon phrase) fall out of bounds, which he calls droppers. If birds fly up he generally declines firing, knowing, that the moment they are on wing they become so much more spread, that he could seldom get more than three or four, for which it would be hardly worth while to disturb the mud; particularly as widgeon, by night, if not fired at, will probably settle again at no great distance.

This sport is not so likely to fail as that of the punter; and the superior chances that he gets, often enable him to kill as many birds at a shot. He has sometimes a partner, who fires with him: this they call a double gun, and by such means frequently secure forty or fifty widgeon at a time.

The gunners' principal enemy is the curlew, which often springs up from the edges of the creeks, alarms the whole place, and sometimes prevent their earning four or five pounds.

In our next paper we shall generalize on the sport of WILDFOWL SHOOTING.

CANOE FORESHORTENED.

For a guide to builders, if ordered inland or abroad.

**DIMENSIONS** From A to A 12 feet, B to B 10 feet, Bottom (at centre) 3 feet 2 inches, Width (at ditto) from Gunwale to Gunwale 3 feet 7 inches, Height 11 inches at centre rising to 13 do. fore and aft, Weight (about) 200 lb.

N.B. Timbers yew or oak, bottom to be three pieces of elm an inch thick, each side one plank of elm half an inch thick.

Keep her dressed with pitch and tar all over the outside of her bottom, and as far as she draws water up the sides.

**DIRECTIONS.**—Push down creek (as per sketch) when alongside birds on mud, rise up and fire. If mud is too high for this, run canoe aground and stand up. If birds feed out of reach (and the night is not too bright for this) wait in a latch till the tide flows, then lie down close in canoe, and gradually push in with tide, let all be white, and birds will not be able to distinguish you from the water. Boat draws barely 4 inches of water with two men and a dog; the best size gun is from 13 to 18 lbs. weight.

\* Square boards, tied on to each foot, to prevent sinking. Vide figure in page 506, No. 33; where the letters E E should have been placed on the woodblock.

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 506.)

There is very little to be said of any of the performances before the Doncaster, but I shall be able to add a hint or two in recording them, which may render the description useful.

At the DEVON and EXETER, Aug. 20, a colt by Glaucus, dam by Comus (good blood), won two races; Subduer beat Fox for the Devonshire Stakes.

At TUNBRIDGE WELLS, Mr. Rolt's Hampton won the Eridge Stakes,

beating Alkali, Corinthian Tom, Satyr, and others; Lady Charlotte was second. Sylvanus, by Slane out of Gaiety, won the Ladies Plate. Tub Thumper beat Jew Boy; Corinthian Tom won a 3 sov. Stake, 30 added.

At ROCHE DALE, Obscurity was beaten by Betsy Bird.

At the PEMBROKESHIRE, Haverfordwest, that prolific provincialist Waterloo won three races, and Lady Charlotte one.

At PAISLEY, Aug. 21, Bretwalda beat Panjaub for the Trial Stakes, and for the Silver Bells. Mildred won the Borough Plate. Glossey beat Brevity and Ravensworth for the Glasgow Cup. The Paisley Cup was won by Mr. Merry's bay colt, John Harris, by Galewood out of Madame St. Clair, who also managed to hit the mark for, what are termed here, the Aftershots.

At STOURBRIDGE, Aug. 26, Princess Royal, by Harkaway, won 2 races. Reliance won the East Worcestershire; Lady Sarah the Stourbridge, and the filly by Glauca out of March First, two trifles.

At EGHAM, Aug. 26, once redolent of Royalty, and typical of our conquests over Tippoo Saib, whose tent was spread to shield patrician heads, and amuse, if not gratify, plebeian eyes—where George the Fourth was a frequent visitor, and which his late Majesty patronized—there is still left the beautiful sward, the winding Thames, and the swelling hills, there is still left what may be remarked as the good luck of a summer's day; for Egham Races almost universally come off in fine weather. I may, indeed, almost say with the Poet,

"Eternal summer gilds it yet,  
But all except that sun is set."

The New and Old Windsor Stakes were won by Elemi, beating some poor ones, and was claimed for 80 sovs.; John o'Gaunt won the Gold Cup, beating Wee Pet, Pic-nic, and two others. Satyr won the Members Plate, beating Subduer and another; Flatfish beat Velox for the Bunnymede.—Aug. 27, the Devil-to-pay won the Egham Stakes, was claimed, and parted with. He is good looking horse, but pulled up dead lame both heats. This is the horse that shot out at a great pace when Ugly Buck run for the 2000 Guineas. There was a beautiful race for the Surrey and Middlesex Stakes, between Pergularia, Devil-among-the-Tailors, and Pine Apple; the mare won it by a neck, and Pine Apple lost second place by a head. A capital race for the Amateur Stakes resulted in Master Stepney, (Count Bathany) beating Coal-Black-Rose, (Mr. Rolt,) and two others; it was a near thing, and lost perhaps by the riding being a "little too fine." For the Queen's Plate, Pic-nic went off at a dence of a pace, was never headed, and beat Wee Pet second, and John o'Gaunt third; Pic-nic and John o'Gaunt carried each 1st heavier than for the Cup. A poor attempt at a hurdle race with Mr. Greville's Trump and Strike-a-Light, against Mr. Heaketh's Canteen, was won by Trump. For the Fern Hill Hunter Stakes, the late Mrs. Theobald (at the last moment) handed over Woodbine, which she had been riding throughout the day, to Lord Glamis, and a good race ensued over two miles and five hurdles, between Woodbine, Kiss-me-now, and Eleanor; Woodbine came in first by three lengths. Elysium was named, but he refused the second hurdle, and was kept back till the return of the others, they clapped 12st on him. Lord George, Count Bathany, Mr. Rolt, Mr. Jaques, Lord Glamis, and very good company were there, and the Count was very effective in his canvassing for next year's subscriptions.

At HUNTINGDON, Ruff won two races; Prairie, by Terry, 5st 13lb, beat Hersey, 7st 4lb, for the Huntingdonshire Stakes; Event was beaten; Fama ran in three races but did nothing.

At HEREFORD, Aug. 27, Redstreak won two races; Blind Hooke, late the Bat, won the Hunters' Stakes; Tariff, once in great force here, lost both his races.

At STOCKTON, Aug. 28, but little more of interest happened than two races between 2-years-old, Fancy Boy won the 10 sov. Sweepstakes, beating the Hydra colt, by a neck after a good race. Curiosity, Lord George's, as usual took the lead, but could not keep it, and was third; Lady Abbess, Charcoal, Miss Georgie, and Monsieur Perrot, were altogether out. Thalia won the Cleveland Stakes, beating the said Hydra Colt by a head; Thernia, Miss Georgie, sister to Skipton, and Fiddle-string were behind. This being a selling race, and as the Hydra Colt was priced at 100l., you may readily suppose what sort of a lot they were. Xanthus won two races here, and Glossy and Flattery one each. Mr. Standish won the Cup with Little Hampton, and Captain Potts the Innkeepers' Plate, with Little Benton. There are some intervening provincials I shall deal of in my next.

The "GREAT" DONCASTER MEETING, as your sporting contemporaries have it, commenced, Sept. 16, with a race between two for the Fitzwilliam Stakes, in which Trueboy beat Little John "one to you, but I can't say many of them." Semiseria was beaten in a match for 200 sov., by Nottingham. The Champagne Stakes, 50 sov. each, for two years old c. and f., were won by The Princess Alice beating The Traverser, (I believe not in the Derby,) and Iago; Kismet, Malcolm, and Mr. Mansfield were next, and a lot comprising Sheraton, Free Lance, Prospect, Banana, Mr. Osbaldeston's Stockport filly, and the Peri colt, (all mentioned in your Almanac,) left behind. The Shadow beat Jinglepot for the Queen's 100 guineas. For the Cleveland Handicap a capital set-to between Godfrey and Knight of the Whistle ended in favor of the former. For a Sweepstakes of 500 sov., 3 subs., Ennui beat Tom Tulloch over the same course as the Champagne. A filly by Sheet Anchor, out of Valencia, won a plate of 50 sov., beating Sowerby and others. On the 17th the ST. LEGER was run for, and, with all that has been said of it, I must say that it afforded no matter of surprise to me. I had declared before the race that Fantasa, Mentor, Annandale, Mid Lothian, and Fitzallen could not fairly be expected to show in front; Weatherbit had no charms left for me, but of Old England I had some hopes. My own opinion, not a "prophecy" or "anticipation," was, that the mare, Miss Sarah, or an outsider, would win it. It was run in something less than three minutes and a half, and ended in favour of the Baron by a length; Miss Sarah second, and Pantasa third. There was an objection made to the Baron on the score of age. The horse

which ran was declared to be but three years old, and it is said to be difficult to tell the color of a colt to a nicety, as a yearling. The observation I am about to make may not therefore seem to be called for, but I cannot let the opportunity pass without remarking, that the Baron was entered for the St. Leger as a "bay" colt, and has run in Ireland, and been entered there, as a 'chestnut.' These sort of entries, being indiscriminate, are calculated to create doubt and suspicion; and as the horse came from Ireland, and there was but little previous opportunity afforded of seeing him, rendered it necessary to have the whole matter cleared up. It was never done as regards the colour, although, from the opinions I have heard expressed by several sporting men, a misdescription in colour would work as a disqualification. Valerian won the Selling Stakes, beating some middling ones like himself. The Municipal Stakes were shared by Lord Chesterfield and Col. Anson, and saved Arkwright and Borghese, the only two out of nine, the trouble of a race. On the 18th, My Mary beat Glossy, Trueboy, Jenny Wren, and others for the Scarborough Stakes. For the Three Year Old Stakes, Chertsey, by Touchstone, beat Weatherbit, who, nevertheless, ran gamely. Cartwright, riding Semiseria, won the Innkeeper's Plate, beating eleven, including Dean Swift, Queen Pomare, Flattery, and Comrade. In a previous race, by an odd turn, Comrade beat Mid-Lothian. Miss Sarah won the Park-Hill easily, beating Hope, Miss Elis, and As-you-like-it. The Two Year Old Stakes, 20 sov. each, c and f, brought out a filly by Velociped out of Garland, in competition with a good field. She won it by a length; Mr. Osbaldeston's Stockport filly second, and Malt third. In this race the Princess Alice was thoroughly beaten, and the following colts and fillies, (all enumerated in your Almanac,) left behind; Free Lance, Punch, Sister to the Devil-among-the-Tailors, (confound the name), Fancy Boy, Retriever filly, Fair Helen, Turpin, the Peri colt, Brother to Millepede, Tobacconist, Therites, and Prospect; the course is much longer than for the Champagne. Pam beat Mentor for the Gascoigne Stakes. Godfrey won the Town Plate, beating Jinglepot, Little John, and Flattery. Sweetmeat won the Cup, weight for age, carrying 7st, beating Alice Hawthorn, 9st.; Pantasa third, and Miss Elis fourth. Lord Harry paid forfeit to the Traverser. I shall have to mention the Garland filly again; she is now called Vanish—but your readers must not fail to keep her in sight.

#### HINTS FOR DERBY SWEEPSTAKES AND OTHERS.

##### THE DERBY

##### HORSES DISQUALIFIED BY WRONG NOMINATION.

Dolo—described as being by St. Martin, out of Lady; but it should have been by Galewood or St. Martin.

Erin-go-Bragh—described as being by Harkaway, out of Maria, by Sir Hercules; but it should have been by Harkaway or Ishmael. (See nomination for the St. Leger.)

##### DISQUALIFIED BY THE DEATH OF THE NOMINATOR.

Lord Westminster's b c by Touchstone, out of Laura.  
Lord Westminster's b c by Touchstone, out of Isabel,  
Lord Verulam's bl c Morocco, sold to Sir J. Gerard.

##### HORSES DEAD.

Col. Anson's Ardennes	Mr. Melkham's Abbotsford
Mr. Bell's Harpstring	Duke of Richmond's ch c by Elis
Mr. Collin's Redbreast	—Prism
Lord Exeter's b c by Colwick—	Mr. H. S. Thompson's Marine
Macremma	Mr. Watt's b c by Mulatto—sister
Mr. Gratwick's b c by Elis—The	to Baveno
Margravine	Mr. Webber's Esau.

##### SOLD WITHOUT HIS ENGAGEMENTS.

Duke of Rutland's colt by Slane, out of Voluptuary, now the property of Lord G. Bentinck.

##### GONE TO AMERICA.

Mr. A. Jodnson's b c Fireman | Mr. A. Johnson's St. George

##### THE OAKS

##### DISQUALIFIED BY THE DEATH OF THE NOMINATOR.

Lord Westminster's b f by Pantaloon, out of Languish  
Mr. Rawlinson's b f Cherry Bounce  
Lord Verulam's f by Sir Hercules, out of Duvernay.

##### DEAD.

Col. Anson's Ardennes	Lord Exeter's ch f by Beiram—
Mr. Wilson's b f Lady Teazle	Marinella.

##### THE ST. LEGER

##### DISQUALIFIED BY THE DEATH OF THE NOMINATOR.

Lord Westminster's b c by Touchstone, out of Laura.  
Lord Westminster's br. c by Pantaloon, out of Pasquinade.  
Lord Spencer's Titbit, now the property of Mr. Shelley.  
Lord Verulam's Morocco, now the property of Sir J. Gerard.

##### DEAD.

Ardennes	Marine
Lady Teazle	b c by Colwick—Macremma.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CREEK.

## CHAPTER XL.

JACK SCROGGINS,—(concluded.)

The only consolation Scroggins experienced, after his mind had overcome the shock of defeat, was in attributing his loss to an accidental blow he received upon the throat in the third round, and which swelled so rapidly as almost to deprive him of the power of breathing; nothing could satisfy his wounded feelings but another opportunity to retrieve his lost laurels. Turner, without hesitation, agreed to accommodate him, and Scroggins was so confident of victory, that he put down the principal part of the money himself, to make the stakes 150*l.* a-side, for a mill to take place on Tuesday, October 7, 1817. But the charm was broken—the invincibility of Scroggins, in the sporting world, was at an end—no longer a winning man his defects were now too prominent to be overlooked. A material falling-off was also observed at his benefit, and he was altogether so much reduced that the odds on the third contest were 7 to 4 against him.

During the time allowed for training, Scroggins, as in a former instance, unmindful of the necessity of paying the greatest attention to his frame, to render everything secure towards conquest, in an inebriated moment had an accidental turn-up with Bob Gregson at Belcher's. In this skirmish he went down, and sprained one of his legs so severely that he did not recover from its effects for upwards of a month; but, to make amends for the above indiscretion, so much did he fancy this match, that he sold his house, quitted the character of a publican, and became a private individual, "in order," as he observed, "to be more able to keep to his training."

His third battle with Turner was fought at Shepperton (which, as well as the former, will be found in the Fifth Period of this history, under the Memoir of TURNER); and, notwithstanding his contempt for regular training, Scroggins appeared in the ring in better condition than his opponent. It was evident to every one present, that Scroggy strained every point to win; and it is but common justice to remark, that his character as a boxer rose higher, in every point of view, on that day, than in any of his previous battles.

Poor Scroggy's course was now a downward one. He had survived his fame; and never heeding the cautions of precedence, he paid the penalty, which men in every profession, pugilism by no means excepted, must pay for disregarding her dictates.

He was successively defeated by Jack Martin, the opponent of Randall, see Period V), at Moulsey, on the 18th of December, 1818, after a game fight of 65 rounds and 122 minutes; by Josh. Hudson, at the same place, August 24, 1819, in 11 rounds, occupying 18 minutes; and twice by David Hudson, the first time in May, the second in July, 1820.

Scroggy, however, was still game, and ready for anything. And determined, as he himself said, "to lick somebody afore the year was out, perceiving he could get backers," Jack looked in on the 30th of November, 1820, at a *spread* given at Randall's, in Chancery-lane, by sundry pugilistic amateurs and patrons of the fistic art. Spring, Purcell, Randall, Turner, Martin, Phil. Sampson, the late Harry Holt, and others were among the guests, and the patter turned on battles past and matches to come. A swell observed, that "if he could be got into condition, he should like to see a mill between Holt and the old Tar, on account of the contrast of their styles." Holt expressed his approbation of the proposal, and six weeks was mooted as the period. Jack, always rough and ready replied, "Why, as to that there matter, 'tain't no match between me and Holt; I can lick him like a baby. I never was so ill with a cold in all my born days; but as to time—why I'll fight him any time you like, even now, bad as I am." Holt returned Scroggins thanks for his candour; but, in return, thought Scroggins would have no chance, "however," concluded *Cicero*; "far be it from me to aggravate the gentlemanly sort of man's impatience; I too think, if it can be managed, there's no time like time present." "I'm ready," retorted Scroggins; "but the winner shall have the whole of the purse." "And I am agreeable," replied Holt. Ten guineas were quickly posted, and the usual preparations were made for the contest. Turner and Martin seconded Scroggins; Purcell and Sampson were for Holt. Spring was time-keeper. Five to four on Scroggins, on one side of the room; and five to four on Holt, among the other party.

## THE FIGHT.

1. The attitude of Holt was elegant, and he appeared also difficult to be got at. Scroggins was not long in commencing his favourite rush, and he bored in upon his opponent till he absolutely ran down Holt in the corner, and fell upon him.

2. This round was all fighting; and the wistly-casters flew about till both went down, but Holt undermost.

3. The fine science of Holt here told; and he planted two nobbers with his left hand without any return. Scroggins, however, went in upon the old tack when, after some exchanges, Holt got him down.

4. After some exchanges of blows upon their nobs, the combatants closed, and Holt weaved his opponent in the Randall style. Scroggins got the throw, and Holt was undermost.

5. The left hand of Holt told severely, and Scroggins went away with the force of the hits. Both down.

6. Scroggins rushed in on Holt, but, in making a hit he missed his opponent, and fell. He immediately got up, and said, "Gentlemen, I beg your pardon; I could not help it."

7 and 8. Nothing else but fighting—giving and taking without finching, till both went down. "Bravo!" from the Finks, "it's an excellent fight: Both are good men; and Jack's as good as his master." Scroggins seemed rather touched in the wind, and he gave a loud hem.

9. Holt, in this round, was everything. He gave Scroggy three facers with out any return, and also hit him down. "Scroggy, he'll spoil your beautiful mug if you don't take care."

10 and 11. Two slashing rounds. In the last, Scroggy went down from a slip. Ten minutes had elapsed.

12. Holt, after making a slight blow, slipped down. Six to four on Holt.

13 to 15. The blows of Holt were not effective, so as to take the fight out of Scroggins. It was hard milling in all these rounds. Scroggins said to his seconds, "Don't water me so much; it's all right; I can't lose it."

16. Holt's left eye was rather damaged, and the claret had made its appearance on his mug. This was a tremendous round, and Scroggins threw Holt; but he behaved handsomely to his fallen opponent,—instead of falling upon him, as he might have done, he walked away. "Brave; you are a good little fellow."

17. Scroggins's nob was a little changed, and he again received two facers Scroggins also went down.

18. After an exchange of blows, Scroggins laughingly observed to Holt, "If you don't hit harder, my boy, you can never win it." Both down—Twenty minutes.

19. Sharp fighting; but Scroggins went down. Here Randall took some brandy to Holt, and gave him advice. "How many seconds are there to be?" said an amateur. "If there are forty it will make no odds," observed Scroggins.

20. In this round, Scroggins received a severe hit on his throat; two facers were also added to it; but he would not be denied, and scrambled his way in till they both went down.

21. Scroggins now began to wink, and he was as much distressed as an old worn out, broken-winded post pad; he, however, got Holt down.

22 and 23. "Go along, Harry, it's all your own; he'll not come above two more rounds." The left hand of Holt did some execution, and Scroggins had now the worst of it.

24. This was a tremendous round. Scroggins went to work like a blacksmith hammering at a forge, and bored Holt into a corner. Hit for hit was exchanged, till they both went down; but Holt was undermost, and the back part of his head came in contact with the window-seat. "It's all up," and Martin offered 15 to 10.

25. Holt was quite an altered man, and he seemed stupified from the effects of the fall. The whole of the falls throughout the fight were heavy indeed. When time was called, Holt came to be scratch with great difficulty. Scroggins down, and undermost.

26. The science of Holt was much admired; and, although terribly distressed, he put in two facers before he went down. "He's nothing else but a game man," from all the swells.

27. Holt got better, and Scroggins, in going down, was undermost.

28. It was not yet safe to Scroggins. Both down.

29. This round was severely contested; but the heavy fall Holt received shook him all to pieces. 10 to 5 on Scroggins.

30. Holt was game to the last; he exerted himself, and got Scroggins down.

31. Scroggins was very much exhausted, but the fight was not out of him and he came up first to the scratch. Both down. 10 to 3.

32. It was evident Holt could not win, and he was sent down in an instant 10 to 1.

33 and last. Holt was sent down, and his second could scarcely get him or his knee. When time was called, the Birmingham Youth said he should not fight any more. Scroggins immediately came up to Holt, and said, "Harry, give us your hand; you are a good fellow, and here's a guinea [for you!]" Great applause from the swells, and "Jack, you shall lose nothing by your generosity and feeling."

For two men out of condition, nay, both unwell, particularly Scroggins, it was a much better fight than has frequently been seen when boxers have been in regular training. Scroggins had still some tremendous points about him, and the old tar's rambling hardy made of boring in, told severely at close quarters. It was a gallant battle on both sides; but the blows of Holt were not hard enough to stop the rush of Scroggins. The accident Holt received in the 24th round, perhaps lost him the fight; he also complained of a sprained thumb before he commenced the battle. In a ring some of the amateurs thought Holt might have stood a better chance. The smiles of victory, which had now been familiar to Scroggins in his last six battles, seemed to give him new life. It was an out-and-out concern altogether; and the patrons of the science, manliness, and true game had a treat.

This flash of success, was followed by another gleam of sunshine

Scroggins found backers, and was pitted against Joe Parish the Waterman, who having beaten Davis, Harry Holt, and Laashbrook, was thought a promising plant, in spite of his having fallen beneath the all-conquering arm of the Nonpareil, Jack Randall. Banstead Downs, in Surrey, on Saturday, March 3, 1831, were the spot and time, and fifty guineas the sum; it was the second fight on the above day. The rain was pouring down in torrents when Scroggins appeared and threw his hat into the ring, attended by Randall and Paddington Jones as his seconds. Parish showed soon afterwards, followed by Spring and Harmer. Both men appeared in excellent condition. For one hour and a quarter, the rival pugilists exerted themselves in the highest style of courage to obtain the victory. The changes were frequent indeed; 2 to 1 on Scroggins—3 to 1 on Parish—3 to 1 again on Scroggins—then other changes. In the 52nd round, from the distressed state of Parish, Randall threw up his hat, as it did not appear that Parish would be again able to appear at the scratch. He, however, recovered, and fought till the 69th round; but, in the last three rounds, it was a hundred pounds to a farthing in favour of Scroggins. The latter behaved extremely well, was remarkably steady, and reminded the spectator of his best days. He was, however, terribly punished. The greatest anxiety prevailed among the old fanciers, who were more than friendly in their good wishes towards their old favourite. In the second round, Scroggins fell with his shoulder against one of the stakes, (which circumstance was not known to the spectators, and operated as a great drawback to his exertions.) Had not this accident happened, Scroggins thought he could have won it in much less time. Parish was punished but little about the head; yet he remained in a state of stupor a short time after the fight was over; and Spring carried him in his arms, out of the ring. Parish displayed a great deal of game, and suffered very severely from heavy falls. If Parish had gone in to fight first, he might have given a better account of the battle. Spring this day convinced the amateurs he was entitled to their praise, not only as a most attentive second but as a most active one; and it would not be doing common justice to the anxiety and exertions he displayed to make "ould Jack" win, to pass them over without notice.

On the Thursday after the above fight, at Josh. Hudson's benefit, Parish addressed the Court, observing, "that although he had been defeated by Scroggins, he was not satisfied, and was ready to have another trial." Scroggins, in reply, said, "from the advice of his friends, he had not intended to have fought any more; but as how he was too much of a gentleman not to accommodate Mr. Parish, who was also a gentlemanly sort of a man; so he would give him another trial." A guinea a-side was deposited; but on the arrival of the night to make the stakes good, Parish did not make his appearance, and the guinea, of course, was forfeited.

This sunshine, however, was evanescent, and the course of Scroggins's history tends henceforth downwards. In April, 1822, as related in the life of Tom Belcher in page 285 of this HISTORY (No. 14 of SPORTSMAN'S MAGAZINE), the hardy hero came in contact with the scientific Tom; on this occasion if Tom was stale Scroggy assuredly was but a shadow of his former self, and he was moreover in that state of lush which had now become almost habitual to him. Still, however, "ould Jack," as he was already called, haunted the ring at every mill of note, unable to quit the arena of his many triumphs; and the milling "spirit strong within him," was shown on the 12th of June, 1822, at Mousley-hurst. On that occasion the fights between Ward and Acton, and Burke and Marshall, having gone off unsatisfactorily to the patrons of boxing there and then present, a brace of countrymen offered themselves for a purse and had actually "peeled," when Scroggy roared out, "Gentlemen, as you've had but little fun to day, suppose I fight the Gipsy, that will produce sport?" Cooper instantly replied that he was ready; and the extemporaneous mill quickly commenced. Scroggins was seconded by Harry Harmer and Bill Eales, Abbot and Turner picked up the Gipsy. In this battle the rash and hardy little Tar, showed the folly of entering the ring out of condition. He was full of oranges, ginger beer, and heavy wet, taken as antidotes to the heat of the day, and as unfit to fight as stall fed ox; nevertheless he came up to sent down for twenty-five minutes, during which seventeen rounds were fought; Scroggins was at length persuaded to leave off; he afterwards observed, "he could not win but wasn't half-licked." This was our hero's last appearance in the P. R.

Poor Scroggins now became a mere hanger-on of pothouses: a droll, diverting vagabond, occasionally picking up a few shillings as second, or receiving precarious assistance from those who had known him in more prosperous days. Among these Cribb was long his friend, and "wittles" (for which Jack had an inordinate penchant, until brilliant Juniper utterly destroyed his digestion) were often set before him from the larder of the generous host of the Union Arms. Occasionally, too, Jack would get in office as a waiter at one or other of the Sporting Houses; but his invincible love of liquor soon lost him these temporary asylums. The EDITOR of BELL'S LIFE IN LONDON, by frequent generous appeals, and taking Jack's name as the comic pseudonyme for innumerable admirable burlesque poems on public affairs, political, and pugilistic, kept the once formidable pugilist, now the poor pothouse buffoon, from actual starvation.

May the example of John Palmer have its proper weight with every

man whose physical capabilities lead him to adopt pugilism as a profession, and enforce the truth—that no constitution, however good, no strength, however superior to that of ordinary men; no amount of courage, no degree of determination, can supply the want of caution, of attention to training, of prudence, of moderation, and, in short, of steadiness of conduct, and becoming behaviour in and out of the ring. This is the deduction which every attentive reader of this history cannot fail to draw from a perusal of the lives of our most eminent boxers; that in the Ring, as in every other pursuit, honesty of purpose, self-denial, and sobriety are indispensable—at least while engaged in struggles to attain distinction.

Scroggins departed this life on the 1st of November, 1836, in extreme poverty, having not quite completed his 49th year.

#### HOW TO PURCHASE A HUNTER.

ON all sides, we hear of retrenchment and the hardness of the times, and even at the street corners our eyes are greeted with exhortations to "reform our tailors' bills," seriously, why should we not endeavour to introduce economy into the hunting stable? Let not any one imagine that I am about to offer hints calculated for those who keep regular hunting grooms; enough has already been written on that subject by a far more able pen. I only address myself to "detrimentals," and other poor men, who have a desire to indulge in the sport of fox-hunting; and, in the first place, I must beg of them to discard the idea, that everybody who pursues this diversion must do so at a ruinous expense. No; I will undertake to say that a good horseman and judge of horses may see as much hunting as any provincial country can afford, at a comparatively very trifling cost. This may be effected in two ways: first, by making raw colts into accomplished hunters; secondly, by riding "screws," and other low priced horses; but possibly the two methods may be beneficially combined. The "screws" will save the young ones, and the colts will be at hand and up to the mark, to realize any tempting price that may offer. Let me, however, at once disclaim all idea of metamorphosing foxhunters into horse-dealers; my only desire is to assist those who, though equally attached to the sport with their more favoured brethren, are troubled with the infirmity of short purses. The reader must not imagine that this is the plan I would recommend indiscriminately, nay, even for general adoption, but merely as a kind of make-shift for limited incomes, and one by which the stable may be made to defray a portion of its own expenses.

With regard to procuring what, in stable language, is commonly denominated a "screw," the purchaser need not trouble himself so much about the known good qualities of the horse, as his general make, so that it is adapted for the services to be required of him; and, above all, he must be particular about the condition of the animal. If he is just out of his pasture, and clogged with grassy flesh, nothing but trouble, annoyance, and expense can be expected; but, on the other hand, though he may be poor, yet, provided he has been living some time on hard meat, and performing tolerable strong work, he may soon be got into a fit state to follow hounds. One mild dose of physic, succeeded, after the interval of a week or ten days, by some alteratives, with a liberal allowance of good old oats, hay, and beans, accompanied with good grooming and regular exercise, will soon perform all that is required. Or, possibly the physic might not be required, although I should, in most instances, doubt the policy of omitting it, if only as a precaution; and, as this horse should not be purchased later than the last week in September, there will be no lack of time, I need scarcely add that, although it is not necessary that a horse, to be a brilliant hunter, should be perfectly sound, yet he must not be wanting in all material points. By this means the sportsman may be saved the expense of several months' keep during the summer, and still be possessor of a horse capable, in every respect, of carrying him to hounds by the commencement of the hunting season. But, before proceeding further, it may be necessary that I should enter more fully into detail on the subject. I will, therefore, endeavour to lay before the reader, in as concise a form as possible, the probable expenses incident to an establishment, consisting generally of two horses during the hunting season, and one for the remainder of the year.

The plan which I should adopt, were I about to form such an establishment, would be to purchase during the spring, or very early in the summer, a promising colt of four, or, what would be better, five years old, which may be met with in most counties for from 75l to 100l. If a "weight carrier," it would be so much the more in my favour, as they always command the highest prices; but at any rate, being very particular that he is fully equal to the weight he will be required to carry. If he is not this, there will always be danger of accidents. He will at this time, most probably, be just out of the hands of the breaker, or, if of the latter age, may have seen a little of hounds, and have acquired some little knowledge of his business, such as jumping, &c. From the moment he is bought, to the commencement of the hunting season, too much pains cannot possibly be bestowed upon getting this animal into proper form, and he will be better for steady riding during the

interval. Upon him the main hopes of the stable are to depend. By the first of November, if he has been treated properly, he will be quite fit to go to hounds, at least as far as his condition is concerned, and should be taken out regularly; though, if only four years old, he must be ridden with considerable caution. Before proceeding further, it may be better that I should explain what I wish to be understood by riding a colt with caution. I do not mean the mere act of what is inaptly called "shewing him the hounds"—that is, riding him about all day, just within hearing them, for he is rarely allowed to see them after they have begun to draw. This will answer no good purpose, but, on the contrary, will bid fair to do irremediable mischief: it will not only be useless, as far as teaching him anything of his business, but, should he be a colt of high courage, will in all human probability render him exceedingly fretful, if not fractious. No; let him be ridden in the place which he is intended to occupy when arrived at his full strength, and as soon as he shews any symptoms of having had enough, he must be immediately stopped, and taken quietly home. By this means he will at once understand what is required of him; he will enter into the spirit of the thing in as great a degree as his rider; and from being accustomed from the first to take his fences as they present themselves in his line, he will never after think of refusing, which would be too apt to become a habit if ridden in the other manner. With this management in the field, coupled with proper treatment in the stable, I think I may venture to say that, with anything like good luck, 200 sovereigns will not be much above his value towards the end of the season; and in most districts a customer may be found without difficulty. By this time also, if his owner has had his eye about him, he will in all probability know where to pick up another young one, to supply his place for the ensuing year.

I have already said something on the subject of purchasing a "screw" by which, of course, is meant a horse that has done some work, and very possibly may not be perfectly sound; but here good stable management will show itself, in keeping him on his work; and in what some of this management consists shall be treated of briefly hereafter. He may, or he may not, have been used to hunting: if he has, it will save the trouble of teaching: if he has not, he will soon learn; so no matter upon that score; but, as he is not to be purchased till near upon the time when his services will be called for, it is absolutely necessary that he should not be without hard condition. Should he unfortunately be in possession of a long coat, the scissors must be had recourse to, from which a wonderful change will be experienced in an incredibly short space of time. From being poor, he will begin to take on flesh; his eye will become bright and lively, his cold sweats after work will gradually disappear, and, in fact, in the space of a fortnight or three weeks he will become quite a different animal, both in appearance and, what is of more consequence, in real health. I need scarcely observe that physic and alteratives, and in many instances tonics will also be found of the greatest benefit. Let not any one be deterred from clipping for fear of the consequence of cold; with anything approaching to care, and a comfortably warm stable, nothing is to be apprehended from that cause. I had a tolerably convincing proof of this a few years since. I was, one very cold winter's night, getting into a carriage hired for the purpose of conveying myself and some friends to a ball, and upon observing that the horses were both clipped, and standing without rugs, I was induced to remark the circumstance, and asked the man who drove them if he did not consider they would be very likely to take cold? He immediately assured me that he entertained no fears of the kind, as he had always found that those of his horses which were clipped were less subject to the influence of cold, when standing about at night, than those which had been suffered to retain their natural covering. This, I must own, was rather more than I was prepared to hear, knowing, as I did, that these horses were in the habit of standing about most nights, and in all weather, although I had always been very sceptical about the great danger which has been said by some to exist. The only way I can account for it is, that they were never chilled by wet coats. But to resume. This horse will have cost from 25*l.* to 35*l.*, and, with tolerable luck and good management, will hold that price together, so that there will be no loss by him. No apprehension need be entertained as to whether a horse can jump or not. For my own part, in my love and zeal for the sport, I have repeatedly ridden post and coach horses with hounds, but never yet did I find one that could not get to the right side of his fences. Be assured that every horse can, and there are very, very few that will not jump when properly ridden, and with hounds, though there can be no disputing that some are more "*au fait*" at it than others.

OBSERVER.

### OLD ROBERT DARLING.

MANY YEARS EARTH-STOPPER TO THE HOLDERNESS HOUNDS.

A Yorkshireman and a Sportsman have, from time immemorial, been almost synonymous terms, and I have always fancied that there is invariably a certain degree of character stamped upon the inhabitants of this my favorite county, which in no degree loses its interest even in the more humble of its examples. Amongst the numerous latter class whom circumstances have placed in my way, not one is more deserving of

notice than that extraordinary character who is the subject of the following short memoir. Robert Darling, who was so well known for a great number of years as earth-stopper to the Holderness Hounds, by the appropriate sobriquet of "Dog Bob," was a native of that Southern part of Durham bordering upon Yorkshire, where in the humble and retired capacity of a ploughman he first imbibed a passion for the chase. Upon an occasion of Lord Darlington's (afterwards Duke of Cleveland's) hounds running a fox through the field where our hero was at work, he, totally unable to resist the temptation, unyoked the "fore horse of the team," who had been an old hunter, and with nerve and judgment far surpassing his years, went to the end of a long run, when the hounds killed their fox, and the Noble Master of the Hounds presented him with a guinea for the gallant manner in which, without a saddle, he had distinguished himself through the chase. Upon his return home to his master's house in the evening, he got, what he most richly deserved, rather more than a slight taste of the farmer's hunting whip, and without supper or bed was turned adrift to seek his fortune as he could. He then entered the service of a horse-breeder, and, subsequently emerging from man to master, he started on his own account as a horse-dealer, and settled at the town of Hedon, in the East Riding. These might be considered as the "palmy days" of our future earth-stopper. To the precarious profession of horse-dealing was added that of the farmer of a pack of harriers, which he kept for many years, they being chiefly supported by the subscriptions of some sporting trades-people at Hull. As time passed away, and hare-hunting became less fashionable in that neighbourhood, poor Bob very soon, without the assistance of the subscriptions, "brought his noble to ninespence," and taking his pack to London upon speculation, sold the finest of his hounds at Tattersall's; but failing to find customers for the whole, and not fancying a second taste of keeping hounds out of his own pocket, he, to use his own words, "gave the poor things their liberty on the streets of London," leaving them, as their master once before had been left, to seek their fortune through the wide world. Upon his return to Yorkshire, still loving any kind of life which was attached to hunting, he was installed earth-stopper and watcher of the fox-coverts belonging to the Holderness Hounds. In this capacity, dressed in the cast-off scarlet coats and caps of the Whippers-in, both Summer and Winter did "Dog Bob" perform the office above-mentioned till upwards of seventy seasons had bleached his scanty locks, regularly attending the pack at the covert-side mounted in full costume, and frequently appearing at the end of the day's sport riding over fences, even during his last season, which would have tried the nerves of many men of only half his years.

ACTION.

### "TWELFTH-NIGHT: OR, WHAT YOU WILL."

Hail to the Twelfth-Night King! whose reign  
Is short, but truly merry;  
His ministers are cake, champagne,  
Hot negus, port, and sherry.  
His subjects are the young and gay,  
Who their allegiance own;  
Over the drawing-room is his sway—  
An easy-chair his throne.  
It once was very truly said,  
By poet of renown,  
Somewhat uneasy is the head  
That's doomed to wear a crown.  
The Twelfth-Night King is free from care,  
No crown his ease can balk;  
'Tis much too small for him to wear—  
That little crown of chalk.  
No cares of state before him rise,  
No treaties, but a treat;  
Sugar in every shape and guise,  
Gives sweets into his suite.  
Hostilities he need not dread,  
Like some in regal stations;  
A Twelfth-Night King is at the head  
Of friendliest relations.

A PIG FOR A GUIDE.—A friend of mine has always contended that a pig is a sagacious beast, and he instances it by the following fact:—He describes himself as having been lost in a very extensive park, the undulating and wooded character of which prevented him from catching any glimpse of the house, or any point of exit; and after riding about until he became even more bewildered, he at last disturbed a pig in a heap of fern. That it was turned out to feed on the acorns and beech-nuts, then thick on the ground, was evident; and it struck him that, by riding at it, it would run homewards for protection. It galloped off, and, after the run of a mile, brought him to one of the keeper's lodges, which was hidden by trees and ivy.—*Note-book of a Naturalist.*

A SIMPLE RULE.—To ascertain the length of the day and night at any time of the year, double the time of the sun's rising, which gives the length of the night, and double the time of setting, which gives the length of the day.

# ADVERTISEMENTS.

**G. Y. BALL,**  
REGISTERED DAGUERREOTYPY PORTABLE  
LOOKING GLASS.

**NOVELTY, UTILITY, CONVENIENCE,  
COMFORT, AND ECONOMY.**

THE DAGUERREOTYPY PORTABLE LOOKING GLASS.  
If you value personal comfort, neatness of appearance, cleanliness and acceptability at the social board, or the society of the fair sex, provide yourself with the last triumph of cheapness, ingenuity, and utility. It is a portable pocket mirror, in a brass case, suited to suspend against the wall, hold in the hand, lie flat, or be self-supported at an angle of forty-five degrees on table or shelf, presenting in a convenient form a looking glass, a shaving reflector, and an invaluable counsellor after the heat of the race, the ride, the promenade, or before the entering a ball room, and in fact no person ought to be without one.

To be had Wholesale and for Exportation at 86, Newgate-street, London.

**SHIPPERS, MERCHANTS, AND COM-  
MERCIAL TRAVELLERS** are respectfully requested to inspect the DAGUERREOTYPY PORTABLE LOOKING GLASS. It will be found the most novel, useful, attractive, and saleable article at home and abroad, in the City or the provinces, ever offered to their notice. The Registered Proprietor and Manufacturer, G. Y. BALL, is prepared to execute orders to any amount, for the various sizes of the DAGUERREOTYPY Looking-Glass, on terms particularly advantageous to dealers.

86, NEWGATE STREET, LONDON.  
December 16, 1845.

**EVERY MAN HIS OWN HARNESS MAKER.**  
**THE DURHAM DUCIE HUNTING AND**  
Travelling Knife.—J. B. Durham, Manufacturing Cutler, 241, Regent-street, near Portland-place, begs to call the attention of noblemen, sportsmen, and all persons in the habit of riding or driving, to his newly invented Knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.

By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

Windsor Castle, Oct. 4, 1845.  
"Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

Teddy O'Neale  
Love On  
Ode on Burns  
The Old Arm Chair

And Twenty-three other Popular Songs.  
Remember No. 6, Fourteen Songs, and Portrait of Eliza Cook.

The Nos 1 to 5 are constantly on sale. No. 7 will be published January 27, 1846.

London: Cleave, Shoe Lane; Purkiss, Compton-street, Soho; Heywood, Manchester; Guest, Birmingham; France, Newcastle; Myers and Shepherd, Liverpool; Love, Glasgow; and all Booksellers.

**PERFECT FREEDOM FROM COUGHS**

IN TEN MINUTES AFTER USE, and instant Relief and a rapid Cure of Asthma, Consumption, Coughs, and all disorders of the breath and lungs, are insured by

**DR. LOCOCK'S PULMONIC WAFERS.**

Read the following from Mr. J. C. Reinhardt, 22, Market-place. Dated Jan. 9, 1845.

Gentlemen,—Many and surprising are the testimonies of relief afforded to confirmed cases of asthma and consumption and long standing coughs, and it will gratify me to refer to many respectable parties who are really anxious to make known privately the great benefit they have derived from this truly reasonable remedy. I enclose a testimonial of no ordinary value, as it is the genuine expression of a grateful man's feelings. I remain, J. C. REINHARDT.

Cure of Cough and complete Restoration of Voice. Jan. 9, 1845.

Sir,—Having been cured of a most obstinate hoarseness and cough (which for a considerable time totally deprived me of my voice) by means of Locock's Pulmonic Wafers, and having spent pounds in seeking relief, but all to no purpose, I scarcely know how to express my gratitude for the surprising and sudden change they have wrought upon me. I feel the least I can do is to assure you it will give me unfeigned pleasure to satisfy any one who favours me with a call, as to the wonderful efficacy of these Wafers.

(Signed) J. MEMELL.

No. 7, Alliea-street, (Sculptors, Hall.

The particulars of hundreds of Cures may be had from every Agent throughout the kingdom.

DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1d., 2s. 6d., and 11s. per box.  
Agents: DA SILVA & Co., 1, Bride-lane, Fleet-street, London. Sold by all Medicine Vendors.

CAUTION.—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground. If purchasers will attend to this caution they will be sure to get the genuine article.

**WAR WITH AMERICA.**

Now Publishing, in Penny Numbers, Weekly, and Sixpenny Parts, Monthly.

**THE PICTORIAL HISTORY OF AMERICA.** By JOHN FROST, A.M.

It will comprise all the authentic Historical Information relative to that enterprising nation, from its discovery to the present time. Embellished with beautiful Engravings.  
London: Willoughby and Co., 50, Aldersgate-street, and all booksellers.

**THE EARL OF ALDBOROUGH**

CURED BY  
**HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Laghona, 21st Feb. 1845.

To Professor HOLLOWAY.—

Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment in case of any of my family should ever require either.

Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout the CIVILISED WORLD, at the following prices:—1s. 1d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street, Soho, and all Booksellers.

**THE CONCENTRATED DETENSIVE ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcers, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

The CORDIAL BALM OF SYLIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter), £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.

At 100, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deamgate, Manchester, on Mondays, Tuesdays, and Wednesdays.

LONDON:—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIDDLE.—Thursday Jan. 1, 1845.

THOMAS MOLINEUX.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BEECHER TO THE LAST BATTLE OF CRIEB.

### CHAPTER XI.

#### THOMAS MOLINEUX.

(THE COLOURED COMPETITOR FOR THE CHAMPIONSHIP.)

**M**OLINEUX, the hardy, determined, and dangerous opponent of Cribb, under whose memoir will be found the details of the Championship contest, will be the last of the series, in the Fourth Period of our Fistic Annals. Unnoticed, unfriended, and unknown, this sable gladiator made his way to London, in search of fame. His skill and strength had been tried in several contests in his native America; he felt confident in his own capabilities, and no sooner did he arrive in the "world's metropolis," London, than proceeding to a celebrated sporting house, he offered himself as a candidate for pugilistic fame. He was not long ere he attracted the notice of the patrons of those gymnastic sports, which, from their practice and support, have installed principles of valour into England's hardy sons, and have not only added greatness but given stability to the national character.

Molineux came as an open and bold competitor for boxing fame; he challenged the proudest heroes to the hostile combat. It was, however, objected to Molineux, that he was too ambitious; if so, he paid for his

temerity: yet, as his claims to pugilism were of a high order, the greatest honour attaches to the conqueror of such a formidable antagonist.

Molineux's trial set-to in England was with a Bristol man, of robust make, and about six feet in height, in Tothill-fields, on July 24th, 1810. Richmond second Molineux, Cribb his countryman. It was a game fight, and continued for an hour. Molineux punished his opponent so severely, and gave such specimens of dexterity and science, as to attract the observation of every spectator; and on his being declared the conqueror, he was immediately matched to fight Tom Blake, a man denominated, from his fine bottom and resolution, Tom Tough; a boxer of great repute and practice.

In less than a month from the above-mentioned battle, this contest was decided upon the coast, a few miles from Margate, on August 21st, 1810, on the same spot of ground on which Richmond and Maddox had so bravely contended. Molineux was attended by his friend Richmond; Blake had for his second Tom Cribb, and his bottle-holder was Bill Gibbons.

#### THE FIGHT.

Round 1. The fame of Molineux having spread abroad, considerable anxiety was manifest; good sparring was exhibited for a short period on both sides, when Blake showed himself clever with both right and left, stopping the

return of Molineux; they closed, but Blake, in slipping from his antagonist, received a terrible hit on the back of his neck, which was repeated by the Black so severely as to send Blake down. (Even betting.)

2. Blake soon discovered that his opponent was not to be easily disposed of, and that his blows, however well directed, were not heavy enough to knock his adversary down. Molineux seemed to disregard the attempts of Blake, and showed himself tolerably versant in science, by beating down his adversary's guard with his left hand, while his right levelled Blake with stunning severity.

3. Blake appeared rather exhausted, which Molineux perceiving, went in to improve; but Blake hit him on the jaw; they rallied and fell, Blake undermost.

4. A truly obstinate round; but evidently in favour of Molineux, who broke down Blake's guard and punished him severely in the face; notwithstanding, Blake put in several body-blows, but they were not effective, and he was ultimately knocked down. (5 to 2 on Molineux.)

5. Blake distilled the claret freely, but with great resolution rallied, when Molineux held his man round the neck with his left arm, and flogged him so tremendously, that he fell completely exhausted.

6. Molineux had it all his own way this round. Without ceremony he went in, and knocked down Blake's guard with his left hand, and with a terrible blow, with his right, levelled his adversary. (All betters but no takers.)

7. Blake's game was not yet daunted, he rallied with considerable spirit; some good blows were exchanged; Blake fell from weakness.

8. Molineux determined to finish the contest, went in with uncommon fury; Blake endeavoured to retreat, from the violent efforts of his opponent; but was compelled to rally, and got in a good blow upon the cheek of his opponent. Molineux returned with a tremendous hit upon Blake's head, that so completely took all recollection out of him that he was deaf to time, when Molineux was proclaimed the conqueror.

The amateurs were completely astonished at the improvement exhibited by Molineux in this contest, and the punishment he dealt out was so truly tremendous, and his strength and bottom so superior, that he was deemed a proper match for the Champion, Tom Cribb. A match was in consequence made for two hundred guineas a-side, and a subscription-purse of one hundred was to be given to the winner. And now the jealousy commenced, and the aspiring ambition of Molineux to obtain the Championship of England, excited the anxiety and interest of the sporting world; the honour of the country was at stake, and it may be safely asserted that no boxer ever entered the ring with so many wishes for his success as Tom Cribb.

It was on December 18th, 1810, at Copthorn, a few miles north-west of East Grinstead, Sussex, that Tom Cribb added fresh laurels to the Championship, and honour to his country, for the minute particulars of the "how," we refer the reader to pages 408 and 428, Nos. 25 and 26.

Notwithstanding this defeat, Molineux felt that he was entitled to another chance, and accordingly sent the following challenge in three days after the battle:—

TO MR. THOMAS CRIBB.

St. Martin's-street, Leicester-square.

December 21, 1810.

SIR,—My friends think that had the weather on last Tuesday, the day upon which I contended with you, not been so unfavourable, I should have won the battle; I therefore challenge you to a second meeting, at any time within two months, for such a sum as those gentlemen who place confidence in me may be pleased to arrange.

As it is possible that this letter may meet the public eye, I cannot omit the opportunity of expressing a confident hope that the circumstance of my being a different colour to that of the people amongst whom I have sought protection, will not in any way operate to my prejudice.

I am, sir,

Your most obedient humble servant,

Witness, J. Scholfield.

T. MOLINEUX.

After the defeat of Molineux, a young man of the name of Rimmer, a native of Lancashire, about twenty-two years of age, and who had distinguished himself in two or three battles in his own county, was matched against the competitor of the Champion, for one hundred guineas, under the auspices of Gregson. Moulsey-hurst was the scene of action, in a twenty-five foot roped ring, on May 21st, 1811. Molineux was seconded by his friend Richmond, Bill Gibbons was his bottle-holder; Rimmer was attended by Power and Jones. Three to one in favour of Molineux.

#### THE FIGHT.

Round 1. Two minutes elapsed in sparring, when Rimmer hit right and left; but his distances were badly judged, and they proved of no effect, he, however, got away—resuming a sparring attitude, Molineux put in a left-handed blow with great violence on his opponent's neck, which was returned slightly by Rimmer, who fell. (Molineux the favourite, 4 to 1, Rimmer exhibited the first display of claret.)

2. Rimmer hit right and left, made some play, and got away, but his distance was erroneous; Molineux, on the look-out, made some excellent stops in a desperate rally, but they both disengaged. Another rally immediately commenced, and here the Black's tremendous powers were witnessed, he punished Rimmer in all directions, finally flooring by blows right and left, with uncommon celerity and science.

3. Molineux now appeared confident that he was "at home, from the success of the last round, and viewing his adversary with a supercilious grin, sparred low, as if treating Rimmer with contempt. He waited, as before, till his opponent made play, when the Black hit away, and followed his man up so hard and fast that Rimmer appeared to go to the ground from a wish to avoid punishment.

4. The head of Rimmer was completely pinked; and he seemed at fault,

from a severe blow he received on the temple in the last round. Molineux put in several severe hits, right and left, over his guard, when Rimmer instantly fell, as if shot. (Molineux was the hero of the piece, and punished his opponent with considerable ease and effect. Eight to one on Molineux.)

5. Rimmer greatly distressed, and fell in making a hit.

6. Rimmer judged his distances incorrectly, and fell from weakness.

7. Rimmer in this round appeared to great advantage, he put in a good blow with his left hand, and rallied courageously—several good hits were exchanged, when Rimmer fell over his opponent's legs.

9. Rimmer strained every nerve to change the state of the battle, hit his adversary away in their rallying, and, in closing, threw Molineux.

10. Rimmer's spirited conduct made Molineux quite ferocious; he went in desperately, and was intemperate enough to make play, but in pursuing Rimmer, and punishing him to all parts of the ring, at length succeeded in flooring him.

11. Rimmer showed himself entitled to the appellation of a game pugilist. Several good blows were exchanged; but Rimmer appeared to have no judgment of distance; he also tried to avoid the severity of his opponent's hits by holding his head down, whereon he received several blows before he fell.

12. Rimmer was losing the battle fast, and hit his adversary's body without effect—Passion was now uppermost, and he ran in after the Lancashire method, lifting Molineux by the thighs, and throwing him down. (Some murmurs of "Foul! Fair!" &c.)

13. Rimmer hit his antagonist over the mouth, but was thrown by him.

14. Rimmer rallied and the men closed, when each tried to show his strength, but both fell in the attempt, owing to a Lancashire touch of Rimmer.

15. It was all up with Rimmer, he retreated to every part of the ring, followed closely by Molineux, who put in a dreadful stomacher, which floored him. A scene now took place which begged all description; during the time Rimmer lay prostrate on the ground, the ring was broken, owing, it is said, from the antipathy felt against a man of colour proving the conqueror:—if it were so, the illiberal were disappointed by this manoeuvre, as those who had taken the odds gained nothing by the event. Rimmer was completely exhausted, almost in a state of insensibility. Corinthians and Costermongers were in a rude contact; Johnny Raws and first-rate swells jostling each other; pugilists and novices, all jawing and threatening, but no hearing. The confusion was beyond every thing; sticks and whips at work in all directions, ten thousand people in rude commotion, and those persons in the interior of this vast assemblage suffering from their attempts to extricate themselves from so perilous and unpleasant a situation. Twenty minutes elapsed in this chaotic manner, when the Champion of England, assisted by some brave followers, once more formed something like a ring. The men again set-to. It proved a short-lived advantage to the latter, notwithstanding extraordinary exertions were made to renovate him and get him upon his legs, but it was all in vain. During six more rounds Rimmer was so severely punished, that he was unable to stand up, when he acknowledged that he had received enough!

In this fight Molineux had exhibited such tremendous powers of mil-ling, that after the defeat of Rimmer no other pugilist possessed temerity to call the man of colour to the field, till he once more entered the lists with the Champion of England, at Thistleton Gap, in the county of Leicester, on September 28, 1811, and was again vanquished; but in a much shorter space of time, the contest continuing only nineteen minutes and a few seconds! (See pages 429, 440, Nos. 26 and 27 Sportsman's MAGAZINE.)

The joy of the flash side cannot be described—and considering the depressing disadvantages under which Molineux fought, he performed wonders. It is not meant that Molineux had not fair play throughout the fight in the ring—it is well known that he had—but the Black contended before a partial multitude; the pugilistic honour of the country was at stake, and the attempts of Molineux were viewed with jealousy, envy, and apprehension.

It was this prejudice, a disheartening one to bear up against, that Molineux, by never even approaching to unfairness, and the exercise of a manly forbearance in critical situations, was called on to remove; he could not help seeing the applause and cheering were decidedly on the part of the Champion; in fact, the man of colour experienced from the bulk of the spectators a very different reception, occasioned, by the extreme anxiety of the friends of Cribb for the safety of his honour and renown; for his sable opponent was truly formidable. These observations, nevertheless, do not pluck a single leaf from his well-merited laurels; but impartiality must supersede every other consideration. It would be absurd to say that Molineux underwent any thing like a regular training; on the contrary, he indulged himself to excess—without a patron, he had to range from town to town, to support himself by exhibitions of sparring, and entering into all the glorious confusion of larks and sprees that might present themselves; while far different was the position of the Champion. Placed under the immediate direction of Captain Barclay, and secluded from the world, at the estate of that gentleman in far Scotland, his condition was in the finest possible tone, his mind cheerful, and he felt confident that every chance was in favour of his success. Molineux, in spite of his undoubted high courage, laboured under considerable depression; wherever he went he was unpopular; which circumstance was considerably heightened upon his public appearance to face his antagonist. His constitution, too, was by no means so good as in the former contest: but his efforts were tremendous and terrible, and for the first few rounds of the battle the flash side trembled for the result.

(To be continued in our next.)

## BRITISH BIRDS.—NO. XXVI.

THE NUTHATCH.

**BY** way of a little variety we this week alternate the water-fowl and their closely allied species, with a lively little chirruper whom the cold season often sends from his favourite woods to haunt the neighbourhood of man's abodes. The nuthatch is admired for its plumage, its liveliness, agility, and great cunning in catching and hiding its food. Its length is six inches and a half, of which one and a half is included in its tail, and three quarters in his beak, which is strong, straight, a little flat at the tip; the eyes are greyish brown; the feet yellowish grey, the claws very strong. The forehead is blue only in the male; the rest of the upper part of the body is of a blue grey; the cheeks and throat are white; a black streak passing across the eyes extends from the base of the beak to the neck; the belly and breast are of a dingy orange colour.

When wild it generally frequents woods. In the winter it approaches villages, and will even fly into barns and stables.

In the house it must be kept in a cage made entirely of wire, as wood cannot resist the strength of its beak.

A bird of this species, which had been accidentally winged by a sportsman, was kept in a small cage of plain oak wood and wire. During a night and a day that his confinement lasted, his tapping labour was incessant; and after occupying his prison for that short space, he left the wood-work pierced and worn like worm-eaten timber. His impatience at his situation was excessive; his efforts to escape were unremitting, and displayed much intelligence and cunning. He was fierce, fearlessly familiar, and voracious of the food placed before him. At the close of the second day he sunk under the combined efforts of his vexation, assiduity, and voracity. His hammering was peculiarly laborious, for he did not peck as other birds do, but grasping hold with his immense feet, he turned upon them as a pivot, and struck with the whole weight of his body, thus assuming the appearance, with his entire form, of the head of a hammer, or, as birds may sometimes be seen to do on mechanical clocks, made to strike the hour by swinging on a wheel. The Rev. W. T. Bree, of Allesley, says, that having caught a nuthatch in the common brick trap used by boys, he was struck with the singular appearance of its bill, so unlike that of any bird he had ever seen. It was blunt at the end, and presented the appearance of having been truncated in an oblique direction, as if the natural beak had been cut off. He naturally inferred that it had been fairly ground down to about two-thirds of its original length, by the bird's pecking at the bricks, in its efforts to escape from the trap.

**Food.**—In its wild state it lives on insects, which it seeks for in the trees, being able to cling to and run about the branches in any way: it also eats nuts and beech mast, which it skilfully fixes in the chinks of the trees, that it may crack them more easily.

In the house, it may be fed on hemp seed, oats, barley meal, or even bread. The way it crushes the hemp seed and oats is very curious; it takes as many as it can in its beak, and ranges them in order in the cracks of the floor, always taking care to put the large end lowest, that it may break them more easily; it then begins to despatch them one after another with the greatest skill and agility.

A lady, whom we were in the habit of occasionally visiting, amused herself in the winter, and particularly when the snow was on the ground, with throwing, several times a day, different kinds of seeds on the terrace below the window, in order to feed the birds in the neighbourhood. These soon became accustomed to this distribution, and arrived in crowds when they heard the clapping of hands, which was the signal used to call them. She put some hemp seed and cracked nuts even on the window-sill, and on a board, particularly for her favour-

rites, the blue tits. Two nuthatches came one day to have their share in this repast, and were so well pleased that they became quite familiar, and did not even go away in the following spring, to get their natural food and to build their nest in the wood. They settled themselves in the hollow of an old tree near the house; as soon as the two young ones, which they reared here, were able to fly, they brought them to the hospitable window where they were to be nourished, and soon after disappeared entirely. It was very amusing to see these two new visitors hang or climb on the blinds, whilst their benefactress put their food on the board. These pretty creatures, as well as the tits, knew her so well, that when she drove away the sparrows which came to steal what was not intended for them, they did not fly away also, but seemed to know that what was done was only to protect and defend them.

These nuthatches remained near the house for the whole summer, rarely wandering, till one fatal day, at the beginning of the sporting season, in autumn, they no sooner heard the report of a gun than they disappeared, and were never again seen. It is possible that fear alone had driven them so far that they could not find their way home again; they did not know that there they would have been in greater safety.

If these birds are left at liberty in a room, they are accustomed, like the tits, to hide the greater part of what is given to them, to keep it for another meal; but their trick of piercing holes in the wood makes them inconvenient, and therefore it is better to keep them in a cage.

The nuthatch builds its nest in the holes of old trees, and lays six or seven eggs spotted with red. As it has the same taste for hemp seed and oats as the tits, it may often be caught in the same snare; it may also be taken in the area or barn-floor trap.

## CORRESPONDENCE.

To the Editor of THE SPORTSMAN'S MAGAZINE.

SIR,—Should the following account of a combat between a horse and a lion, taken from a very old and rare volume of Sporting Annals, be deemed worthy of insertion in your valuable pages, it may conduce to the amusement of some of your readers.

"A nobleman in the early part of the reign of Louis XV. having a very vicious horse, which none of the grooms or servants would ride, several of them having been thrown, and one killed, asked leave of his majesty to have him turned loose into the menagerie against one of the largest lions. The king readily consented, and the animal on a certain day was conducted there. Soon after the arrival of the horse, the door of the den was drawn up, and the lion, with great state and majesty, marched slowly to the mouth of it, when seeing his antagonist, he set up a tremendous roar. The horse immediately started, and fell back; his ears were erected; his mane raised; his eyes sparkled; and something like a general convulsion seemed to agitate his whole frame. After the first emotions of fear had subsided, the horse retired into a corner of the menagerie, where, having directed his heels towards the lion, and having reared his head back over his left shoulder, he watched with extreme eagerness the motions of his enemy. The lion, who presently quitted his den, sidled about for more than a minute, as if meditating the mode of attack; when, having sufficiently prepared himself for the combat, he made a sudden spring at the horse, which defended itself by striking his adversary a most violent blow in the chest.

"The lion instantly retreated, groaned, and seemed for several minutes inclined to give up the contest; when recovering from the painful effects of the blow, he returned again to the charge with unabated violence. The mode of preparation on the second attack was the same as the first. He sidled from one side of the menagerie to the other for a considerable time, seeking a favourable opportunity to seize upon his prey, during all which time the horse still preserved the same posture, and still kept his head erected and turned over his shoulder. The lion at length gave a second spring with all the strength and velocity he could exercise, when the horse caught him with his hoof on the under jaw, which he fractured.

"Having sustained a second and more severe repulse than the former, the lion retreated to his den as well as he was able, apparently in the greatest agony, moaning all the way in most lamentable manner."

What became of the lion afterwards is not mentioned, but the horse was soon obliged to be shot, as no one ever dared to approach the ground where he was kept.

Yours, &c.,

OTHO.

[The antiquity of our correspondent's extract, we fear, is quite equal to its incredibility, we have read a similar story, more plausibly told, of a tiger and a powerful wild stag.—Ed. SP. MAG.]

## DISTEMPER.

SIR,—Having lived most of my life in a sporting county, I have seen in my days numberless instances of distemper, and, like most people I have tried many medicines in order to cure it; and now I can assure you I make as certain of bringing a dog safe through the complaint, as I do of ridding myself of a slight cold or cough.

As I should like all my brother sportsmen to be acquainted with my method of cure, I make bold to beg the favour of your inserting it. The recipe consists of crude opium, calomel, and tartarized antimony, of each twelve grains, mixed with honey or syrup, and made into six pills; two of which are to be given to the dog every other morning, fasting, keeping him in a warm situation. Should this not effect a cure, the same may be repeated a week afterwards.

I have here given the quantity sufficient for a large full grown dog; consequently spaniels and smaller dogs should only have half. Although I have ordered the physic to be given fasting, I generally myself offer to the dog, towards the middle of the day, some warm food—gruel, or thin crowdy. Many remedies have I tried, but none have ever answered so well as the above: and with proper attention to the dog, and taking the disease in its infancy, I have seldom known these pills to fail. Great care should be taken, as it is a powerful medicine.

P. B. T.

#### REMARKS UPON DOGS AND DOG-BREAKING.

SIR.—I doubt not many of your readers will start at this formidable title, which of itself might be made to embrace sufficient matter to fill a volume. The point, however, to which I would at present wish to attract attention is the great deterioration of late years amongst the breed of dogs used for the purpose of field sports, hounds excepted, as they are confessedly as near perfection, both as regards shape, speed, and bottom, as they can ever be expected to reach. I am now alluding to pointers and setters, a good brace of which, of either sort, can hardly be procured, unless by paying an exorbitant price, upon the average from £15 upwards, and even then with the uncertainty of procuring first-rate dogs. After dipping deeply into your pocket for their purchase money, it will generally be found that one of them at least will chase hares or mouth its game, break fence, or, in short, commit one or more of those numerous faults to which a partly broke animal is liable, and so trying to the temper, and consequently steady shooting, of its master. Besides, if one of the brace take it into his head to run riot, it is ten to one that his companion will not take his cue from the other, and will thus contract his bad habits in a very short period. Now, this difficulty of obtaining good dogs may be attributable to two reasons:—

First, that owing to the increase of sportsmen for several years past (would that I could say game!), so many buyers are to be found, that the number of well-bred and well-broke dogs are not sufficient to meet the demand; the consequence is, that in order to supply the numerous purchasers, every method is had recourse to; those remaining of really pure blood and high breeding are crossed over and over again, and, as may be supposed, after a lapse of two of three generations, the race is merged into a mongrel description of animal (amongst pointers especially), comprising frequently three-fourths of those to be met with in the kennel of the dog vendor.

The second reason to be assigned for their scarcity is the difficulty of meeting with good dog-breakers. The very few to be met with of this class are so much sought after, and their charges are generally so exorbitant, that they are far beyond the reach of the sportsman of moderate means, and he is consequently often obliged to tutor his young dogs himself, rather than submit them to the tender mercies of a common breaker.

Very few gentlemen are there competent to undertake this very laborious task. The most unconquerable patience and forbearance is required, as by your losing your temper you will not only probably neutralize all your previous lessons, but ruin him completely by spoiling his disposition as well as your own, and making him sulky, savage, and uncertain. Still, if you can be tolerably sure that you are so fortunate as to possess the qualifications I have enumerated necessary for such a task, coupled with a tolerable knowledge of the system to be observed, and have moreover good raw material to work upon, then the best plan by far that you can pursue, in order to obtain a good and dependable team of dogs for the field, is to break them in yourself, as you will have them obedient to your own hand, docile, affectionate; and withal, there is the satisfactory knowledge that you have made them what they are—it is, in fact, like catching a trout with a fly of your own manufacture. Although myself but a novice, yet I will here take the liberty of suggesting a few remarks on the subject—of but little or no importance, I confess, to the matured sportsman, yet still to the tyro perhaps not uninteresting, the more so, perhaps, as they have been tried by myself, and not found wanting. In the first place, take out your puppies as soon as you can; nothing is better calculated to inure dogs to their work, harden their feet, and bring them into perfect subjection, than to commence their instruction as early as possible. When about five or six months old, let them follow you in your short beats, say of two or three hours at a stretch; they will thus become accustomed to the report of the gun, and will see what the other dogs are about, and what in their turn will be expected from them; in fact, a well-bred puppy will generally have a very fair idea of pointing and backing without any previous instruction. There are few trials more severe for the temper of a sportsman than to see one or more of his recently broken dogs at the very first shot making the best of his way home to his kennel; and this is

by no means a criterion of an indifferent dog, as the best may do so, but from the neglect of the breaker in omitting to accustom them to the report of a gun. A pistol charged with power is sufficient, and by discharging this occasionally, both in the field and over them at their meals, the most timid animal will in a short time be brought to stand fire. Let them now and then smell to a dead bird, and caution them against biting it or pulling out its feathers, and you will thus teach them to be tender-mouthed, and retrieve their game without mutilating it or injuring its plumage. One of the most difficult natural propensities to be overcome is the fondness all dogs have for chasing their game (hares especially), when it is once a-foot; and in many the habit is so strong, that although at a point they may be immovable, and will stand to their game with the greatest patience, yet the moment it is up, they lose all command over themselves, and give chase in the most provoking manner, heeding neither whistle nor threats. The best method to be adopted here is to hunt them with a cord of from twenty to thirty-yards long, and when the dog comes to a point, walk immediately up to him to spring the game, at the same time placing your foot upon the cord; as usual, as soon as the hare or bird moves, he makes his customary rush, and then is your time to pull him with a jerk flat upon his back, and this repeated some half dozen times will seldom fail in its intention.

There are many opinions as to the number of dogs requisite to take into the field. Some sportsmen, with whom I am acquainted, say, that if your dogs are good and properly broken, you can hardly, in reason, take out too many (happy the man who has the option of doing so); and again, many—in fact, the generality of sportsmen—are content with a brace, and some with even one steady dog, and the last mentioned, be it observed, has not generally the smallest bag, especially where game is abundant. With an excellent pointer lying now on my rug in my barrack-room, I have had many very satisfactory days' sport single handed, yet I confess that in this way much, very much of the pleasure in shooting is lost, namely, that of seeing your dogs working well together, and each taking their own beat in turn—not, as is often the case, one following the other in Indian file, trusting to one only to find the game: this is a fault which ought instantly to be checked. Time is also greatly saved by dividing the work, especially if there is a large extent of country to beat. A friend told me that he had several times seen a keeper working a team of no less than seven brown pointers, if I recollect aright, belonging to the late Colonel Whitney, of Herefordshire, all ranging in a separate direction, and on one of them coming to a point, the remaining six immediately dropped, and not one would stir until the game had been sprung and the signal had given for them to rise and resume their work: this must have been a sight worth travelling many miles to witness. Pointers for work are generally in greater demand than setters, both on account of their acknowledged superior staunchness and nose, that "*odora canum vis*," described by Virgil, and also of their ability to continue for a longer period without water; but many give setters the preference for their appearance, more dashing style of ranging, and greater capabilities for cover-work, from their rougher and better protected coats. I have, however, possessed pointers which neither the thickest gorse nor the strongest underwood would deter, and setting aside my partiality for this description of dog, my opinion is, that pointers will, if properly trained, stand any description of work equally well with setters. Still, cover-ranging is out of the proper line of either pointers or setters, and is very injurious to their steadiness, and their place should there be supplied by spaniels. In those who do not regard their own trouble, and who are determined, as all sportsmen should be, to possess first-rate dogs; my best advice is, for them to break their own themselves, and if they have not the means of breeding puppies in their own kennels, let them procure them from well-known and authentic sources, upon the purity and goodness of which they can depend. The best work I know, to assist them in their undertaking, is "*A Treatise on Dog-breaking*," by W. Floyd, game-keeper to Sir James Sebright, containing much useful information, and many hints, valuable to all interested in field-sports.

I will conclude these few remarks with a short extract from one of them, which is the best I am acquainted with—"The Modern Shooter," by Captain Lacy; a desirable addition to the library of all young sportsmen.

"Nothing can be more delightful than sporting with good dogs, nor more discouraging and annoying than having ill-bred or badly-trained ones to accompany you: with the former, you get half as many more shots as with the latter, and those often much fairer shots, and are never put one of temper. In short with the one shooting is all pleasure; with the other, it is, comparatively, all toil and vexation." W. B. D.

SIR.—As I profess myself a sportsman, I consequently admire your agreeable weekly publication. The cause of this my first essay in the theory part of field diversions is to record (if possible) the merit of a favorite pointer.

With persons not used to sporting dogs many things appear incredible that are oftentimes related for positive facts. Had I not witnesses of veracity ready to acknowledge how frequently their credulity has blushed at the sight of her performances, I should be diffident of announcing her actions in this public way. The little information I have gained

respecting what constitutes a true pointer, has been wholly owing to her superior sagacity at finding; and perhaps the declaration may appear presumptuous, when I assert I never yet found her equal although hunted with numberless first-rate dogs.

I have frequently endeavoured to learn of my sporting friends what were the most valuable qualifications of a pointer; their different replies were—to find the most game, steady when found, to back the find, come into charge, bring the game, &c. I will add, in my opinion, the greatest of all qualifications to this list—and that is, when, having several times found a straggling bird or birds of a scattered covey at a remote part of the field or heath, (for she ranges wide) but sufficiently within rate in making to the point, I have frequently trod upon one or more birds; (perchance I killed); the game has often dropt in her sight, and several times within a few yards of her, and provided the game at her nose withstood the first report, I never yet lost the advantage of her find. At two years old she first acquired this habit. Being out with a friend last season, in beating the first snipe ground we came to, she very soon found; in making up, within about thirty paces of the point, I sprung a whole snipe, it fell close before her, she turned her head towards me (as if to rebuke me for trying her patience so long), then to the point as before. I rather delayed reloading, and wished my companion the shot, (but he declining) I walked on and trod up the jack snipe, which she highly enjoyed to see drop to her.

That same day at the request of my friend I made a mark in my pocket book of every point she had; and at the close of that day's sport, her performances of finding amounting to thirty-two brace and a half of snipes, two coveys, and a single bird; notwithstanding I hunted with her a brace of dogs, half brothers to her, and allowed by the first judges to be as excellent dogs as any in the kingdom. The gentleman in whose possession they now are would not part with them for any consideration. It is needless to enter into the particulars of miles I have beat after different parties, on many separate days, when they have traversed the snipe bogs with one and sometimes two brace of pointers each (names I could mention); and when snipes were supposed rather scarce, have left the ground, despairing of sport. I have beat the same spot in which their dung-hill breed only bemired themselves and found nothing, and have brought away two, three, and four brace of snipes, and oftentimes moved double and treble the number. I could add an immense catalogue of days to those mentioned, but consider I have sufficiently tried your patience with these ill placed (but plain) truths to her credit.

I beg pardon for keeping you in such a dull and barren beat so long, and remain yours, &c.

A WORCESTERSHIRE SPORTSMAN.

Malvern, December 16th, 1845.

### HOYLE IMPROVED,

BEING FACETIOUS FANCIES ON SHORT WHIST. BY A QUEER CARD.

If you have three cards of a suit, lead one of them first.

Never win your partner's trick, except under very particular circumstances. For instance, it is generally advisable to do so when you can't help it.

If your partner lead spades, and you have no spade in your hand, you must be careful not to follow suit. Should either of your antagonists lead spades under like circumstances, it is usual to refuse in like manner.

If you have a strong reason for not desiring to win the odd trick, you can easily avoid it by a couple of revokes.

Honours do not always score at three, as some of the works on whist state. For example, you cannot score honours at three if you haven't got them; nor even if you have them, unless you have three also.

If you are elder hand you must play first. No deviation from this rule is ever allowed except amongst the Jews, who are presumed to play from right to left.

Every person has a right to shuffle before the cards are dealt. But any shuffling after that is liable to be objected to.

You may make as many tricks consisting of four cards as you can; but no tricks of any other kind are allowed.

No intimations of any sort are permitted to be made during the play. This law applies equally to strangers and to the most intimate friends.

When you are called upon to cut the cards, you must not use a sharp instrument, nor leave the table, which would be cutting them in another sense. The expression is figurative, and is on that account liable to be misunderstood by beginners.

When a card is faced in the deal there must be a fresh deal, unless it happens to be the last card, which ought to be faced.

A faced card does not necessarily imply a card with a face on it. Every card is a faced card when it is turned on its back. But your partner is said to face you, although it is not imperative to turn him on his back for that purpose.

It is generally held to be good play to return your partner's lead, but there are exceptions. You should never return it unless you have got the lead yourself.

The old maxim of win the trick when you are in doubt holds in all cases but one, and that is when you cannot win it. In this case you are

worse off than the criminal in the dock, for you are clearly disentitled to the benefit of the doubt.

That are several technical terms in whist with which it is necessary to be acquainted. The common phrase "playing cards" is obviously absurd. Cards never play of themselves. For the same reason you should never invite any person to play cards with you, but to play whist, &c. It is the game that is played, not the cards. Cards are the instruments which form the orchestra, not the tune played by them. You do not say "Play the band," but "Play the Rogue's March."

"Finessing" is an attempt to gain an advantage. It is very common in other games besides whist, and may be varied according to circumstances. Thus, if you have the ace, seven, and six in your hand, you put on your seven third player, and deceive your adversary into the notion that the seven is your highest, so that next round he puts on the five and you trick him with your six. It is much the same as when a debtor makes a poor face, and his creditor, glad to get anything, is betrayed into a composition of five shillings in the pound, whereas he could get the full sum if he only put on the screw.

"Forcing" is playing a suit which your adversary is obliged to buy dearly with a trump or lose the trick altogether.

You will understand this more clearly from an analogous case which occurs every day in real life. If you have possession of a house and can't pay the rent your best play is to force your landlord. He will come down handsomely to get you out.

"Long trump" is the technical name of the trump that remains in your hand after all the rest are out. But it also means a capital good fellow, upwards of six feet high.

"Score" signifies the account you have run up either at whist or in a tavern. The latter is more difficult to clear off than the former.

### A TRICK ON THE CARDS.

Place three people, together with yourself, at a square table, one opposite to you and one on each side. Keep their attention engaged (the great secret in all tricks) while you pretend to shuffle the cards, but while you are in reality arranging them so that every fourth card shall be one suit—says clubs—the last being one of indifferent value to avoid suspicion. Then give the pack to the person on your right hand to cut, which done, suddenly occupy their attention again, while you resume the pack exactly as it was before, the lookers-on believing that you have accepted the cut. Then deal the cards as for a game of whist, which you may now play out in the ordinary way, giving or taking any odds (if you can get them) that you will win every trick. This is a very curious piece oflegerdemain, which is witnessed at the west-end nightly by thousands of people who are utterly unable to detect how it is done.

### NOTICE!

Numbers THIRTEEN and EIGHTEEN of the SPORTSMAN'S MAGAZINE, are reprinting. All OTHER NUMBERS and back PARTS ARE IN PRINT, and may be procured at the office, 42, HOLYWELL STREET, STRAND.

\*.\* Observe: many country dealers who trade with Town Agents, NOT FAVOURABLE to the circulation of this paper, are in the habit of stating that the back NUMBERS ARE OUT OF PRINT: this is a DISHONEST FALSEHOOD; and upon the name of the country vendor being forwarded (under cover, to the EDITOR of the SPORTSMAN'S MAGAZINE, at 42, Holywell Street, Strand,) enquiry will be made; and if the non-supply has been wilful, the name of the agent shall appear in a BLACK LIST, for four successive weeks in a prominent part of the Magazine, and also in handbills—as one who WILL NOT supply this paper.

### TO CORRESPONDENTS.

SUBURBY.—Harry Broome beat Joe Rowe on the 13th of May last year. The fight lasted 57 minutes.

A. E. D., Liverpool.—The symptoms of Worms in a Dog are, a slight cough; a voracious appetite; irregular evacuations; and wasting of the body. If tenia, or tapeworm, give oil of turpentine in doses of two, three, or four drachms according to size of dog, night and morning, mixed with the yolk of an egg for three days successively.

J. P. B., Goswell Road.—Distemper in Dogs. Opium two grains, Emetic Tartar (an invaluable dog-medicine) three grains, to be given at night. This is a sufficient dose for so young a dog as you mention; repeat the dose every third night till the dog recovers; keep him in a warm place, and feed with a liquid diet, such as broth, gruel, &c. If nostrils should discharge, syringe or wash them twice a day with half an ounce of alum dissolved in a pint of water, or weak goulard water (diluted extract of sugar of lead).

A COURSER.—THE TREATISES in this Magazine, on the GAMCOCK, COUSING, &c. are not procurable in any other form. The back numbers may all be had by order, except 13, which is reprinting.

SANDERSON, Alton.—THE LAWS OF COURSING, both ancient and modern, will appear in the Treatise on "COURSING AND THE GREYHOUND" now in progress. We exert ourselves in catering for the amusement and edification of all classes and grades of Sportsmen, but feel sorry as well as ashamed to say, that we do not reach the sale of

many miscellaneous periodicals, not half so costly or troublesome in the getting up. A little activity on the part of sporting friends and subscribers would extend our circulation without cost to themselves, and give us the means of yet further improvements. 8000 copies weekly will not cover the expenses of so cheap a publication as this, and leave a profit.

G. S., Highbury Vale.—We answered your first query last week in replying to another correspondent.—2. The following are the most approved varieties of Canaries. The Canary (cock) with a Goldfinch (hen). The mules between a Canary and a Siskin. A Canary and a Greenbird; or a Canary and a Linnet. Other mules are more difficult to obtain.—We cannot advertise bird dealers, at our own expense, but there are several in Compton-street, Soho, and a very respectable one in Great St. Andrew-street, Seven Dials, from whom we have purchased some very good birds. Have you tried the SALTCAT with your pigeons, the recipe for which we gave in number 18, page 323, in answer to a Correspondent?

H. W. K.—Eggs are never allowed in training—they are heating and bad diet. Laugh at your brother in return. Is the knowledge he is acquiring more healthful, pleasant, and useful than that you are, under difficulties, attaining? Such knowledge tends to the health of the mind as well as the body, and can never therefore be deemed useless, except by those incapable of comprehending its scope and bearing. A well-informed sportsman is a perfect gentleman; an ignorant one on all points relating to field amusements is a vulgar, half-informed cockney, whatever may be his other attainments; and so he will find, directly he gets out of the dark corner he hopes in into the light of the great world of general society.

THOS. E., Finsbury-square.—The time the egg of any bird will keep good depends entirely to the temperature of the atmosphere to which it is exposed. It may be good for months, or added in a few days—fresh at a twelvemonth's end, or musty in a week. Young pheasants, in a domestic state, are generally produced under bantam hens, as the hen pheasant, though a good layer and a good mother when wild is far otherwise in the house. Pheasants (especially the cock) are addicted to preying on small animals, and are fond of flesh. The food for young pheasants is boiled egg cut small, bread and boiled milk, alum curd, and ants' eggs (if procurable). Feed them often. Alum curd is thus made: take new milk and boil with it a lump of alum, sufficient to make it custard-like, but not hard. Hog-llice, ear-wigs, or any insects, may be given if ants' eggs cannot be got. An occasional scoured gentle will not be amiss.

TORO.—"COURAGING" is resumed in the present number. Mr. Nightingale, Mr. M'George, Mr. Dalzell, at present, Mr. Thacker in his day. SEPTIMUS SEVERUS.—It is a question for the Society of Antiquarians, which we believe is no more. Address a note to the secretary of the Camden Society: we can't tell whether it is a dog or a fox, the drawing is so grotesquely unnatural. Mr. Akerman, the medallist, might throw some light on it, though a farthing candle would be ill-spent on its investigation.

R. S.—Josh. Hudson was beaten by Martin, (both their lives will appear in Period V.), Dec. 14, 1819. It was won by an accidental blow in the second round, Josh. falling and dislocating his shoulder, time 9 minutes.

H. C., Liverpool.—There is no third volume of Darvill that we know of. We presume the regulations of the Veterinary College are procurable; they are in a book form, and presented to pupils on their paying the entrance fee. There is also a Conspectus issued as a sort of Programme of the Lectures delivered by each professor, on Chemistry, the Materia Medica, Veterinary Surgery, &c. &c. It would cost us a walk of four or five miles out and in to make the inquiry of the secretary, but if you address him your letter will find him just as quickly as ours, and whatever documents the heads of the College have issued, if published or sold, he will transmit to you. The address is, "To the Secretary of the R. V. C., College-street, St. Pancras, near London." Ruff's Guide to the Turf, published at Bell's Life Office, contains the Laws of the Turf and Betting, &c. as promulgated by the Jockey Club, besides much other Racing Information.

TOBY HUGHES.—We fear you are too late in the day. The remainder stock of the "SPORTING WORLD" was sold off by its proprietors, with whom we have as much connexion as the Pope of Rome. We want a set or two ourselves. Has your fowl any discharge about the nostrils in addition to the symptoms you state? If so we will give you a recipe next week. At present give a little pounded sulphur in the drink, keep the fowl warm (in a room if you can), and give scalded pollard, mixed with skim milk or pot liquor.

#### OUR WEEKLY CALENDAR.

SUNDAY, JAN. 11th.—FIRST SUNDAY AFTER EPIPHANY.

#### THE MONTH OF JANUARY.

Long ere the morn'-veild dawn, the bird of morn  
His wings quick claps, and sounds his cheering call:  
The cottage hinds the glimmering lantern trim,  
And to the barn wade, sinking, in the drift;  
The alternate flails bounce from the loosened sheaf.  
Pleasant these sounds, they sleep to slumber change;  
Pleasant to him, whom no laborious task  
Whispers, *arise!*—whom neither love of gain,  
Nor love of power, nor hopes, nor fears, disturb.  
Late daylight comes at last, and the stained eye  
Shrinks from the dazzling brightness of the scene,—  
One wide expanse of whiteness uniform.  
As yet no wandering footstep has defaced  
The spotless plain, save where some wounded hare,  
Wrench'd from the spring, has left a blood-stain'd track.  
How smooth are all the fields! sunk every fence;  
The furrow, here and there, heapt to a ridge,  
O'er which the seldom plough-shaft scarcely peers.

MONDAY, 12th.—Plough Monday: the day derives its appellation from the custom of the peasantry returning to their labours after the festivities of Christmas. The morning was devoted to the examination of their ploughs and implements, and with the day ended the pastimes of the season.—The grasshopper placed on the top of the New Royal Exchange, 1844; do they expect he'll find any green blades there?—Day 8h. 9m. long.

TUESDAY, 13th.—Middleham Coursing Meeting.—Harry Walker and Barnash for 25l.; see the Report in our Stamped Edition next Thursday.—Hilary Term begins.—Cambridge Lent Term begins.—In an old Almanack called Pond's, for 1678, we find this day called "Marrying day," and he adds the following—"Marriage comes in on the 13th day of January, and lasts till Septuagesima Sunday; it is out again till Low Sunday; thence it is not forbidden until Advent Sunday; but then it goeth out and cometh not in again until the 13th of January next following." Protestant countries have outgrown these fooleries, but they are still observable in many parts of the continent.

WEDNESDAY, 14th.—Oxford Lent Term begins.—MALLARD-DAY AT OXFORD: See article next week, on this subject.—Newcastle Coursing Meeting (and 15th).—Average coldest day in the year a day or two after or before this, say the weatherwise.

THURSDAY, 15th.—South Essex Second Coursing Meeting.—Tarleton (open) ditto, (and 16th).—A CURIOUS FACT.—You never called to a waiter, when he was leaving the room, but he answered, "Coming, sir."—CONSUMPTION OR MILK.—The great dairy for the milk of human kindness is Somerset House. Seek an interview with the Poor-Law Commissioners, and they will show you how delicious they strain it.

FRIDAY, 16th.—Old Twelfth Day.—Hoax of the Bottle Conjurer, 1749, and the interior of the Haymarket Theatre destroyed.—Battle of Corunna, 1809.

SATURDAY, 17th.—Big Ben beat Johnson, 500 gs. 1791.—RAILWAY GARDENING.—With a view to standard fruit, cultivate good trunks, but keep clear of all unprofitable branches. Take care that the stock is of the right sort or it will not be worth putting in, and will not pay for the outlay.

#### THE MOON IN JANUARY.

First Quarter, 4th	.. .. .	2 25 morn.
Full Moon, 12th	.. .. .	2 1 morn.
Last Quarter, 20th	.. .. .	3 51 morn.
New Moon, 28th	.. .. .	9 23 after.

#### TIDE TABLE FOR THE WEEK.

High Water at London Bridge.

	morn.	aft.		morn.	aft.
Sunday, Jan. 11th	1 44	14 3	Thursday, 15th	4 2	16 18
Wednesday, 12th	2 23	14 40	Friday, 16th	4 34	16 50

## The Sportsman's Magazine.

### Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 522.)

At SALISBURY, Aug. 28, Idleness beat Ajax for the City Members' Plate; and, for the Queen's Plate, Old England beat Red Deer and Sparsholt. Carillon won a 5 sov. Sweepstakes, and beat Dexterous in another sweepstakes of the same amount. Ajax, for a poor 3 sov. affair, beat Sparsholt.

At the ECCLES RACES, Sept. 1, Alice, h. b., beat a middling lot over a mile. I am not aware what Alice this was. For the Trafford Park Stakes, April Noddy beat T'Auld Squire and two others. The old one fell in this race, notwithstanding which mishap he beat April Noddy and several others the next day for the Gentlemen's Purse. Cerito won the Ladies' and the Town Purse.

At DARLINGTON, Sept. 2, Robin Burns won the Clervaux Stakes, beating the Castaway filly. For the Terrace Stakes a tolerable lot of 2 years old c and f came to the post, and after a sharp half-mile race Ada was first; Driffield, The Slayer's Daughter, and Cranebrook, second, third, and fourth, and a lot, including Curiosity, Thersites, and Grimston, were not placed. Vates won the Tees Stakes. For the South Durham Stakes, for two and three years old, Cranebrook showed in front, beating Grimston, Pluto, Thersites, and the others. Cataract won the Raby Castle Stakes, and Montgomery, priced at 100l. the Town Plate.

At MORPETH, Sept. 3, Northumberland won the Stewards' Plate, beating Flagman and Xanthus.

At WARWICK, Sept. 2, Wee Pet beat four good ones for the Leamington Stakes, but Pythia carried nearly the same weight, and gave two years. Gwalior won the 50 sov. Maiden Plate, beating the March First filly and some tolerable good ones, in both heats. For a 10 sov. Sweepstakes, 50 added, two and three years old, c. and f., Baronet beat the two fillies, Amazon and Regalia, being the only three which came to the post. Yardley won the Cup, beating Rochester. Columbus beat Hampton for the Stand Stakes; and Gwalior beat Kilgram and Carissima for the Queen's 100 sov. At this meeting the speculation on the St. Leger mentioned in my last was very great, the Baron being at 30, 25, and 20 to 1.

I do not recollect anything of sufficient importance in provincial racing to make mention of before the LEICESTER RACES, Sept. 10, when there was a very good lot of animals brought together. Lord Saltoun won the Leicestershire Handicap, beating The Shadow and Pergularia among others. The Hon. G. Ongley was very successful in his nominations; The Queen of the Gipsies winning two Handicaps, and Fama, one.

LICHFIELD Races were well attended, and Kitchener on Jenny Wren beat Lord Saltoun, Intrepid and Roderick for the Staffordshire Stakes. Rosa won the Members' Plate in three two-mile heats, beating Hooton and others; she is but three years old. There was a very good two years old race, which, for the hints it contains on relative running, your readers will do well to bear in mind. It is a half mile race between c. and f. Burlesque beat The Tomboy; Lapwing filly, second; Twig, third; and the colt by Don John, out of Game Lass, and Toronto not placed. Yardley won the Gold Cup, beating The Shadow but was beaten by Little Hampton in the heats for the Queen's Plate.

There was some fair sport at ABINGDON, but as it was confined to such horses as Waterloo, Columbus, Teetotaller, and Venatrix, I can hardly bring myself to trouble your readers with their performances. There was, however, a good purse, in the Marcham Stakes, which was won by Giantess beating five others.

With reference to my last communication your readers will bear in mind that The Traverser is in the Derby.

(To be continued.)

DREADFUL FOG.—The fog in the City was so intense, the other day, that a person actually got into St. Paul's Cathedral without paying—Punch.

FOX-HUNTING.—SCENE II.—GOING TO COVER.

**S**HALL we with this, our second initiatory picture, resume the hound, leaving "the horse and his rider" for more stirring scenes? We may nevertheless find room anon, for a brief say on that valuable, but less pretending animal the Cover-hack, ere we treat of his after-coming more brilliant brother, the thorough-bred hunter.

The close of the last article left us at the subject of breeding the hound, we now turn to his condition. "This is a subject," says Mr. Vyner in his *Notitia Venatica*, "continually talked of, but very little understood among the general run of sportsman. How frequently do we hear high encomiums passed on a pack of hounds for their *fine condition*, when in fact they are an army of skeletons without even a show of muscle!

Some men think that a pack of hounds must be drawn as fine as hurdles, to run; and, as long their ribs and points are all visible, they are considered in splendid going condition. There is no other animal which will endure reducing and raising again in condition in so short a period as the game-cock and the dog will; nevertheless, the latter, with all his natural propensities to improve most rapidly, in being prepared for hard work must be allowed a certain time necessary to get him fit to perform such extraordinary labour as the foxhound is called upon to endure. Not only from mine own experience, but also relying on the opinion of those, whose judgment can be depended upon, I should say that a dog, whether hound, or greyhound, or any other dog used in the chase, was at the greatest perfection of condition when raised again to a certain pitch, after he had been reduced below that pitch, than if he had been merely reduced from a lusty state of body down to that certain standard of condition. The flesh which is then on him is all muscular and healthy, whereas, in the case of his being merely reduced down to his condition, he is more frequently than not as loose and flabby as a Smithfield bullock. Perhaps some of my readers may ask, "Why then begin with hounds in cub-hunting in high condition, as they generally become lower after?" I answer, that they have been prepared for three or four months, or ought to have been; moreover, they generally sink a little after a week or ten days' work, and then go up again, after the first feverish excitement of cub-hunting is got through, before the regular season begins. A hound, to be well and really fit to go, should not only look clear and bright in his coat, with the muscles on his shoulders, loins, and thighs well developed, but he should also be firm to the touch, and be able to travel on the road at a jog-trot, with his mouth shut, and his stern up over his back. His eyes should be clear and free from any mucous secretion; when much of which is seen in a morning in the inner corners of his eyes, you may be well assured that he is feverish, usually the result of hard work without a due and proper preparation beforehand. He should also not only empty himself with freedom, his evacua-

tion being firm and free from a bilious or slimy mixture, but he should also stale without difficulty, and rather frequently than otherwise, or he should have administered to him in his feed a small quantity of cream of tartar for about two days, which will set matters all right on that point. Take a handful of the skin of a hound on his back, and pull it up; and, if it flies back to its place like India-rubber, with a nervous shiver, he is all right; but, if it remain in an unsightly ridge, clammy and sluggish, as it returns to its natural position, depend upon it that his condition is far from being what it ought to be—in fact, he is not fit to be put to hard work without further preparation.

Dressing the hounds will affect many of them equally as if they had had a strong dose of physic; some of them will be more or less swelled in their limbs and testicles, particularly if the turpentine or spirit of tar is rather stronger than usual. During the time they are confined to the kennel from the effects of the above discipline, which will be about four days, the whole of the court-yards and the floors of the lodging rooms should be carefully covered with straw, particularly in the door-ways, to prevent them from slipping and breaking their thighs, which I have known to occur, the grease from their coats rendering the ground as slippery as ice. Sometimes I have seen a portion of mercury added to the dressing, but, unless the mange has shown itself, it had better be omitted, as, from the heat and fever occasioned by the ointment, the hounds will be continually lying on the open floors, and when under the influence of that powerful mineral, animals are more likely to take cold than at any other time. By the first of August the whole of their physic requisites to prepare them for their approaching labours should have been administered, consisting of two or more doses of salts and sulphur, as before directed; and after the old ones have been walked two or three times into a deer park and amongst hares, particularly the two and three-year olds having had a few extra bouts by themselves, the new entry may be taken out with them, and regularly exercised until cub-hunting commences, going every day, if possible, into that country where the covers are situated in which they are about to hunt. The exercise of hounds during the summer should be slow and protracted rather than quick, particularly in the early part of that season. The keeping them out with slow walking exercise does their constitutions as well as their legs infinitely more good than "long trots" or "brushing gallops."

For the sort of hound which you will find most advantageous to put forward, I will again trespass on Mr. Vyner, than whom a more experienced M.F.H. has not put pen to paper on the subject before us. No two descriptions of hounds could differ more widely than those of the late Mr. John Villebois, and those of Squire Osbaldeston, both being allowed to be first-rate judges in every way connected with hounds and hunting. The

symmetry of those of the former was, in the opinion of many sportsmen: spoilt by a loaded neck, and quarters inelegantly short, that is, short from the hip-bone to the setting on of the stern; in other respects they were perfect, with deep chests, wide backs, round ribs, and legs and feet formed to endure the incessant flint beds of Hampshire. Now "the Squire's" were, in many respects, the very opposite to these, as to some of their points; for example, he never put a hound forward that was not clever in his quarters; however, they did not give much trouble to the selector, coming as they did, nearly all fit to go forward, the result, no doubt, of first-rate judgment in the breeding of them. His good taste led him to prefer light necks, and perfectly-formed shoulders; in fact without the latter no hound can go in any country. You seldom saw a throaty hound amongst Osbaldeston's, but old Finder was an instance to the contrary, from whom he bred for several seasons, warranted by the excellency of his work on the line, and his extraordinary stoutness in the chase. Still, with all this variety in taste, there are certain rules to go by, a deviation from which must inevitably end in failure and disappointment: for instance, a puppy may be not be quite straight in his fore legs, and yet as strong and speedy as those which are as straight as darts, but then the crookedness must be at the knee-joint, and not at the elbow; if he turns his toes out from the elbows while those joints turn in, he is not worth a farthing, and if his knees bend back, a defect which is called by some "calf-kneed," as resembling the limbs of that interesting animal, he is only fit to sell to the foreigners. But he still may be a little crooked at the knee, as you stand before him, and on looking at him sideways, you may perceive that his knees are straight that way, and full of bone, with the ankles large and not bent in; if he came of a good family, and was clever in other respects, I would never reject such a hound, unless very strong in the year's entry. The next point is his ribs, both fore and aft; if he is not deep and thick through the heart, he can never have wind to chase and run up—don't try him, and if he has no back ribs, it is ten to one about his lasting through a day's work, unless he has an extraordinary good back and loins, and then he may, but he must have strength somewhere about his middle piece. I don't object to a "wheel-back," or "roach-back," as it is sometimes called; hounds so formed are generally speedy and strong, especially in hilly countries. Of shoulders I have spoken before; if in the least upright, reject them at once. As to hind-quarters, they should be chosen the same as a racehorse, but plain ones go well sometimes. The houghs should be near the ground, angular, and bony; what are termed sickle houghs are generally weak; at any rate they are very unsightly, although they may sometimes stand. Hounds which are loaded about the neck, or fleshy under the throat, or, as it is generally termed, throaty, are usually found to be slow, patient hunters, but not quick enough for modern fox-hunting; and I have, moreover, frequently observed that where extreme elegance of form existed about the head and neck, the possessor was nine times in ten, a rogue, when he had the opportunity of so distinguishing himself. The form of a hound's foot should be round and compact, like that of a cat; and although some sportsmen fancy that a more open foot is more capable of enduring hard work, my experience has always led me to prefer round hard feet, especially in a flinty country, and I am convinced that hounds which have too open feet are continually laming themselves in climbing banks, and in various other ways getting them chafed and injured. A hound ought to carry his stern up, and slightly curved over his back, although many excellent hounds travel with them level with their houghs; nor would I reject a curly-sterned hound, if good in other respects, for the sake of one of the best and truest hunters I ever knew, and that was Osbaldeston's old Rambler. As to their tongues, we can say nothing about that point till they are entered and tried; they must then learn to "speak out," and as an old writer has it, "with such tuneful notes to assemble their fellows, and give tidings to their master," when they have got master reynard on his legs, or, as Will Price once expressed himself, they should have "a nice tuning tongue" to call the others to the line.

The most extensive breeders of hounds of the present day are the Dukes of Rutland and Beaufort, the Earls of Yarborough and Fitzwilliam, Lord Fitzhardinge (late Lord Segrave), Mr. Foljambe, Sir Tatton Sykes, and the master of the Cheshire hounds.

Young hounds, after they have commenced their education, should on no account whatever be trusted at exercise, or even when moved out into the paddock, without a sufficient and effective number of persons to attend them, and prevent the possibility of their breaking away, or getting into the slightest mischief; the ice once broken, and then there is an end of all confidence in them, and if the old hounds are taken out along with the puppies to exercise, as is the case in some cockpit establishments, the matter is made a thousand times worse. I once knew an instance of a lot of wild young hounds being moved out into a field adjoining the kennel where they were kept, and where a long-tailed black pony was grazing, attended by the feeder alone; from wantonness one of the hounds bayed at the pony, which induced another to do the same, and the pony to declare his approbation or disapprobation by repeated snortings and caprioles; the main body concluded it was a signal for a rush, when away went the little horse over the fence into the adjoining lane, and away went the hounds full cry, to the dismay of the feeder and the rest of the establishment, who were so suddenly summoned by the music of the pack; however, to conclude my story, they were not stopped until they ran the

pony five miles, but without any further damage to any of the party excepting sowing the first seeds of irrevocable wildness, whenever an opportunity might offer itself. There is an old story told of the Beaufort hounds, when that pack was being first formed many years ago; a new draft of hounds, which had arrived on the previous day, were let out into the paddock to be inspected, when they commenced running the crows, which frequently fly skimming along close to the ground in windy weather; and as the old kennel man who had the care of them declared, that he believed they would have never been stopped, if they had not, by the blessing of God, changed for a jackass. Beekford also mentions the fact of the whipper-in belonging to a pack of foxhounds being thrown from his horse when at exercise, when the horse galloping off caused the hounds to break away after him, they being full of zest and wildness; after which, finding themselves without control, they commenced rioting, and, falling upon a flock of sheep, destroyed many of them before they could be stopped.

Thus far of the Hound; our next picture will find us at THE COVER SIDE, which will furnish matter for more lively comment.

#### LITERATURE.

1. *Margaret of Navarre; or the Massacre of the Huguenots*; a Romantic Tale. From the French of Alexander Dumas. Part I.
2. *The Prisoner of If; or the Revenge of Monte Christo*. By Alexander Dumas. Part I.
3. *Marie Antoinette; or the Chevalier of the Red House*. London: G. Peirce, 310, Strand.

ALTHOUGH it is not our ordinary practice to devote space to critical notices, yet there are exceptions to all rules; and we take it to be a legitimate one, that we can here recommend to our readers, many of whom might not otherwise be aware of their issue, a series of translations of works of fiction of the highest class, produced at a price, and with a neatness of printing and embellishment, (to say nothing of the literary merit of the works themselves), which forms a contrast as pleasing as it striking, with the vamped-up, fetid filth, and barbarous block-chopping, accompanying the morbid, maudlin, muddy, murderous muck which has at length earned the distinction and appropriate title of "Lloyd Literature." We have here in monthly parts and weekly Nos., three of the choicest productions of an author who ranks as high in France as Scott, Galt, Bulwer, or James in this country; and at a price which is not a whit beyond the cheapest *reprints* of works of which the copyrights have utterly expired. The books, too, are uniform; and may be had for a sum not exceeding a few shillings in the whole. They comprise the *elite* of the works of the celebrated Dumas (at least those, the popularity of which has stamped the impress of public approval), in neat small octavo volumes, with steel title-pages and frontispieces, and of a neatness that will do credit to the book-case, as the contents will mark the taste of their purchaser and reader.

We trust to see these better productions of our French neighbours flourish in their transplantation to the garden of English literature; for, heaven knows, our principal imports from that field have been of its most purulent, poisonous, and noxious weeds.

**BITING HORSES.**—I never knew an instance of a biting horse being cured of the vice, and for this reason, we never hit upon any expedient (at least I never heard of one) that would make him, like the boy striking the wall, hurt himself; if we could find any mode of doing so, he would be cured at once. A somewhat curious mode of doing this appeared in the public prints, namely, to give the horse a hot roast leg of mutton to seize. Absurd as this appears, it is really not so much so as many things that are done towards horses; in fact, if a horse was addicted to biting legs of mutton, it would be a rational and certain way of curing him of the propensity; but as legs of mutton do not often come in his way, and arms of men frequently do, unless he was stupid enough not to be able to distinguish the one from the other, I fear the mutton plan could not avail much. Now if we could cover a man with a coat of mail with inviolable spikes standing from it, two or three times seizing the man would, I doubt not, radically cure the horse, not of his disposition to bite, but of attempting to do so; but as we cannot well do this, I believe a short stick, and keeping an eye on him in approaching or quitting him, is the only thing to be trusted to. Flogging him after he has bitten will tend to increase his propensity to do it, for this reason—it is either dislike to man or fear of man that makes him bite; he seizes us to prevent our hurting him, or in revenge for having been hurt; consequently, punishing him only confirms his fear and hate; so, probably, if we do this, and he finds he dare not bite, he tries the efficacy of a kick.—*Sporting Magazine*.

**WILD FOWL.**—The early appearance of wild fowl in the lake districts is generally considered indicative of a severe winter. A few days ago a large flock of wild geese were seen near Windermere, flying unusually near the ground. Other species of wild fowl have also made their appearance on several of the Cumberland and Westmorland lakes, which afford fine sport for the fowler.

## COURSING AND THE GREYHOUND.

(Continued from page 510.)

## SECTION VI.

## TRAINING GREYHOUNDS.

HE training, or, in other words, the getting of greyhounds into running condition, resembles in a great measure the preparation of most animals for similar purposes, all efforts combining towards the same end; viz. speed, wind, and stoutness. There may be various opinions concerning the best method of accomplishing these purposes; yet I fancy there exists but one as to the necessity. The interest which is excited by turf competition continues to increase, and the stake which many are induced to hazard upon such events receives no diminution from the pressure of either times or circumstances, so that, amongst a certain class, the events of the Derby and Leger are more frequently discussed and more anxiously anticipated than the downfall of a dynasty, a New Railway Speculation, the Repeal of the Corn Laws, or a change of ministry. In an age where science has made such rapid improvement, and where its principles have been so generally diffused, it would have appeared extraordinary if they had not manifested themselves equally in matters of high and minor importance; and, I believe, at this moment the knowledge of training has acquired a character far beyond that of any former period. To assist us, however, in this pursuit, something more is necessary than the mere experience of stable exercise, and a proper understanding of constitutional powers can alone perfect the attainment. It must be obvious to all, but more particular to him whose habits are that way disposed, how nice a matter it is to form a correct judgment of the full and effective power of those animals whose physical capabilities we are inclined to prove, and what a long acquaintance we must have with various seeming inconsistencies to enable us to draw any tolerable degree of accuracy and conviction. The smallest deviation from accustomed regularity will frequently overthrow the most scientific system, and those events which to an experienced person appear the most trifling, are sometimes of a magnitude to blast the fairest promise of fancied triumph. I mention this particularly to shew what little dependence should be placed upon the expected performances of any animal without his previous preparation be thoroughly established, and even how liable he is in every stage to suffer a relapse from the slightest degree of either real or seeming neglect. From a certain knowledge of his ground, and the distance he is to run, a horse can be most assuredly brought fitter to the post than a dog, and his exercise also may be more or less severely proportioned: now the work of a greyhound for instance, or a hound, cannot be forced upon him to a degree we should probably wish, and the only expedient which is left to us is to endeavour to effect this in a great measure by constant stratagem; as if you were to course your dog too frequently or too severely, (and from the uncertain length of courses this might unavoidably happen) he might chance both to lame and overwork himself: all therefore we have to do is to give him that kind of exercise and food which shall enable him to go stoutly through a long course, and with a degree of superior speed in a short one; and this, I shall endeavour to describe in a manner which I flatter myself upon trial the reader will approve; it was communicated to me by a friend whose uniform success, and long experience gives him the best claim upon our attention. I confess, however, I do not like running greyhounds too young; with horses we may do it, as their work can at all times be proportioned to their age and strength; but the former exerts himself from the natural impulse of a violent appetite, and which cannot be allayed without the object which provokes it is either overtaken or removed. On this principle then, I certainly object to bringing out a greyhound, especially in public, before he is eighteen months old; and, as I look upon a dog to be in his prime betwixt the ages of two years and a half and five, every encouragement should be given him to perfect his maturity before he contends for the honour of his breed.\* It may be said, perhaps, that running whelps together is not so likely to injure either, as classing them with more experienced dogs, where a laudable effort of emulation might eventually prove injurious; but it is an experiment which in neither case do I recommend, and my reason for disapproving it is the many evil consequences so frequently witnessed from its adoption.

Before you proceed to enter upon a training system, be very certain that your dog is in good health, and let him be rather high than low in flesh, and take him up fourteen days before the time of running; provided he is in both respects as above stated, this will be sufficient for the period of his training, but if he is not so, it must be extended according to the urgency of the case. Commence your operations with two doses of physic, allowing a couple of days to intervene betwixt the administering of each dose; and this physic should be given over night, as its effects will be more beneficially promoted, and the ease of your dog considerably assisted. On the morning of the fourth day he must be taken out

early, and allowed to run about and stretch himself (only upon turf) for half an hour, then brought home and fed; in the evening again taken out, and his exercise be something stronger for the same space of time, and afterwards brought home and fed: on the following day the same rules must be observed with this difference, that his exercise (in the morning particularly) be more severe, and he must now also be taken out from eleven till one in the middle of the day in addition to what I have already named, but only for the benefit of air and water. On the sixth day, if all things proceed as you wish, you may venture upon a course, and also on every third day until he runs; on which days I think it advisable that he should not be out longer than three hours, and if possible to avoid looking for a hare to any tedious length. The plan of exercise morning and evening which is generally pursued is as follows; let a person hold your dog until yourself on horseback get to a considerable distance from him, then halloo him forward for about a mile at his speed, coaxing him at the end, and making every possible demonstration of real pleasure; this work may be increased or diminished according as you see a necessity for either, but the dog that can take it regularly and keep strong, is the most likely to prove well on the day.

The next thing to be considered is the food, and its effects as to reality and appearance. In times of scarcity it may be thought somewhat out of character to recommend articles of consumption by many not to be procured, and by others even considered as occasional luxuries; as it is my object, however, to give the results of experience, and to write what I know, I trust candour will save me from any idea of unnecessary indulgence. The meat you are to give must be good beef or mutton boiled, but not to excess, and as the liquor or broth should on no account form any part of it, you will be careful to prevent the waste of that which is most nutritious: this must be assisted by eggs, lightly poached, given occasionally in the morning, and bread made according to the following recipe: take of the best flour two-thirds, and of oatmeal one, and of the whites of eggs in the proportion of eighteen to a peck loaf, with a little yeast, working the whole well up with good ale: about equal quantities of each (bread and meat) must be given at the times I have stated, and after a course you will find a sop in the pan an excellent relish. In the course of preparation you will probably observe a frequency of constitutional changes in your dog, and which can only be assisted or removed by a close attendance to the hours of feeding and exercise, and allotting them as your judgment may direct.

The great art of training appears to consist in bringing your dog to the post without any material reduction in flesh, and only taking especial care that what he has got on him may be perfectly corky and light; in fact every part about him should be as elastic as possible, and, quite contrary to that most erroneous of all opinions that he should be as hard as a board, he cannot feel too compressed and springy. It is not, however, in my power to direct you in these matters with any degree of certain success: experience can alone render you competent to decide, but I think I may with truth venture to affirm that these hints will not mislead, and as they are in no sense contrary to reason, so will the result be favourable to the wishes of the experimenter. Cleanliness is moreover a grand consideration, and all the minutiae of the brush and the wisp should be as rigidly attended to as with those animals that more apparently require them: I am not an advocate for clothing; clean hay is the best litter, and, as it never harbours any description of vermin, will be found very preferably to straw. Above all, be regular in your attendance, morning and evening; and should the weather, at your stated hours of exercise, but not exactly to your mind, take the first advantage of a favourable moment to reclaim that you may have lost. I think no dog ought to undergo more than three preparations of this kind in one season, and as it will not do to have him always under a regular course of training, the intermediate space must be considered as one of pastime and relaxation.

I have thus brought the reader to the post, and before we start for the prize, I will devote a couple of sections to the Laws of the Leash, and some observations on the office of Judge, or, as he was formerly called, the *Tryer*.

**TOTAL ABOLITION OF SMOKE.**—The Duke of Wellington has prohibited smoking in the army. Queen Isabella has forbidden smoking to the Spanish students. The King of Naples, too, we understand, has sent a similar prohibitions to Mount Vesuvius. If these prohibitions are carried on much further, there will be nothing left shortly in the way of smoke, excepting the Queen's Speech.

**UNREMITTING KINDNESS.**—A comedian went to America, and remained there two years, leaving his wife dependent on her relatives. Mrs. F.—t expatiating in the green-room on the cruelty of such conduct, the comedian found a warm advocate in a well-known dramatist. "I have heard," says the latter, "that he is the kindest of men, and I know he writes to his wife every packet." "Yes, he writes," replied Mrs. F., "a parcel of flummery about the agony of absence, but he has never remitted her a shilling. Do you call that kindness?" "Decidedly," replied the other, "unremitting kindness."

\* The most proper time to enter greyhounds is a bitch at twelve, and a dog at eighteen months old, and that both are at their best at the expiration of six months from their respective periods of entrance.

\* In general the meat should be rather under-done, but varied as your dog is high or low in flesh, well done if the former, and in the opposite extreme when otherwise.

## HUNTING A BAGMAN.

The following lively description of a singular fox-chase is from the pen of R. T. Vyner, Esq.

"I may have once or twice in my life hunted a 'put down fox,' as it is sometimes called; but it is a custom I never approved of, nor have I ever known any good judges of hunting who recommended it. I once killed a fox in rather an extraordinary manner: he was not a bagman, although he appeared to have been just shook from the soot-sack of a chimney sweeper. The facts were as follows: I was sitting late one winter evening, and just upon the eve of retiring for the night, when a neighbouring farmer brought me a fox in a large basket, which he had just taken in an outhouse. As everybody was gone to bed excepting myself, and not being able to shut him up in a better place of security, I left him in the room where I was then sitting, for the night, and gave orders that he should not be disturbed till I came down in the morning; however, the next day, a maid-servant, going in to light the fire as usual, about seven o'clock, opened the shutters, when the fox, perceiving the light, jumped from the chimney where he had gone to ground, and darting through the window like a rocket, made his escape. I was immediately informed of the departure of the prisoner, and, perceiving that a heavy storm of snow had fallen, it being ankle-deep and still snowing, and the chance of hunting on that day at the regular hour being completely gone, I ordered the horses to be saddled; and in less than ten minutes they were out, the men mounted, and every hound in the kennel (forty-one couples) on the line of the fugitive: it proved to be a most burning scent, and, after a sharp burst of about two miles, we killed him as he was running in a direct line for a well-known head of earth; if the scent of reynard was good, the smell of the soot was much more pungent, as it might be winded the whole way. The animal, when killed, certainly looked like a hunted devil, and the hounds, after they had eaten him, appeared as if they had had their mustachoes blackened for a masquerade. The hole through which he had escaped was triangular, exactly the shape of his head, and so small that it seemed impossible for him to have forced his way through it. He had been during the night up and down the chimney some dozen times, as might be seen by the black marks all over the room. He had tried the chimney-piece, pictures, all the chairs, and had entered, as far as he could, into a hat and two caps which were on a table, to try to find an exit. This calls to my remembrance the anecdote of—

"Mr. Stubbs, a crack rider no doubt in his time,  
Who hunting on Sunday considered no crime."

He kept a pack of harriers, with which he used occasionally to hunt bag-foxes, and his plan for getting them into condition was, to shut them up in a small place, with a hole to admit the light about six feet above their heads, at which they would continually employ themselves in jumping, to endeavour to escape, and by that means get into good wind and condition."

I must here be permitted to write a few words on the cocktail and unmanly amusement of bag-fox hunting. I cannot but express my surprise and disgust that any one, calling himself a sportsman, should be found to advocate the practice of so barbarous and pitiable a substitute for hunting. Let the hard riders of Ireland catch their foxes in the mountains, and shake them in the plains, if they please; or let the English residents at Naples solace themselves with a four mile gallop after an unfortunate cur-dog, rendered more than half mad by a good shaking, and then ejected from a sack; but never let that gallant animal, the fox, be tortured or vanquished in any other manner than by legitimate hunting.

Some owners of packs have been known to possess a fox that has lasted their hounds for half the season, when, by a little mobbing and manœuvring, they have been enabled to pick him up by the brush, and thus save him before he could be injured by the hounds, then reconduct him to his dungeon, and reserve him for another day's torture. Talking of making a fox "do for twice" puts me in mind of a story told of Jack Shirley, who so long hunted Sir R. Sutton's hounds, some years ago. He was out with the hounds of a noble lord, which hunted within reach of the country where he lived, viz., the Barton, when, after a severe run, every one being beaten off but himself and a hard-riding young farmer, the hounds caught hold of their fox. Shirley, who was close at hand at the moment, took him from them uninjured, and, cutting off his brush, pitched him over the hedge, which, being an awfully thick one, allowed master reynard time to escape to some distance, refreshed as he no doubt was by the galvanic application of the knife, before the hounds could get once more upon his line. Just as Shirley had climbed into his saddle, the huntsman of the pack and the rest of the horsemen came up, but too late to witness the operation. After about half a mile more running, the fox was killed the second time, when the regular huntsman took him from the hounds, and was about to cut off his brush and present it to Shirley, who had requested to have it: what was his astonishment when he found it gone! It certainly was a strange and wonderful occurrence; he was first up; no one could have got it, or he should have seen him taking it; he looked round amongst the hounds to see if one of them had pulled it off in worrying their fox—no; it was not there! When Jack Shirley pulled the brush

from his pocket, and in perfect good humour threw it to his brother knight of the couples, giving him the following piece of advice:—"The next time your hounds are killing their fox, take care and stick a bit closer to 'em, or maybe I shall cut his brush off again before you, if I happen to be out, Master W—." The late Mr. Mytton was, I am sorry to record it, rather addicted to bagfox hunting; but this arose from that innate impetuosity of disposition which marked all his actions through life. On one occasion he absolutely turned out a fox during a hard frost and deep snow, and then letting out the whole pack, unattended by any horseman, retired with his visitors to the top of the house at Halston, to see what he termed the fun; after this frolic some of the hounds did not return to their kennel for two days. On another occasion the turning out of a bag-fox was attended by circumstances of a more ludicrous nature, and, as it proved, was a capital *exposé* of so childish an amusement. At the period above alluded to, the man who had the shaking of poor Charley had strict orders to make himself invisible as soon as possible after he had enlarged his charge, either by treeing like a martin-cat, or in any other way he thought best. But whether the fellow considered the servants' hall at Halston was the most retired spot in the neighbourhood, or whether he was compelled by the pangs of hunger, occasioned by two hours' close watching in the wood previous to the hounds being thrown off, has never been decided; he was determined, however, to "break cover," and, creeping along a thick hedge in the opposite direction to the field where the horsemen were collected, he escaped nearly to the house. The hounds, who had found the fox, but in a ring which he had described in the cover, changed for the line of the bearer, who, being lazy, had dragged the bag along the ground instead of carrying it, when they fairly ran into him full cry, in view of the whole field, who were no doubt much amused at the stupidity of the fellow who had marred the plot.

A "Friend to all Sports," in an excellent letter which appeared in a popular sporting weekly paper some short time ago, very justly observes—"Give each sport its fair patronage; encourage fox-hunting with foxhounds, hare-hunting with harriers, but do not encourage them to interfere with each other's game, and, above all, let the non-hunting portion of the community know, that half the pleasure of the chase consists in giving the hunted animal a fair chance—a bag-fox never has! You might as well expect a convict escaped from the condemned cell of Newgate to run as stout as a trained pedestrian, as a bag-fox to show the sport of a wild one.

**EXTRAORDINARY FIND.**—While a gentleman was looking at the salmon essaying to pass Powick weir the other day, his dog, a bitch of the Newfoundland breed, discovered a very curious magazine. She begun scratching and sniffing violently at a rat-hole situate under a beam at the extremity of the weir, and some couple of yards from the water; guessing there was something extraordinary there, it was examined, when it was found to contain nineteen lampreys, all alive, and in good order, which some fishermen insisted had been stored by the rats. As the water had not reached the spot for a long time previous, the lampreys clearly had been carried there by some means, and the fishermen say that the rats are continually in the habit of robbing their putcheons.

**A PRIZE PEASANT SHOW.**—The custom of stuffing cattle to an unnatural degree, is, we are told, desirable, for the purpose of improving the character of stock, and we should be very glad to see the experiment tried of improving the characters of peasants and agricultural labourers by feeding them. We should very much like to have an annual show of prize poor got up in the numerous districts where the "friends of the working man" are so very busy in cramming cattle with all kinds of herbaceous luxuries. If a good quantity of fat stock is a sign of their owner being a good farmer, surely a good quantity of plump, portly-looking labourers would be a testimonial to the goodness of their employer. We fear, however, there is no chance for any experiment being made which would involve the necessity of generous dieting. There is a much greater probability of a competition between the Norfolk and Buckland principles, by a show of rival peasants, fed respectively on peas, starch, and mangel-wurzel, or the celebrated promoter of warmth lately introduced to the notice of the poor in the shape of curry powder. We can fancy what a capital catalogue could be made up from the materials of such an exhibition. No. 1. A short-legged Norfolk labourer. Fed on boiling water and curry powder. Walked 30 miles to the exhibition. Bred in the Norwich workhouse. 1st prize.—No. 2. A Hampshire labourer. Supported entirely on starch. Brought in a cab half a mile to the exhibition, by Dr. Buckland. 2nd prize.—No. 3. An old bankrupt thimble-rig proprietor, who since the abolition of gambling at races has been living entirely on his remaining stock of peas, with a slice of mangel-wurzel twice a week, and a little starch on Sundays, 3rd prize. We think that in order to make the rivalry complete, the union workhouse should be allowed to send in a limited number of paupers for competition.—*Punch*.

**WILD GESE ON WINDERMERE.**—On Sunday night last a "gaggle" of wild geese, twenty-four in number, was seen on Windermere lake. At times they flew very low, and were within gun-shot, partly owing to the hazy mist. Notwithstanding it was Sunday, many would-be sportsmen were out with their old "Copenhagens" pelting away at the poor geese.—*Westmoreland Gazette*.

## ANECDOTES OF THE HORSE.

The following anecdotes appear in the 68th part of *Knight's Weekly Volumes for all Readers*, (just published), "The History of the Horse;" by Mr. W. C. L. Martin:—

"A curious circumstance came under the personal notice of Col. Hamilton Smith, at once proving both the memory and attachment of the horse. The Colonel had a charger in his possession for two years, which he left with the army, but which was brought back and sold in London. About three years afterwards the Colonel chanced to travel up to town, and at a relay, on getting out of the mail, the off-wheel horse attracted his attention. On going near to examine it with more care he found the animal recognising him, and testifying its satisfaction by rubbing its head against him, and making every moment a little stamp with its fore feet, to the surprise of the coachman, who asked if the horse was not an old acquaintance. It was—it was his own old charger.

"A lady, remarkable for benevolence to the brute creation, observed from her garden-gate one day a miserable horse, with the shoulder raw and bleeding, attempting to graze on an open spot adjacent; having, by means of some bread, coaxed the poor animal to the gate; she then managed, with some assistance, to cover the wound with adhesive plaster spread on a piece of soft leather. The man to whom the animal belonged (one of those ignorant and careless beings who are indifferent to the sufferings of any but themselves) shortly afterwards led the horse away. The next day, however, the horse made his appearance again at the gate, over which he put his head and gently neighed. On looking at him it was found that the plaster was removed, either by the animal's master or by the rubbing of the ill-made collar in which he worked. The plaster was renewed. The third day he appeared again, requiring the same attention, which he solicited in a similar manner. After this the plaster was allowed to remain, and the horse recovered; but ever after, whenever it saw its benefactress, it would immediately approach her, and by voice and action testify its sense of her kindness and notice. This anecdote, for the truth of which we can personally testify, proves how sensible the horse is of humane treatment, and how grateful for benefits bestowed. Considerate treatment and every care are due to an animal from whose services man derives such important benefits; but too often does man forget that he has a duty to perform, not only towards his fellow-man, but towards those domestic animals which Providence has intrusted to him for his welfare.

"We know nothing that shows the docility of the horse more than the feats it is taught to perform in the 'spectacles' of the modern circus. To lie down and rise at command, to perform various tricks at given signals, to feign death, to take its part as an actor in mimic combats, to endure with patience the bizarre actions of the laugh-exciting buffoon, are among the lessons which it is taught, and which it admirably executes. In docility there is no comparison between the horse and the ass; for though with kind treatment the latter is more tractable than is generally supposed, still its disposition is not so pliable, nor its tractability so complete, as that of the horse; and we doubt whether it could be brought to supply the place of that animal in the exhibitions alluded to. It has not the mercurial fire and the mettle of the horse, but is more staid and sober—at least in our climate; indeed from old times its stubbornness of disposition has been noted, in contrast with the generous temper of the horse; though it must be confessed that among horses there are many exceptions to the rule, and occasionally we meet with animals exceedingly vicious and obstinate; but in most cases they have been spoiled when young by improper severity.

"A curious instance of the cunning and memory displayed by the horse is exemplified in the following anecdote from the 'Plain Englishman.' The late General Pater, of the East India service, was a remarkably fat man: while stationed at Madras he purchased a charger, which after a short trial all at once betook itself to a trick of lying down whenever the General prepared to get upon his back. Every expedient was tried without success to cure him of the trick; and the laugh was so much indulged against the General's corpulency that he found it convenient to dispose of his horse to a young officer quitting the settlement for a distant station up the country. Upwards of two years had subsequently elapsed, when, in the execution of his official duties, General Pater left Madras to inspect one of the frontier cantonments. He travelled, as is the usual custom in India, in his palanquin (a covered couch, carried on men's shoulders). The morning after his arrival at the station the troops were drawn out; and as he had brought no horses, it was proper to provide for his being suitably mounted, though it was not easy to find a charger equal to his weight. At length an officer resigned to him a powerful horse for the occasion, which was brought out duly caparisoned in front of the line. The General came forth from his tent and proceeded to mount, but the instant the horse saw him advance he flung himself flat upon the sand, and neither blows nor entreaties could induce him to rise. It was the General's old charger, who, from the moment of quitting his service, had never once practised the artifice until this second meeting. The General, who was an exceedingly good-humoured man, joined heartily in the universal shout that ran through the whole line on witnessing this ludicrous affair."

**EXTRAORDINARY SAGACITY.**—A singular instance of canine sagacity occurred near Horsham. Mr. A. Blackiston, the landlord of the Queen's Head Inn, Horsham, went with his horse and cart to Newick on Saturday last, and took with him his dog, a very sagacious animal of the terrier tribe; but soon after his arrival at Newick his dog left him and returned home, and remained there all day Sunday and Monday until six o'clock in the evening, when he was seen to go on the road to Newick, and proceeded as far as Burchenbridge-mill (a very dark and lonely spot, about one mile and a half from Horsham,) when he must have heard his master coming, as he struck up howling, as if to warn him of approaching danger. (Mr. Blackiston heard a howling as far as a mile on the road.) The dog waited there and continued howling until Mr. Blackiston came up; then appearing very much pleased, trotted a few yards' distance before the horse for about two hundred yards, when, all at once, he flew in the face of a man concealed in the hedge, and immediately another man sprang out of the other side of the road and tried to catch the rein of Mr. Blackiston's horse, but, being alarmed so suddenly by the dog, missed his aim, and of course Mr. Blackiston made as fast as possible for home. Now, there may be many questions arise from this. How came the dog to go off just at six on Monday evening? How came he to know his master was coming that night? How was it he was as far as the mill and then began howling? To these questions we can make no satisfactory reply, except as regards the last; we conclude the animal must have seen these men standing behind the hedge, but then he must be possessed of more than usual sagacity to suspect them of mischief. All we can say is, it is a fact.—*Brighton Herald*.

**THE BIRDS IN ST. JAMES'S PARK.**—This collection, which belongs to the Ornithological Society, at the present time contains upwards of three hundred birds, including twenty-one species, and fifty-one distinct varieties. Although some of the specimens occasionally wander to some distance, but few comparatively are lost, as they generally return, even after a long absence, the secluded plantations and islands being quite congenial to their habits.

**AGRICULTURAL REPORT FOR DECEMBER.**—Notwithstanding we have now arrived at the close of 1845, the atmosphere during the whole of the past month has been extremely mild and vegetative. In all parts of England, as well, indeed, as throughout the United Kingdom, farm labour have progressed remarkably well, and it affords us great pleasure to be enabled to assert that the winter wheat plants are every where represented as looking strong and healthy, although they stand much in need of a sharp frosts to check premature exuberance.—*Farmer's Magazine*.

**THE SALMON FISHERIES.**—With the last day of the year terminate the 'close season' for salmon in the river Severn and its tributaries, and on New Year's Day it was again lawful to take seasonable salmon. We use the word seasonable, because at the very early period at which, by the present law, the season commences, there are so many spawning fish in the river. Fortunately the present high floods will bring down the spawn before the netting begins, and consequently a vast number will be saved for next year's supply. The late high waters have been most favourable for the spawning season.

**RAILWAY SCALE OF MANNERS.**—We have often been struck with the difference of manner assumed by railway officials towards different people. Shut your eyes, and you can tell from the tone of their voice whom they are addressing. The following examples will best illustrate our meaning. The railway potentate is calling upon the passengers to get their tickets ready. He calls:—"To the third class (*fortissime*), 'Tickets, tickets, come get your tickets ready.' To the second class (*forte*), 'Tickets, gents; get your tickets ready, gents.' To the first class (*piano*), 'Get your tickets ready, gentlemen, if you please; ticket ready, if you please, gentlemen.'—*Punch*.

## THE SPORTSMAN'S ADDRESS TO HIS HORSE.

My noble steed, my gallant grey,  
Thou well deserv'st my song!  
For ne'er was seen the pace of day  
For thee too fast or long.

A roadster good, not straddling high,  
Nor shuffling low I find thee;  
But stepping straight and cheerily,  
Thou leav'st the miles behind thee.

At cover side, not wasting force  
In fretting like a novice,  
Thou calmly ey'st the prickly gorse,  
And wait'st to hear the office.

But when he's gone!—then like a bird  
Thou clearest rail and river;  
No weary sob from thee is heard,  
Nor gives thy tail a quiver.

And when at night we home return  
Thou need'st not gruel thin,  
But greet'st with welcome neigh thy corn,  
Clean sifted, from the bin.

# ADVERTISEMENTS.

**THE MAMMOTH HORSE. — MR. CARTER'S** Colossal Horse continues to attract crowds of sitors, but as he will positively leave town in a few days for America, Mr. Carter begs to remind those persons who have not yet seen this remarkable animal, aptly termed the "Model Horse," that the present time is the only opportunity they will have of viewing the largest horse in the world. Count D'Orsay says, "he is a magnificent animal." The Mammoth horse is 20 hands in height, and weighs 2,500 lbs. He will be exhibited at the Egyptian Hall, Piccadilly, from 11 a.m. till 9 p.m. Admission, 1s.

**G. Y. BALL,**  
REGISTERED DAGUERREOTYPY PORTABLE  
LOOKING GLASS.  
**NOVELTY, UTILITY, CONVENIENCE,  
COMFORT, AND ECONOMY.**

**THE DAGUERREOTYPY LOOKING GLASS.**  
If you value personal comfort, neatness of appearance, cleanliness and acceptability at the social board, or the society of the fair sex, provide yourself with the last triumph of cheapness, ingenuity, and utility. It is a portable pocket mirror, in a brass case, suited to suspend against the wall, hold in the hand, lie flat, or be self-supported at an angle of forty-five degrees on table or shelf, presenting in a conspicuous form a looking glass, a shaving reflector, and an invaluable counsellor after the heat of the race, the ride, the promenade, or before the entering a ball room, and in fact no person ought to be without one.

To be had Wholesale and for Exportation at 86, Newgate-street, London.

**SHIPPERS, MERCHANTS, AND COMMERCIAL TRAVELLERS** are respectfully requested to inspect the **DAGUERREOTYPY LOOKING-GLASS.** It will be found the most novel, useful, attractive, and saleable article at home and abroad, in the City or the provinces, ever offered to their notice. The Registered Proprietor and Manufacturer, **G. Y. BALL,** is prepared to execute orders to any amount, for the various sizes of the **DAGUERREOTYPY** Looking-Glass, on terms particularly advantageous to dealers.

THE MOST POPULAR WORK OF THE DAY.  
On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence  
Volume I. of  
**THE MYSTERIES OF LONDON,**  
By **George W. M. Reynolds,**  
Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.  
\* \* This magnificent volume contains 424 royal octavo pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies.  
London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

EVERY MAN HIS OWN HARNESS MAKER.

**THE DURHAM DUCIE HUNTING AND TRAVELLING KNIFE.**—J. B. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of noblemen, sportsmen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.  
By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

"Windsor Castle, Oct. 4, 1845.  
"Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

**BILE! BILE! BILE! — WORBOYS'**  
**VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual costiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½d., and 2s. 6d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.  
N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

**UNDER ROYAL PATRONAGE.**  
Instant Relief, and a Rapid Cure of Asthma and Consumption, Coughs, and all Disorders of the Breath and Lungs, is insured by

**DR. LOCOCK'S PULMONIC WAFERS.**  
It is not possible in the limits of this Notice to give any great number of the immense mass of Testimonials which are constantly received by the Proprietors. The annexed will, however, be read with interest.  
The following Testimonial is from Mr. F. C. Ladbury, Surgeon and Accoucher, Wednesday.

"Sept. 6th, 1845.  
"Gentlemen,—I have proved your Pulmonic Wafers to be most efficacious in ALL Pulmonary Affections, and a powerful sedative in Diseases of the Heart. The combination I consider especially good, as it relieves without producing any of the unpleasant sensations in the head so generally caused by all other anodyne and cough medicines.  
(Signed) "F. C. LADBURY."

Another Cure of Cough and Improvement of the Voice.  
The Declaration of Mr. Hamlyn, Clerk of Unicorn Chapel, Tooley-street, London.  
Dated, 7, Albion-place, Waltham.

May 15, 1845.  
My attention was first attracted to Dr. Locock's Wafers, by their having cured my wife of a bad cough and cold, for which she had been a considerable time under medical treatment without effect, and perceiving that they were recommended for the voice, and as I often suffered from hoarseness and a tightness of the chest, I took a few, and found the most perfect and immediate benefit from them; and ever since, if I take cold, or have any hoarseness or huskiness of the voice, on taking two or three Wafers it is immediately removed. I also find that they certainly improve the voice, increasing its power and flexibility.  
The particulars of hundreds of Cures may be had from every agent throughout the kingdom and on the Continent.  
DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.  
Price 1s. 1½d., 2s. 6d., and 11s. per box. W S W  
Agents: DA SILVA & Co., 1, Bride-lane, Fleet-street, London. Sold by all Medicine Vendors.

**THE EARL OF ALDBOROUGH**  
CURED BY

**HOLLOWAY'S PILLS.**  
The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY.  
Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box, and a Pot of Ointment in case of any of my family should ever require either.

Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.  
These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines THROUGHOUT THE CIVILIZED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.  
N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**  
on the infirmities of the Generative System in both sexes; and on the loss of reproductive power, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Sympoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Tottenham-street; Purkiss, Compton street, Soho, and all Booksellers.  
The CONCENTRATED DETERGENT ESSENCE.  
The anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIER.

### CHAPTER XL

THOMAS MOLINEUX—(concluded.)

FROM the time of this important and all-absorbing contest upwards of eighteen months elapsed (until March 31, 1813) before Molineux met with a competitor, (in Carter, though he had publicly challenged all England; this contest, however, did not take place, owing to Richmond arresting Molineux.

A short time after this match was off, Molineux was engaged in a brush with Power, the cause of which has been variously related. Power having been dealt with by Richmond not in a way satisfactory to his feelings, had publicly declared vengeance against the man of colour; and on meeting with Molineux at the house of Richmond, some words

ensued, in which Power committed himself in some observations on colour which were resented by Molineux; a challenge followed, and the men immediately stripped, to decide the affair of honour in the street. It was a most irregular contest, and impossible to be described with any degree of accuracy; but the science of Power was visible, and he milled the nob of the Black in good style and got away; yet still Molineux was too heavy for him, and upon closing in the crowd science proved but of little advantage. At times they both fell, and after seventeen minutes of considerable confusion this row ended: the friends of Power interfered, deeming it advisable that he should no longer contend with so powerful a man as Molineux.

The following paragraph having appeared in the Leicester paper of Feb. 3, 1813:—"Jay, the pugilist, has challenged Molineux to fight at any notice; but Blackee remains both deaf and dumb to this challenge, as

he did to Cribb's immediate acceptance of a vaunting challenge to him. The Champion promises him a love-dressing for his bounce, if he could be prevailed on to come to London."

To which Molineux thus replied—"I, the said Molineux, do declare, that I never received any challenge, but through the medium of your print, but I am ready to fight Jay at any place, within the county of Leicester, for a sum not exceeding 200*l*., if accepted within one month of the above date. In opposition to that part of the paragraph which relates to Cribb, I do declare that I sent him a challenge within two months, but I have received no answer; my friends being mentioned in the challenge, who would back me to any amount; and that I have never received any challenge from Cribb since I last fought him.

N.B. Letters left at the Post-Office, Leicester, will be duly attended.

The mark of THOS. MOLINEUX.

Molineux was also a pretty good wrestler, and displayed great activity and powers at the Exeter meeting of July 27, 1812, where he entered himself for the public prize of Ten Guineas, but received a dreadful fall from John Snow, of Moreton.

After his second defeat by Cribb, Molineux became an object of attack to such boxers as aspired to the top of the tree, and Scotland was the theatre of his exploits. From his irregularity of life at the period, (May 1814,) when he entered the ring with Fuller, he was nothing like the pugilist who first entered the lists with Cribb. Molineux came to this country with milling requisites inferior to none, stamina sound and vigorous, Herculean strength, wind undebauched, and confident in himself that he was equal to any pugilist that could be found. It is but justice to state that when Molineux first stripped in England, his appearance was extremely imposing; his muscular development fine in the extreme; and his frame manliness itself. Although the sporting world preferred having a white to a black pugilistic champion, and an Englishman's wearing the cap was more congenial to their feelings than an American, still it was impossible the courageous qualities of Molineux could be passed over with indifference. In fact, his milling pretensions had made a strong impression on the fancy in general, and the higher flights of the boxing circles endeavoured to console his defeats by liberal presents. Cash flowed in fast in upon him, and the generosity of the swells left him little to envy except the proud title of conqueror. The Black had a natural taste for gaiety—a strong passion for dress—was amorously inclined, and full of gallantry; it is not surprising, therefore, that the Black Samson found many mercenary Dalilahs, and

Plung'd  
In general riot, melted down his youth  
In different beds of lust, and never learn'd  
The icy precepts of respect, but follow'd  
The sugar'd game before him.

With togs of the best quality and fashion, the man of colour soon appeared a swell of the first magnitude. Maintaining, then, the highest secondary rank as a boxer, he dashed about the metropolis, regardless of future consequences to his milling fame. Pleasure was the order of the day with him, and the stewards of the capital tended not only to ease him of his blunt, but soon undermined that overwhelming power and pluck, so conspicuously displayed in his terrible combats with the mighty Cribb.

The consequences of such a line of conduct need be scarcely dwelt on; the iron-frame of the Black soon seriously felt the dilapidating effects of intemperance. Yet, notwithstanding this visible falling off, Molineux, with all the drawbacks of enervating excess, was not to be beat off hand, and none but a boxer of more than common skill and strength seemed likely to accomplish this task.

Fuller, whose character for science and game entitled him to every consideration, fancied he was able in every respect to contend with this renowned milling hero, and the amateurs of Scotland, in order to facilitate a match between them, entered into a subscription, purse of 100 *g*., to be fought for in a forty-foot ring. Early in the morning, on the day appointed for the above trial of skill to be decided, Friday, the 27th of May, 1814, at Bishopstorf, Paisley, Ayrshire, the fancy were in motion. Numerous vehicles of all descriptions were seen rattling along the road to the scene of action, and scampering pedestrians out of number, to witness the novelty of a prize-mill in Scotland. Some thousands of spectators formed the ring, and upwards of one hundred carriages belonging to gentlemen were upon the ground. Molineux was seconded by Carter, and Fuller had the veteran Joe Ward and George Cooper. Five to four on the Black. At one o'clock the ceremony of shaking hands was performed, and the men set-to. Both the combatants displayed good science; but the blows of Fuller, although he put in several with much dexterity, appeared more showy than effective. However, on Fuller's planting a desperate ribber, Joe Ward ironically observed, that "if he continued to hit his man so hard, they should all be baulked, and the fight be over too soon." The battle had continued only eight minutes, when the sheriff of Renfrewshire, attended by constables, entered the ring, and put a stop to it in the 4th round. Both the combatants appeared much chagrined, particularly Molineux, who vauntingly declared, "had he foreseen such an interruption, he would have finished off his opponent before the arrival of the sheriff." The man of colour, it seems, was so confident of victory, that, previous to the fight, he betted five to two he drew first blood

—this bet he won; and also two to one he floored Fuller first—the latter was not decided. Fuller expressed himself ready to settle the matter the next day, but Molineux insisted the fight should not take place till the following Tuesday.

The above arrangement was agreed to, and, on Tuesday, May 31, they again met at Auchineux, twelve miles from Glasgow. Fuller was attended by Ward and Cooper, Molineux by an Irish serjeant, of the name of Hallward, assisted by a private. The umpires were Capt Cadogan and Mr. George Stirling, and in case of any dispute, Mr. Graham, of Guntmaux, as the referee. This battle is without parallel. There is nothing like it in the annals of pugilism. It is thus described by the veteran Joe Ward, from whom the account given in BOXIANA was gathered, and which we here reprint:—

#### THE FIGHT.

Round 1. Fuller displayed some good positions, and convinced the spectators that he was a scientific boxer. His guard was firm and imposing, and he seemed confident of success. They sparred a considerable time, with good skill, before any punishment was exhibited; at length Fuller, by a tremendous hit, drew the cork of his antagonist. Molineux, upon the claret making its appearance, became rather impetuous, and attacked Fuller fiercely; but the latter stopped with much adroitness, and gave some heavy nobbling returns. A desperate rally now took place, during which severe milling was dealt out on both sides; the men broke away, and again resorted to sparring. Fuller's nose was much peppered, and the crimson flowed abundantly. In short this unprecedented round was filled with rallies—retreats—retreating—following each other alternately round the ring—stopping and hitting with various success—and both exhausted by turns, till at length Molineux was levelled by a tremendous blow, and the round finished after a lapse of twenty-eight minutes.

2. To describe anything like the various changes which occurred during this set-to, would fill the space of an ordinary report of a whole fight. Suffice it to observe, that almost every "dodge" of the milling art was resorted to, from beginning to end. The skill, practice, and experience of both the combatants were made use of to the best advantage. Fuller proved himself a boxer of more than ordinary science and game. Molineux was convinced he had got a troublesome customer to deal with, who required serving out in a masterly style before he could be satisfied. In fact, the strength of the Man of Colour seemed materially deteriorated as compared with his former exhibitions, when he used to hit his men away from him, and levelled his opponents with the most perfect sang froid. The severe blows of Fuller, who stuck close to Molineux, made him wince again! The Black appeared much exhausted from the great portion required to give, and heartily tired of what he had to take. The claret was liberally tapped on both sides, and as regarded Fuller, stancher game was never displayed by any pugilist whatever. Upon the whole, it was a truly singular fight, and the people of Scotland witnessed the most unique specimen of English prize-fighting. In sixty-eight minutes two rounds only had taken place.

The contest terminated in rather a singular manner. Molineux asserted that "Joe Ward had behaved foul, in pulling Fuller down, when he was much distressed and had been beaten all over the ring in a rally; and that this prevented him from putting in a decisive blow." The umpires decided it was so; and the purse was accordingly awarded to Molineux. The latter did not appear any thing like the once tremendous competitor of Cribb; on the contrary, instead of going boldly up to his man, he was always shy, and tried to win by tiring out his man. Molineux fought at the head, Fuller at the body. Notwithstanding the supposed falling off of the man of colour, it was considered great temerity on the part of Fuller to enter the lists with Molineux.

The conduct of Fuller in the above fight gave such general satisfaction, that a purse of 50 guineas, which had been subscribed for at match between Cooper and Carter, in consequence of that battle not taking place, was presented to Fuller.

Molineux attracted much attention in Scotland, and a match was at length made between him and George Cooper, a boxer of superior talent. On the 11th of March, 1815, these first-rate heroes of the fist met at Corset-hill, in Lanarkshire. In twenty minutes Molineux was defeated.

Intemperance was the ruin of Molineux; and, it would seem, that within a brief period his fame had become so tarnished, that every strong commoner entertained an idea that he could serve out the once formidable Mas of Colour, as the following anecdote will evince. During Molineux's provincial tour of 1813, he visited Derby, to give the natives an exhibition of his milling accomplishments. The competitor of Cribb was well attended, and several Johnny Raws had the temerity to have a taste with the Black; but these, possessing little more than strength and courage, soon found themselves inadequate to contend against the science of Molineux, and therefore wisely laid down the gloves. Not so a country pugilist of the name of Abraham Denton, possessing Herculean strength, and the stature of a giant, added to which his fame was well abroad in these parts for milling, in which none dared to oppose him. Abraham had rather "crept into favour with himself" and entertained an idea that, with the mufflers, he should be able to serve out the Moor in style, and increase his renown as a miller. Great things were expected from the countryman; and considerable interest was excited among the spectators upon their setting-to. But, unfortunately for Abraham, he had calculated somewhat too hastily upon his great size and strength, and two rallies with the Black were quite enough to convince him of his error. Molineux punished the chaw-bacon most severely for his self-conceit, and, with one of his favourite left-handed lunges, gave

him such a remembrancer under his left eye, that the claret flew in all directions, and the big 'un found his way to the ground, saluting it roughly with his seat of honour. The conceit of Abraham now evaporated, and he hastily retired amidst the laughter of the audience.

From Scotland, Molineux went on a sparring tour into Ireland; and at the latter end of the year 1817, he was travelling over the northern parts of that country, teaching the warm-hearted natives the use of their fists. But the sun of his prosperity was set; and according to an obituary sketch (given in the *SPORTING MAGAZINE*, vol. 2, p. 230, 1818) he was dependent for bare existence on the humanity of two coloured compatriots, serving in the 77th regiment, then quartered at Galway; he expired in the band-room of that regiment, on the 4th of August, 1818, a wasted skeleton, the mere shadow of his former self. For the last four years he strolled about the country. Intemperance, and its sure follower disease, brought down the once formidable gladiator to a mere anatomy, and he latterly declined to fight the oft-defeated, and gone-by Dan Dogherty. Molineux was illiterate, and ostentatious, but good-tempered, liberal, and generous to a fault. Fond of gay-life, fine clothes, and amorous to excess, he deluded himself with the idea that his strength of constitution was proof against excesses. Alas! poor Molineux found out the vanity of his conceited boast, and repented, but too late, his folly. Peace be to his manes! he was a brave, but reckless and inconsiderate man, on whose integrity and straightforwardness none who knew him ever cast a slur; nevertheless he was the worst of fools, inasmuch as he sacrificed fame, fortune, and life, excusing himself by the absurd plea, that "he was a fool to no one but himself."

END OF PERIOD IV.

### BRITISH BIRDS.—NO. XXVII.

THE MALLARD.

**T**HE Mallard, or Common Wild Drake, weighs from thirty-six to forty ounces, and measures twenty-three inches in length, and thirty-five in breadth. The bill is of a yellowish-green colour, not very flat, about an inch broad, and two and a half long, from the corners of the mouth, to the tip of the nail: the head and upper half of the neck are of a glossy deep changeable green, terminated in the middle of the neck by a white collar, with which it is nearly encircled: the lower part of the neck, breast, and shoulders are of a deep vinous chestnut; the covering scapular feathers are of a kind of silvery white, those underneath rufous; and both are prettily crossed with small waved threads of brown: wing coverts ash: quills brown, and between those intervenes the beauty-spot (common in the duck tribe), which crosses the closed wing in a transverse oblique direction; it is of a rich glossy purple, with violet or green reflections, and bordered by a double streak of black and white. The belly is of a pale gray, delicately pencilled, and crossed with numberless narrow waved dusky lines, which, on the other sides and long feathers that reach over the thighs, are more strongly and distinctly marked: the upper and under tail coverts, lower part of the back and rump are black; the latter glossed with green: the four middle tail-feathers are also black, with purple reflections, and, like those of the domestic drake, are stiffly curled upwards, the rest are sharp-pointed, and fade off to the exterior sides, from a brown to a dull white: legs, toes, and webs red.

The plumage of the female is very different from that of the male, and partakes of none of his beauties except the spot on the wings. All the other parts are plain brown, marked with black. She makes her nest, lays from ten to sixteen greenish-white eggs, and rears her young gene-

rally in the most sequestered mosses or bogs, far from the haunts of man, and hidden from his sight among reeds and rushes.

We have known the wild duck to have bred on dry heaths, and three instances of their nests being found in trees: one in an old magpie's nest, situated in a Scotch fir growing on a heath; the two others on the crown of willow pollards near the margin of a stream. For richness and harmony of colour, the mallard can vie with any of the British birds. The cock pheasant, though splendid, looks artificial and tawdry when compared with it. The flavour is delicious to the epicure; and to the sportsman the sight of one springing from a reed bed is delightful. It requires both caution and skill to approach their haunts to get a successful shot, as the mallard is one of the most wary of birds, and delights in lone and sequestered places; consequently awake to every sound of intrusion on its retirement. In the autumn these birds pass from north to south, and in spring again seek their northern abode. Franklin, in his "Narrative of an Overland Journey from Hudson's Bay, to discover a north-west passage," says, "In the spring vast flocks of wild ducks, &c., made their appearance in this northern latitude for the purpose of incubation." Many breed with us, and about March may be found in pairs,

"Calm on the bosom of some little lake,  
Too closely screened for ruffian winds to shake."

To the unsophisticated sportsman the pursuit of wild-fowl yields infinite delight; to the clamorous battue abortive; to the skilful decoymen it is profitable; and to a man seated in a punt, firing his swivel guns, it is drudgery—profit though there may be.

The Game Act has a clause to prevent wild-fowl from being killed from the last day of March to the first of October: this will prevent those squabs called flappers being destroyed in a very unsporting-like sort of sport. The penalty will save the birds until they arrive at maturity.

The following curious account of MALLARD Day at Oxford, and its origin, will interest many of the readers of the *SPORTSMAN'S MAGAZINE*. At All-Souls College, Oxford, there is annually on the evening of this day a great merry-making, occasioned by a circumstance related in "Oxonienis Academia, or the Antiquities and Curiosities of the University of Oxford, by the Rev. John Pointer," who says,—

"Another custom is that of celebrating their Mallard-night every year on the 14th of January, in remembrance of a huge mallard or drake, found (as tradition goes) imprisoned in a gutter or drain under ground, and grown to a vast bigness, at the digging for the foundation of the College.

"Now to account for the longevity of this mallard, Mr. Willughby, in his Ornithology, tells us (p. 14 speaking of the age of birds) that he was assured by a friend of his, a person of very good credit, that his father kept a goose known to be eighty years of age, and as yet sound and lusty, and like enough to have lived many years longer, had he not been forced to kill her for her mischievousness, worrying and destroying the young geese and goslings.

"And my lord Bacon, in his Natural History, p. 286, says the goose may pass among the long livers, though his food be commonly grass and such kind of nourishment, especially the wild-geese: whereupon this proverb grew among the Germans: *Magis senex quam Anser-nivalis*—older than a wild-geese.

"And, if a goose be such a long-lived bird, why not a duck or drake, since I reckon they may be both ranked in the same class, though of a different species as to their size, as a rat and a mouse.

"And, if so, this may help to give credit to our All-souls mallard. However, this is certain, this mallard is the accidental occasion of a great gaudy once a year, and great mirth, though the commemoration of their founder is the chief occasion. For on this occasion is always sung a merry old song."

This notice caused "A complete vindication of the mallard of All-souls College, against the injurious suggestions of the Rev. Mr. Pointer:" a publication by a pleasant writer, who, with mock gravity, contends that the illustrious mallard had, through a "forged hypothesis," been degraded into a goose. To set this important affair in a true light, he proceeds to say—

"I shall beg leave to transcribe a passage from Thomas Walsingham, a monk of St. Alban's, and regius professor of history in that monastery about the year 1440. This writer is well known among the historians for his *Historia Brevis*, written in Latin, and published both by Camden and archbishop Parker: but the tract I am quoting is in English, and entitled, "Of wonderful and surprising Eventys," and, as far as I can find, has never yet been printed. The eighth chapter of his fifth book begins thus:—

"Ryghte wele worthie of note is thilke famous tale of the All-Soulen Mallarde, the whiche, because it bin acted in our daies, and of a surety vouched unto me, I will in fewe wordys relate.

"Whenas Henrye Chichele, the late renowned archbishops of Cantorberye, had minded to founden a collidge in Oxenforde, for the heale of his soule and the soules of all those who perished in the warres of Fraunce, fighteing valientlye under our most gracious Henrye the fiftie moche was he distraughten concerning the place he myghte choose for thilke purpose. Him thinkyth some whylest how he myghte place it withouten the eastern porte of the cite, bothe for the pleassuntesse

of the meadowes and the clere stremys thereby runninge. Agen him thinkyth odir whylest howe he mote buiden it on the northe side for the helpeful ayre there coming from the felde. Nowe while he doubteth thereon he dremt, and behold there appereth unto him one of righte godeleye personage, sayinge and advyising as howe he myghte placen his collidge in the highe strete of the cite, nere unto the chirche of our blessed ladie the Virgine, and in witnesse that it was sowthe, and no vain and deceitful phantasie, wolled him to laye the first stane of the foundation at the corner which turneth towards the Cattys-strete, where in delvinge he myghte of a suretye finde a schwoppinge mallarde imprisoned in the sinke or sewere, welle yfattered and almost ybosten. Sure token of the thriveance of his future college.

"Moche doubteth he when he awoke on the nature of this vision, whether he mote give hede thereto or not. Then advyisyth he there with monie docters and leamyd clerkys, who all seyde howe he oughte to maken trial upon it. Then comyth he to Oxenforde, and on a daye fixed, after masse seyde, proceedeth he in solemne wyse, with spades and pickaxes for the nonce provided, to the place afore spoken of. But long they had not digged ere they herde, as it myghte seme, within the wam of the erthe, horrid strugglings and flutteringes, and anon violent quakings of the distressyd mallarde. Then Chichele lyfeth up his hondes and seyth Benedicite, &c. &c. Nowe when they broughte him forth, behold the size of his bodie was as that of a bustarde or an ostridge. And moche wonder was therest; for the lycke had not been seene in this londe, ne in onie odir."

Upon this "historical proof" the vindicator rests the verity of the venerable mallard, and goes on to prove that "Mr. Pointer, by taking the longevity of the mallard for granted, hath endeavoured to establish thereon the hypothesis of the goose in opposition to all truth and testimony, both historical and prophetic." The vindicator further affirms that he is greatly surprised to find "an orthodox clergyman, like Mr. Pointer, abetting errors, and proposing (though obscurely) dangerous innovations." For, he enquires, "would any one but this author have represented so august a ceremony, as the celebration of the mallard, by those vulgar circumstances of eating and drinking, and singing a merry old song?"

However, to conclude all that can be reasonably said of this commemoration and its origin, and, because this "merry old song" hath not been given by either the alleged asperser or the asperser of the bird of All-souls, the ballad is extracted and printed below, from a collection well known to Oxonians. It must not however be forgotten that the reverend author of "A companion to the Guide, and a Guide to the Companion," which purports to be "A complete supplement to all the accounts of Oxford hitherto published," says, in his preface, that the Reverend Mr. Pointer, rector of Slapton in Northamptonshire, was but little acquainted with our academical annals, is evident, from his supposing the mallard of All-souls college to be a goose."

#### THE MERRY OLD SONG OF ALL-SOUL'S MALLARD.

Griffin, bustard, turkey, capon,  
Let other hungry mortals gape on;  
And on the bones their stomach fall hard,  
But let All-souls' men have their mallard,  
Oh! by the blood of King Edward,  
Oh! by the blood of King Edward,  
It was a swapping, swapping mallard.

The Romans once admired a gander,  
More than they did their chief commander;  
Because he sav'd, if some don't fool us,  
The place that's called th' head of Telus,  
Oh! by the blood, &c.

The poets feign Jove turned a swan,  
But let them prove it if they can,  
As for our proof 'tis not at all hard,  
For it was a swapping, swapping mallard,  
Oh! by the blood, &c.

Therefore let us sing and dance a galliard  
To the remembrance of the mallard:  
And as the mallard dives in pool,  
Let us dabble, dive, and duck in bowl.  
Oh! by the blood of King Edward,  
Oh! by the blood of King Edward,  
It was a swapping, swapping mallard.

**MORE THAN A MONTH WITHOUT FOOD.**—The following anecdote is one of the many examples we have of animals sustaining life for a great length of time without food; and seems to be decisive as to the possibility of the fact, which many have doubted, and who have sought to account for their living long in such situations by finding other food where they were confined. "A cock, the property of Mr. Edward Lemin, of Mr. Edward Lemin, of Truro, in October 1793, fell into a shaft four fathoms deep, where it remained for one month before it was discovered: it was taken out alive and unhurt, though in a very emaciated state, and by proper treatment perfectly recovered. It was impossible that it could have received any food or water whilst it was in the shaft."—*Captain Brown's Anecdotes of Horses.*

## CORRESPONDENCE.

### OBSERVATIONS ON THE SEX OF BIRDS, PARTICULARLY PARTRIDGES AND PHEASANTS.

To the Editor of THE SPORTSMAN'S MAGAZINE.

Shooting has been a species of sport in which I have always taken great delight. In one of my excursions a few seasons back, accompanied by a friend, I brought down a pheasant, which we concluded to be an hermaphrodite, as its feathers so much resembled those of a cock bird, only fainter in their lustre. Since however I had the pleasure of receiving full satisfaction as to this circumstance; for being lately on a visit to a gentleman who keeps pheasants I there saw several hens in the state above described, and others beginning to change, which I was told was a common thing, and that they never bred afterwards. And in confirmation of this assertion during our conversation upon the subject, the gamekeeper of a neighbouring baronet came to beg some hens, for all his were changed, and consequently would breed no more.

The change begins at the breast where those beautiful feathers are seen in the cock bird: and though some of the hens, which were but young, had only a few feathers changed in that part, yet I was assured, that all those hens would cease laying in a year or two and be totally changed. But though this be not uncommon with tame birds, yet I apprehend it is otherwise in their wild state because I never saw but the one above mentioned; my companion was also of the same opinion, who being an excellent marksman, had killed great numbers of pheasants but never before seen one of this description.

Whether the same change takes place in the nature of partridges or not, I am ignorant. Yet some years ago I was with a friend who had in his garden a covey of partridges, that had been bred there, and were used to come into a basket every evening. I observed that several of them had two or three colored feathers on their breasts which I took notice of to him as something singular. But I do not recollect to have seen the like in wild birds. The difference between the cock and hen partridge except the horse shoe on the breast of the former, is so small that a change in the latter similar to that in the pheasant may not readily be observed; but sportsmen in general very well know that it is common to find two three or more old cock-birds together without a hen at the beginning of the season. What may be the reason of this I know not, whether any of them may be hens changed like the pheasants and so past breeding or whether they be really cocks. For as in the human species Providence for very wise reasons sends into the world more males than females: so in several species of the fowl kind we generally find the number of cocks exceeding that of hens. And this if I may be allowed to conjecture is a very wise provision in pheasants particularly because the cock is a more varying disposition than the hen, and consequently more able to be found; and he is moreover a larger and more tempting mark. And the cock partridge by his chattering when he rises is more likely to attract the notice of the fowler than the hen who is silent.

Yours very truly,

H. A. D'ALTON.

Lyndhurst, Hants, Dec. 15th, 1845.

### A FEW WRINKLES ON "MODERATION."

To the Editor of THE SPORTSMAN'S MAGAZINE.

London, January, 8th. 1846.

SIR.—At this season of the year, which is no month at all, but a sort of prosaical preface to the real beginning of the New Year, of course but little can be reasonably expected in the way of sport. The only amusement left to the sportsman is the repair and putting in order of his implements for the season, and the perusal of his library, this, *certainly* I shall take to be well stocked with the best authors of the sporting order, not forgetting the "SPORTSMAN'S MAGAZINE," which, if done in the proper mode and systematically, a considerable fund of amusement tempered with instruction can be derived from them, which is always essentially useful in the career of the sportsman. This is the grand secret of making the life happy, and at the same time allows to the physical powers an opportunity of relaxation in such a degree as will appear surprising to any one who has not hitherto accustomed himself to it. Besides, it is a duty that is imperative; the sportsman is no more than human, and it is not likely that he can devote his whole time and energies (sometimes pretty considerably exerted) to his favourite pursuit, without impairing those functions which are so necessary to the well being of his physical system. Many of my readers may be inclined to dispute this doctrine, but I can fearlessly champion it, conscious of the advantages to be derived from my suggestions. Sporting, when it becomes as fixed to the habit of the sportsman as opium to the opium eater, is as bad in its effects, and on this point I believe that I am supported by the most distinguished medical men of this and other ages; sport then ceases to be sport, it becomes an "unenjoyable practice," and divided from that enthusiastic ardour of the "moderate" sportsman, who avoiding the "too much" of the insatiable pursuer of enjoyment, blends the *stille* with the *dulce*, and finds in moderation, and a short relaxation from his favourite pleasure, a renewed zest for its resumption.

"The bow that's always bent doth lose its spring."

F. B. T.

## WILD BOAR HUNT IN LUXEMBURG.

On the 17th ult some sixty sportsmen and a hundred beaters met at the cottage of the keeper at Berisemil. The order of the governor of the province, who had authorised this *batue*, had placed it under the guidance of the *garde general* of the place.

In the evening ten woodsmen of the neighbourhood started to ascertain the whereabouts of the wild boars, and reported that recent traces of these animals were discoverable, and that they would be found in an immense marsh covered with thick tufts of birch, alder, and willow trees, almost impenetrable to the sportsmen.

Before daybreak the expedition, guided by this information, commenced their march, observing the most profound silence. At four o'clock in the morning the beaters, led by an experienced keeper, were placed *en echelon* round three-fourths of the circumference of a circle enclosing the game. At the same time the *garde general* ranged the hunters on the opposite side, so that the wild boars were surrounded on all sides. At a given signal the hundred beaters rushed in shouting and driving the game before them towards the spot whereupon the hunters were placed in wait. Reused by the clamorous shouts of the beaters the inhabitants of the old forest rushed pell-mell towards the only spot from whence no noise was heard. A wolf was the first that showed himself at the cordon, fencible by the hunters, and was immediately knocked over by a shot from an English tourist, who had joined the hunt. Two roebucks followed the wolf, but passed scatheless, it being forbidden to fire at them, an innumerable crowd of foxes, hares, &c. &c. then passed from out the forest, but no wild boar was as yet met with.

Several of the hunters now began to despair. Some complained of having been brought for no purpose from their homes, others dreaded the jokes and quizzing which they would meet with on their return to their village, whilst some did not hesitate to accuse the *garde general* of incapacity, or doubted altogether the existence of the wild boars which they had come out to hunt. The old woodman, however, smiled sullenly, and listened up the wind, with their necks stretched out, for the herd of wild boars. At last they came on. An extraordinary noise, as if a squadron of cavalry were galloping through a copse was heard, and every moment seemed to approach nearer. An undulation was heard among the bushes, produced by the wild boars, who came on in a long black file. At their head was a monstrous animal, who was recognised as having done much mischief in the neighbourhood. The report of a gun was heard; the whole band of the animals dispersed, and the leader rolled over upon the ground, but, quick as thought, he recovered himself, stopped an instant to view his rash enemy, and then rushed upon him. The hunter sprang a little on one side, and the boar running at full speed, missed his aim, and received in passing a second shot, which broke one of his legs.

Notwithstanding this, he cleared the circle and fled towards the surrounding woods, and was on the point of escaping, when two men, named Titeux and Jacobs, accompanied by dogs trained to the sport, set off after him. For some time the dogs could not come up with him, at last they headed him, and one of them, at a bound, seized him by the ear, which compelled the boar to run with his head all on one side. By a sudden dart the boar shook off the dog, and instantly ripped him up with one blow of his tusks; other dogs then took the place of him who was thus disabled, and at last brought their enemy to bay. Titeux then got up, armed with his knife, and at a bound sprang astride upon the boar's back, and endeavoured to cut his throat. Jacobs, who had watched his comrade's motions, followed instantly, and still bolder than his friend, seized the animal by one of the hind paws, turned him up and laid him upon his back; Titeux, who had fallen under the boar, withdrew himself quickly from his dangerous position, and the spectators, who had watched him with terror, now saw him seize the boar by the ears, hold his head against the ground under his knee, and then cut the throat of the monster as quietly as if he was operating upon a tamed pig.

At another spot a sow, weighing 150 kilogrammes, followed by her pigs, and furious from the wounds she had received, rushed upon an imprudent hunter, who had suffered himself to be surprised in a narrow passage between two rocks. Having no time for flight, he waited till the animal was quite close, but his gun having missed fire, he had only time to throw himself down flat on his stomach, and the sow passed over him. He jumped up, and having reprimed his gun, began shouting, to provoke his enemy to renew the fight. The sow, with her head and breast covered with bloody foam, darting fire from her eyes, returned, and charged him, and having approached within ten paces, she received the fire of the huntsman, and fell.

These terrible scenes were not altogether unaccompanied by others sufficiently ludicrous. At one point a regular Brussels dandy, who had come expressly to assist at this hunt, was pursued closely by an animal, and throwing away his gun, he sprang at one bound, with extraordinary agility, nearly ten feet high into a beech tree, where he sat perched up, whilst some of the beaters, armed with sticks, having followed some of the young swine into a bog, lost their footing, at the very moment they had reached them, and rolled headlong pell-mell together into the mud, from whence they were only rescued by the spectators forming a chain and dragging both out.

The resus of the hunt were a wolf, two enormous boars, and three pigs killed, and five young swine taken alive.

## A PEEP AT A LONDON "LEG-OF-BEEF SHOP."

It is a melancholy sight to witness the half-starved, anatomical looking small youths, dressed in every variety of poverty, wardrobe, that linger for hours near a certain little bay-window in St. Giles's; where the nobility, gentry, and public are informed, that by laying down the sum of threepence, they will be allowed peaceably to depart with an imperial pint of leg-of-beef soup in their own jug. It is a moving sight. Seldom, very seldom, is it the good fortune of these watchful youths to revel in such luxuries as leg-of-beef soup, or its rival, a-la-mode; they are beings only destined to view such things afar off, and make vain speculations upon their ravishing flavour; to contemplate them as amalgams expressly prepared for the affluent—those happy ones who could spend threepence and not feel it. Oh! what facility to be master of such a shop! to eat as much as he likes and nothing to pay! Now two happy beings are entering the edifice. One of them is a dustman, in spotted neckerchief, red wrist-cuffs, and a cap peculiar to a gentleman in that line of business; the other is his lady, glorying in the Euphonic name of "Doll." See with what a majestic air he strides in and takes his seat, as if he could buy up the whole establishment twice over if he chose. Hark with what a lordly voice he calls the waiting-boy, whose benevolent master, for sundry services rendered rewards him with ninepence per week, and the gratuitous licking of all the crockery soiled on the premises.

"Waiter!" again vociferates he of the neckerchief.

"Yes, sir!" is the reply.

"Didn't you hear me call waiter, afore?"

"Sorry, sir; but the gen'l'man as is just gone was a goin' to forget to pay, sir—that's all, sir."

"That's nuffin to do with me. Ven I calls 'waiter,' I wants yer. I can't afford a waste my precious breath to no purpose, as the members of parliament do; so just prick up them long ears of yours, and then I think you'll grow the wiser."

"Yes, sir."

"Well, then, bring this here ledly and me a free-ha'penny plate each, and two penny crusties."

With another professional "Yes, sir," the urchin vanishes from the presence. Once more the purveyor's ladle dives into the bright tin kettle. Again he tortures the hungry beholders outside the windows—as they look on with outstretched necks and spasmodic mouths—with glimpses of its treasures. They see the choice bits of gristle but for an instant, and no more; for whilst gazing at the sight in a paroxysm of longing and fever of desire, the plates are borne off to the dustman.

"Now, Mr. Impudence," says the lady, addressing the purveyor's protegee, at the same time with much dexterity and elegance, converting a fork she has discovered upon the seat into a toothpick. "Now, Mr. Impudence, I hope you've brought a little less paddywack in it than there was yesterday."

"Bravo, Doll!" ejaculates her lord approvingly, as leaning back with extended leg he draws from his pocket a coin of the realm. "Here, just walk your laziness across the way, and travel back ag'in with a pint of half-and-half. Now, vot do you stand rraging o' the money for? Do you think other people is as vicked as yourself?"

"Th' s'picious little warmint!" rejoins the lady, swallowing a spoonful of soup with alarming expedition, and fulfilling the purposes of a napkin with the back of her hand. "Did you see what a himperant grin the little beast give?"

In due time the boy and the solution of malt and hops present themselves, and after a hearty draught of the grateful beverage, the dustman evinces a disposition to become musical, and whistles an air or two with perhaps rather more of good will than of good taste. He suddenly looks round, and discovering his lady has finished the plate of soup and the last drain of beer also, summons the juvenile waiter from behind a little partition, just at the mortifying moment when his tongue is making clean the interiors and exteriors of two recently-used plates.

"Now, then, young imp, what's the damage?"

"Sixpence, please sir," said the waiter, vainly endeavouring to quiet his tongue, which keeps playing round the sides of his mouth; "two plates and three loaves, please, sir."

"We aint had free, you cheating little wagaband!" screamed the lady; "we've only had two—you know that!"

"Oh, beg pardon, ma'am," replies the boy; "it was t'other box where he gen'l'man was as had three. Fippence, then, please, sir—two plates and two new 'uns—fippence."

"You're a nice sample o' thievery for your age," says the dustman contemplating the boy with one eye, and then counting out four penny-pieces and four farthings with curious deliberation. "You're a nice article to cast a gen'l'man's bill. Do you happen to know a cove in London by the name o' Ketch—Jack Ketch?"

"Yes, sir."

"Well, then, the next time as you go his way, have the goodness to save your card, and say you was strongly recommended to him by me."

## A PRESENT WITH NO. 37.

Every purchaser of No. 37 of the SPORTSMAN'S MAGAZINE will receive GRATIS No. I. of

## LIFE IN LONDON,

A New and Popular Romance,

By J. H. THORNELEY, Esq.

Every vender will receive an equal number of the Present with the papers he may purchase.

# The Sportsman's Magazine.

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 532.)

I will now resume my reminiscences of events subsequent to the Doncaster meeting.

At BEDFORD, Sept. 21, Symmetry won the Preparation Stakes, beating Master Stepney and Judex. A tolerable two years old race then came off between the following:—filly by Cæsar out of Ramadan's dam, first; colt by Redshank, dam by Lancastrian, second; and Tit-bit a clove third; Lord Verulam's Corumb, filly, Bæstgirth, and Moose Deer to ten off: it was a half-mile race, 10 sov. each. The Queen's Plate, three miles, was won by Misdeal, over a good field, including Keppel, Hawk-bury, Plantaganet, and Mystery. Young Eclipse, puffed for the Derby by those who knew better, was in and yet out of the race. Fama beat Master Stepney, second; Hampton, third; for the Stratton Park Stakes. A colt by Bentley ran two good races here, priced at 50/., and was claimed; he was rode by Marson, and beat a filly by Jerry out of Pastile, Judex, Symmetry, Devil-among-the-Tailors, Hampton, and Isleworth. The Queen of the Gipsies won the Bedfordshire and Consolation Stakes, beating some middling ones.

At CANTERBURY, Sept. 24, Alkali beat Dalesman, Bonnet Rouge, and Tippoo, for the City Members' Plate. In a small Sweepstakes Teresa beat Jew Boy and others; and she also won another race. Alkali won the City Plate; and Red Deer the Queen's. There was much confusion, and consequently dispute here, owing to the want of a professional judge.

At OSWESTRY, Sept. 28, Sweetmeat walked over for 100/. Dr. Hubbard won the Cup, beating Tippoo and two three years old; he also won the R. S. C. Members' Stakes. Sinbad, by Bran, won the Shropshire Stakes, 20 sov. each, 50 added, beating Alvanley and Tippoo. Mr. Standish won two races with Susan.

At RICHMOND, Sept. 23, the Dundas Stakes brought a tolerable lot to the post. Hovingham, now Duke of Richmond, carrying 5-t, beat Therapist and Mr. Mansfield, both same age and weight, and the Mole Colt, Thalia, and Lucy three years old 7st 10lb each. It is a one mile and three-quarter race. For the Grand Stand Stakes, 25 sov. each Two-year-old Eulogy, by Euclid, beat Heedsman (D) and Lutestrating (D). The Baby Stakes, rather a racing matter, of 25 sov. each with twenty added, were won by Cranebrook beating Burlesque, Ada, Banana, Malt (D) Fair Star, and Fair Helen. Malt although badly started, got a good fourth position, though not placed. Inheritress won the Richmond Handicap beating Advice, Coheirress, Queen of Tyne, and another; a brown gelding by St. Martin won the Town Plate, beating Lycurgus, Miss Burns, and a Touchstone Colt. Godfrey, on the next day, won the Racing Club Stakes, beating a good field. For the Wright Stakes a tolerable lot of two years old contested, Ada being first, and colt by Phoenix, dam by Tomboy second; the others, including the Hydra Colt, and some of the same class, were third, fourth, fifth, and last. Inheritress beat Extempore for the Queen's Plate easily. I fancy that it was Fancy Boy's running in the two years old Sweepstakes against Cranebrook and Benevolence which got him his present position in the betting—he won cleverly; that is, by making up for an apparently lost race, he came within a few strides from home, and won by a head! Cartwright rode him and Holmes the second; Benevolence being beaten for second by a neck only. I will now with pleasure relate a good race and a victory for Trueboy "not unknown to fame," as it is decidedly the most agreeable reminiscence I can recall of him for the year; he won the Gold Cup, over rather short of 2 miles, beating Pagan, Lucy, Coheirress, a Colt by Confederate and Winesour.

At WALSALL, Sept. 24, Nix-my-Dolly, and the Filly by Glaucus out of March First, won two races each. T'Auld Squire, Roderick, Ivanhoe and the Rhine having no luck. At Monmouth, Sept. 24, Tariff was beaten again in two races. Mr. Ball's Rein Deer won the best thing.

At Hastings, Sept. 19, a Mr. Way's horses took it in their heads to be out of the way and both bolted. A losing plate, by way of paradox

and a finish, was won by Miriam. Auld-Lang-Syne was a winner of the St. Leonard's Tradesmen's Plate, beating Alkali, Spectator, and Fee Simple.

At the GORTON RACES, Sept. 25, for a Sweepstakes of 10 sov. each two years old c. and f., a filly of Tomboy, out of Lapwing beat Lord Harry and Chartist. Roderick won the Manchester Cup, beating Jack Sheppard and Lord Saltoun. The Maid of Auckland, by Tomboy, won two races. Lady Flora won the Claret Stakes, and for the Sloan Purse Bretwalda (6st 4lb) beat Princess Royal (6st 12lb) and Xanthus (8st.)

At PORTSMOUTH, Sept. 24, there was a capital race for the Town Plate, which was won by Adrian, beating Miriam, Waterloo, and Young England. Waterloo lost another race here, being beaten by Sir Edward.

At LINCOLN, Sept. 25, Glossy won the Queen's Plate and the Subscription Purse. Rosina, by Romulus, two races, and a filly by Sheet Anchor, out of Valencia, the Brownlow Stakes.

In conning over these reminiscences I must beg of your readers to bear in mind that it is just likely I may omit stating, in relating a two years old race, which of the starters is in the coming Derby and Oaks. I must beg of them therefore, having the names of the horses before them and their performances, to refer at once to your Almanac, if handy, and mark by a tick opposite, which will serve as a guide on the future day. Owing to the press of business, I suppose, at the time, I have frequently found the Sunday Times and the Era, as well as Bell's Life, incorrect in these details.

## TO CORRESPONDENTS.

M. B.—Mr. Payne's Polka, (in the Oaks and Leger), is not in the Derby. She lost all the 3 of her races last year. She is by Emilian, dam Tarantula. For your other queries see our "ALMANAC," which is still on sale (with No. 28) for THREEPENCE the two.

H. C. Weather, Wilt.—If you are "a subscriber," surely it would be much easier to refer to our "Almanac" (where you will find your question answered) than write to us. If you are not, just refer to the preceding answer to another correspondent.

SOMERSETSHIRE.—For the tenth time we reply, the "HISTORY OF BOXING" in this column will be carried down to the present time. The early chapters of the History will be reprinted in a quarto form (along with the Titlepage and INDEX to the first volume of the SPORTSMAN'S MAGAZINE, and given with the 52nd number. Observe, No. 13 is reprinting, and the 52nd number to complete sets must order all other numbers they may want, that we may know how many will be required of that number; a set of plain paper and complete sets can be supplied.

STRIKEHARD.—Johnny Brown was beaten as before. His fight with Bungaree was subsequent to his marriage; it was for £200 a side, and lasted 42, occupying 57 minutes. You have therefore won in laying it was under the hour, but lost on the former point. Harry has fought three times in the F. R. once with Mirson, the Bull-dog, and twice with Joe Rowe, although the first fight ended unsatisfactorily.

ESTER-ROSE.—The time for Morley and Gil's desired meeting is not yet fixed. It will doubtless take place soon after Paddy's "time" is up.

A BATH CHAP.—Gayer kept the Duke's Head, near Bow-street, but did not die there. He died at his house in Grosvenor-street, Bow-street, in 1831.

A FANCIES, CORNHILL.—If you can supply a will complete the volume, and an Index and title will be given. The back Number is all to be had (excepting 13, reprinting). Your recommendation would be yet more acceptable if subscribers took back numbers—as in their sale alone, unfortunately, they lose our profit, and it is only by ascertaining the demand, that we can recover a supply by reprinting. There is no method by which the egg that will produce a profitable and profitable market, would be most likely attended with success, so far as the London market is concerned.

W. S., Conington.—All Nos. after 16 are procurable of the Stamped Edition. We did not take out the licence to stamp until the 14th number of the MAGAZINE, but can forward the UNSTAMPED Nos., provided you give us the address of any bookseller or news-vendor, who will take charge of them on their arrival. We can then direct them through that Bookseller's Town AGENT, who will forward them for TWO-PENCE according to the practice of the trade, and thus save you expensive carriage. Or any News-vendor will take your order for them, upon payment, and you will receive them in his regular London Parcel.

RECTOR, Norwich.—Thanks for the book. It shall be dipped into, and we doubt not to find therein matter well worthy of extract. The chapter on Fly-fishing for Dace, will be acceptable, so soon as the funny and insect world awake from their hibernating torpor.

CHRONOS.—It was on the 21st October, 1805, and the funeral took place in the January following. The hero of Trafalgar, lies buried in St. Paul's Cathedral—not Westminster Abbey.

C. B. R.—"Newmarket," in tossing, means but one show of the coin. The question of who "calls" is a matter of mutual arrangement; if you can't settle who is to "call" you can toss, that's all.

CHAS. RUTLEY, Bristol.—Supposing a person is playing a game of Billiards and in the course of play says (without addressing any body in particular) I will bet a crown I win the game; and a party in the room says "done," can that party insist upon its being a bet. If the player refuses to: gree to it? Secondly.—Is the 21st Rule of Burroughes and Watts on Billiards correct, viz. Should the striker in making a cannon or hazard knock his own or either of the balls off the table he cannot score the points made by such stroke, and the opponent plays, but the balls are not broken? To the first.—It is usual in some way for the challenger, or he who offers a bet, to signify that he adheres to his offer. Wagers are so often proposed by way of vaunt that it is absurd to hold a party strictly; and in all cases there can be no contract unless both parties finally assent. To alter the practice would be opening a door to the extension of the "heads I win, tails I don't lose" principle. The 21st rule of Burroughes and Watts, which you will find is the 13th of Hoyle, is correct.

## OUR WEEKLY CALENDAR.

SENDAY, JAN. 18th.—SECOND SUNDAY AFTER EPIPHANY.—Old Twelfth Day. MONDAY, 19th.—Jenkinson (the London Stag) and Handley, of Nottingham, run 500 yards for 20/. a side.

TUESDAY, 20th.—Aberystwith Steeplechases (and 21st). WEDNESDAY, 21st.—Nelson's statue, in Trafalgar Square, inaugurated, 1844.—Louis the Sixteenth guillotined, 1793.

THURSDAY, 22nd.—Lord Byron died, 1828: Thorwaldsen cuts him (in marble), and the Dean of Westminster won't have him in stone.

FRIDAY, 23rd.—Bedford Steeplechase.—THE ORIGIN OF RAILWAYS.—The first idea of Railways is of very ancient date, for we hear of the Great Norman line immediately after the Conquest.

SATURDAY, 24th.—Charles James Fox born, 1759.—NATURAL PHENOMENON.—A Rook caught of a pure white: it is supposed that the bird had emigrated from St. Giles's, and had turned pale with fright at the destruction of "the Rookery" in that ancient quarter.

## TIDE TABLE FOR THE WEEK.

## FOX-HUNTING.—SCENE III.—HE BREAKS AWAY.

**I**N literature as in love and human life, all will not always run smooth. By a process of condensation or abridgment, our artist in his last picture, for which we gave as a subject "Going to Cover," took time by the forelock, and, like a hasty huntsman, has thrown his hounds "in." In consequence thereof we have of necessity omitted the subject of THE COVER-SIDE, and having got the tuneful pack busily engaged in the gorse, have made No. III. represent "sly Charley" breaking therefrom.— See how Dauntless, Boniface, and Dexterous feather as they approach the spot! And now, dashing in a with a whimper and a long drawn howl, the huntsman, taking off his cap, and waving in the pack, cheers them to the echo. The hunter pricks his ears; mad with delight he can scarcely be brought to stand with his head towards the cover as his master stands erect in his stirrups, with one hand on the cantrel of his saddle and the other holding his whip and reins, while his eagle-eye roves over every part of the dell. "Have at him there, Beauty!" cries he to old Bonny-bell—a favourite milk-white bitch that can scarcely be persuaded to quit his horse's heels,—as she stands whining, lifting a foot and looking him earnestly in the face;—"Have at him there, old lass!" echoes he, looking down upon her, and waving his right hand, to induce her to join cry. The old bitch dashes in, and the chorus increases. The gorse is close, or the hounds must have chopped the fox, for he has made two efforts to break up hill so as to fly for the woodland country, and has twice been driven from his point by the huntsman's voice and the crack of his wip, right upon his very foil. A momentary silence ensues as they over-run the scent. "Look out, Peter!" cries the huntsman to his whipper-in, stationed on the opposite hill, when the fox dashes over a piece of stone wall between two large ash trees in the high hedge at the foot of the cover, and with a whisk of his brush, sets his head straight down the vale, crossing over a large grazing ground of at least a hundred acres. "Silence!" cries the huntsman holding up his hand to the foot people, congregated on the hill, as he turns his horse short and gallops to the point at which the fox broke away, where with one cheer of his bugle, he presently has the old hounds at his heels; hat in hand he waves them over the wall. Jolly-boy feathers for a second on the grass, then with a long-protracted howl, as if to draw his brethren to the spot, away he goes with his head in the air, followed by Dexterous, Countryman, Bonny-bell, and True-boy, and after them the body of the pack.

"Gone away! gone away! tally-ho! tally-ho! tally-ho!" "Get away, hounds! get away!" hollas Peter, cracking his whip as he trots down the steep hill; and putting his bay mare straight at the fence at the bottom, crash he goes through it, with a noise that resembles the out-bursting of a fire in a straw-yard. Then comes the rush: the grey throws the stone wall behind him, as a girl would her skipping-rope;

and James Fairlamb's cob comes floundering after, bringing down the coping stones with a rattle and clatter that would have been awful if hounds had not been running. The third man is the doctor on the dun, he makes it still lower; and after him come "all the field" hollaoing and swearing away—as obstructed gentlemen in a hurry generally do. The foot-people seeing how hopeless is the case, stand upon the hills, lost in mute delight, eyeing the merry hunt careering over the meadows and hedges in a straight line with the pack, followed by Peter on his bay, and Fairlamb on his cob, until the plum-coloured coat of the latter assumes the same hue as the scarlet of the hunt, and hounds, horses, and men, grow

"Small by degrees, and beautifully less."

And now, as Reynard has "broke cover," in our next we shall see him "Gone away!" let us turn for a few paragraphs to the practical portion of working the hounds in cover, from Beckford's "Thoughts."

While hounds are drawing for a fox, let your people place themselves in such a manner that he cannot go off unseen. I have known them lie in sheep's scrapes on the side of hills, and in small bushes where huntsmen never think of looking for them; yet, when they hear a hound, they generally shift their quarters and make for closer covers. Gentlemen should take this necessary part of fox-hunting on themselves, for the whipper-in has other business to attend to.

Huntsmen, whilst their hounds are drawing, or are at fault, frequently make so much noise themselves that they can hear nothing else: they should always have an ear to an halloo. I once saw an extraordinary instance of the want of it in my own huntsman, who was making so much noise with his hounds, which were then at fault, that a man hallooed a long time before he heard him; and when he did hear him, so little did he know whence the halloo came, that he rode a couple of miles the wrong way, and lost the fox.

Though a huntsman ought to be as silent as possible at going into a cover, he cannot be too noisy at coming out of it again; and if at any time he should turn back suddenly, let him give as much notice of it as he can to his hounds, or he will leave many of them behind him; and should he turn down the wind, he may see no more of them.

**BEATING HOLLOW.**—"What an extraordinary curve my horse has in the spine," said an English gentleman to an Irish groom; "can you account for it?"—"By the powers, sir, and to be sure I am able. I have heard, sir, that before the baste was your property, he was backed against an Irish horse, your honour, who bate him hollow; and I dare say it's the reason that his back never got straight again."

Why is a lawyer like a sawyer? Because, whichever way he goes' down must come the dust.

## COURSING AND THE GREYHOUND.

(Continued from page 535.)

## SECTION VI.

**E**S a copy of the laws which regulate Coursing at the present day, may be profitably contrasted with the "Laws of the Leash," as subscribed to by our forefathers, the following code promulgated by the Duke of Norfolk in the reign of Elizabeth, and approved by the chief gentry of the period, and for some two centuries subsequent, will doubtless be acceptable.

## Ancient Laws of Coursing.

As framed by the Duke of Norfolk, temp. Elizabeth.

1. That he that is chosen Fawtner, or that lets loose the greyhounds, shall receive the greyhounds matched to run together into his leash as soon as he comes into the field, and follow next to the harefinder, or to him who is to start the hare, until he come unto the form, and no horseman or footman is to go before, or on any side; but directly behind, for the space of about forty yards.
2. You ought not to course a hare with more than a brace of greyhounds.
3. The harefinder ought to give the hare three soboes before he puts her from her form or seat, to the end the dogs may gaze about and attend her starting.
4. They ought to have twelve score yards law before the dogs are loosed, unless there be danger of losing her.
5. That dog that gives the first turn, if after that there be neither cote, alip, or wrench, he wins the wager.
6. If one dog gives the first turn and the other bears the hare, he that bears the hare shall win the wager.
7. A go-by, or bearing the hare, is accounted equivalent to two turns.
8. If neither dog turns the hare, he that leads last to the covert wins.
9. If one dog turns the hare, serves himself, and turns her again, it is as much as a cote, and a cote is accounted two turns.
10. If all the course be equal, he that bears the hare shall win; and if he be not borne, the course should be adjudged dead.
11. If a dog takes fall in a course, and yet perform his part, he may challenge the advantage of a turn more than he gave.
12. If a dog turn the hare, serve himself, and gave divers cotes, and yet in the end stand still in the field, the other dog, if he turns home to the covert, although he gives no turn, shall be adjudged to win the wager.
13. If by misfortune, a dog be rid over in his course, the course is void; and to say the truth, he that did the mischief ought to make reparation for the damage.
14. If a dog gives the first and last turn, and there be no other advantage betwixt them, he that gives the odd turn shall win.
15. A cote is when the greyhound goeth endways by his fellow, and gives the hare a turn.
16. A cote serves for two turns, and two trippings or jenkins for a cote: and if she turneth not quite about, she only wrencheth.
17. If there be no cotes between a brace of greyhounds, but that one of them serves the other as turning; then he that gives the most wins the wager; and if one gives as many turns as the other, then he that beareth the hare wins the wager.
18. "Sometimes the hare doth not turn, but wrench; for she is not properly said to turn, except she turns as it were round, and two wrenches stand for a turn.
19. He that comes in first at the death of the hare, takes her up, and saves her from breaking, cherisheth the dogs, and cleanseth their mouths from the wool, is adjudged to have the hare for his pains.
20. "Those which are judges of the leash, must give their judgment presently before they depart out of the field."

These rules, though established by a duke, and regulated by a queen, rendered the coursing of that period but of a very sterile description. Pointers were used for the purpose of finding the game, and when any of these made a point, the greyhounds were uncoupled as a necessary prelude to the sport which was to ensue. The greyhound then employed was probably larger than even the warren mongrel, resembling more the shaggy wolf-dog of former times than any sporting dog of the present day. To found the era of improved coursing, and for introducing greyhounds of superior form, and higher blood, was reserved for the late princely owner of Houghton.

It is the distinguishing trait of genius to be enthusiastically bold, and daringly courageous. Nothing in art or science, nothing in mental, or even in manual labour, was ever achieved of superior excellence, without that ardent zeal, that impetuous sense of eager avidity, which to the cold, inanimate, unimpassioned, bears the appearance, and sometimes the unqualified accusation of insanity. Lord Orford had absolutely a phrenetic furor of this kind, in any thing he found himself disposed to undertake; it was a predominant trait in his character never to do anything by halves, and coursing was his most prevalent passion beyond every other pleasurable consideration.

There were times when he was known to have fifty brace of greyhounds; and, as it was a fixed rule never to part from a single whelp, till he had a fair and substantial trial of his speed, he had evident chances of having, amongst so great a number, a collection of very superior dogs; but, so intent was he upon this peculiar object of attainment, that he went still farther in every possible direction to obtain perfection, and

introduced every experimental cross from the English lurcher to the Italian greyhound. He had strongly indulged an idea of a successful cross with the bull-dog, which he could never be divested of, and after having persevered (in opposition to every opinion) most patiently for seven removes, he found himself in possession of the best greyhounds ever yet known; giving the small ear, the rat-tail, and the skin almost without hair, together with that innate courage which the high bred greyhound should possess.

## The Modern Laws of Coursing.

As altered and amended from the Code adopted and published by the Thatched House Tavern Committee.

The importance of the stakes run for at many of our Coursing Meetings, and the extremely difficult and delicate duty that devolves upon the parties deputed to decide them, render it most essential that the laws by which this sport is to be governed should be combined in a recognised code, as clear as comprehensive. The subjoined are the rules that have been adopted and published by the Thatched House Committee as the LAWS OF COURSING.

1. Two stewards shall be appointed by the members at dinner each day, to act in the field the following day, and to preside at dinner. They shall regulate the plan of beating the ground, under the sanction of the owner or occupier of the soil.
2. Three or five members, including the secretary for the time being, shall form a committee of management, and shall name a person, for the approbation of the members, to judge all courses; all doubtful cases shall be referred to them.
3. All courses shall be made from alips, by a brace of greyhounds only.
4. The time of putting the first brace of dogs in the alips shall be declared at dinner on the day preceding. If a prize is to be run for, and only one dog is ready, he shall run a bye, and his owner shall receive forfeit; should neither be ready, the course shall be run when the committee shall think fit. In a match, if only one dog be ready, his owner shall receive forfeit; if neither shall be present, the match to be placed the last in the list.
5. If any person shall enter a greyhound by a name different from that in which he last appeared in public, without giving notice of such alteration, he shall be disqualified from winning, and shall forfeit his match.
6. No greyhounds to be entered as puppies unless born on or after the 1st of January of the year preceding the day of running.
7. Any member, or other person, running a greyhound at the meeting, having a dog at large which shall join in the course then running, shall forfeit one sovereign; and if belonging to either of the parties running, the course shall be decided against him.
8. The judge ought to be in a position where he can see the dogs leave the alips, and to decide by the colour of the dogs to a person appointed for that purpose; his decision shall be final.
9. If, in running for prizes, the judge shall be of opinion that the course has not been of sufficient length to enable him to decide as to the merits of the dogs, he shall inquire of the committee whether he is to decide the course or not; if in the negative, the dogs shall be immediately put again into the alips.
10. The judge shall not answer any questions put to him regarding a course unless such questions are asked by the committee.
11. If any member make an observation in the hearing of the judge respecting a course during the time of running, or before he should have delivered his judgment, he shall forfeit one sovereign to the fund; and if either dog be his own he shall lose the course. If he impugn the decision of the judge, he shall forfeit two sovereigns.
12. When a course of an average length is so equally divided that the judge shall be unable to decide it, the owners of the dogs may toss for it; but if either refuse, the dogs shall be again put in the alips, at such time as the committee may think fit; but if either dog be drawn, the winning dog shall not be obliged to run again.
13. In running a match the judge may declare the course to be undecided.
14. If a member shall enter more than one greyhound, bona fide his own property, for a prize, his dogs shall not run together, if it be possible to avoid it; and if two greyhounds the property of the same member remain to the last tie, he may run it out or draw either, as he shall think fit.
15. When dogs engaged are of the same colour, the last drawn shall wear a collar.
16. If a greyhound stand still in a course when a hare is in his or her sight, the owner shall lose the course; but if a greyhound drop from exhaustion, and it shall be the opinion of the judge that the merit up to the time of falling was greatly in his or her favour, then the judge shall have power to award the course to the greyhound so falling, if he think fit.
17. Should two hares be on foot, and the dogs separate before reaching the hare slipped at, the course shall be undecided, and shall be run over again, at such time as the committee shall think fit, unless the owners of the dogs agree to toss for it, or to draw one dog; and if the dogs separate after running some time, it shall be at the discretion of the committee whether the course shall be decided up to the point of separation.
18. A course shall end if either dog be so unlighted as to cause an impediment in the course.
19. If any member or his servant ride over his opponent's dog when running, so as to injure him in the course, the dog so ridden over shall be deemed to win the course.
20. It is recommended to all union meetings to appoint a committee of five, consisting of members of different clubs, to determine all difficulties and cases of doubt.

The following general rules are recommended to judges for their guidance: The features of merit are—

1. The race from slips, and the first turn or wrench of the hare (provided it be a fair slip), and a straight run up.

2. Where one dog gives the other a go-by, when both are in their full speed, and turns or wrenches the hare. (N.B. If one dog be in the stretch, and the other only turning at the time he passes, it is not a fair go-by.)

3. Where one dog turns the hare when she is leading homewards, and keeps the lead so as to serve himself, and makes a second turn of the hare without losing the lead.

4. A catch or kill of the hare, when she is running straight and leading homewards, is fully equal to a turn of the hare when running in the same direction, or perhaps more, if he show the speed over the other dog in doing it. If a dog draws the flock from the hare, and causeth her to wrench or rick only, it is equal to a turn of the hare when leading homewards.

5. When a dog wrenches or wricks a hare twice following without losing the lead, it equal to a turn.

N.B. It often happens when a hare has been turned, and she is running from home, that she turns of her own accord to gain ground homeward, when both dogs are on the stretch after her: in such a case the judge should not give the leading dog a turn.

There are often other minor advantages in a course; such as one dog showing occasional superiority of speed, turning on less ground, and running the whole course with more fire than his opponent, which must be left to the discretion of the judge, who is to decide on the merits.

#### LOCAL RULES.

1. The number of members shall be regulated by the letters in the alphabet, and the two junior members shall take the letters X and Z, if required.

2. The members shall be elected by ballot, seven to constitute a ballot, and two black balls to exclude.

3. The name of every person proposed to be ballotted for as member shall be placed over the chimney-piece one day before the ballot can take place.

4. No proposition shall be ballotted for unless put up over the chimney-piece, with the names of the proposer and seconder, at or before dinner preceding the day of the ballot, and read to the members at such dinner.

5. Every member shall, at each meeting, run a greyhound his own property or forfeit a sovereign to the club.

6. No member shall be allowed to match more than two greyhounds in the first class, under a penalty of two sovereigns to the fund, unless such member has been drawn or run out for the prizes, in which case he shall be allowed to run three dogs in the first class.

7. If any member shall absent himself two seasons without sending his subscription, he shall be deemed out of the society, and another chosen in his place.

8. No greyhound shall be allowed to start, if any arrears are due to this society from the owner.

9. Any member lending another a greyhound for the purpose of saving his forfeit (excepting by consent of the members present) shall forfeit five sovs.

10. Any member running a dog of a stranger in a match, shall cause the name of the owner to be inserted after his own name in the list, under a penalty of one sovereign.

11. No stranger shall be admitted into the society's room, unless introduced by a member, who shall place the name of his friend over the chimney-piece, with his own attached to it, and no member shall introduce more than one friend.

12. The members of the clubs shall be honorary members of this society, and when present shall be allowed to run their greyhounds, on paying the annual subscription.

#### ARTICLES FOR A COCK MATCH.

[We give at the request of several correspondents, the following Form of Articles for a cock-match, by way of Postscript to our series of papers on the GAME-CK. — EDITOR.]

ARTICLES of Agreement made the \_\_\_\_\_ day of \_\_\_\_\_ 184 between W. S. and J. C.

1. The said parties agree, that each of them shall produce, shew, and weigh at the \_\_\_\_\_ Cockpit, on the \_\_\_\_\_ day of \_\_\_\_\_ next, beginning at the hour of seven o'clock in the said morning, \_\_\_\_\_ cocks,

none to be less than three pounds six ounces, nor more than four pounds eight ounces; and as many of each party's cocks as come within \_\_\_\_\_ ounces of the other party's cocks, shall fight for \_\_\_\_\_ a battle—that is, \_\_\_\_\_ each cock, in as equal divisions as the battle can be divided

into, as pits or days play, at the cockpit aforesaid; and that the party's cocks that win the greatest number of battle-matches out of the number aforesaid, shall be entitled to the sum of \_\_\_\_\_ l. as odd battle money; and the sum is to be made stakes into the hands of Mr. \_\_\_\_\_ before

any cocks are pitted, in equal shares between the parties aforesaid; and the parties further agree to produce, shew, and weigh, on the said weighing day, \_\_\_\_\_ cocks, for bye-battles, subject to the same as the main

cocks before mentioned, and those to be added to the number of main cocks unmatched; and as many of them as come within one ounce of each other, shall fight for \_\_\_\_\_ l. each battle, to be as equally divided as can be,

and added to each pit or day's play with the main of cocks;—and it is also agreed, that the balance of the battle money shall be paid at the end of each pit or day's play; and to fight in fair reputed silver spurs, and with fair hackles, and to be subject to all the usual rules of cock-fighting as is usually practised;—and the profit of the pit or day's play to be

equally divided between the said parties after all charges are paid and

satisfied, that usually are thereupon. Witness our hands this \_\_\_\_\_ day of \_\_\_\_\_ 184.

Witness  
J. W.

W. S.  
J. C.

#### RULES FOR MATCHING AND FIGHTING COCKS.

To begin the same by fighting the lighter pair of cocks (which fall in match) first, proceeding upwards to the end: that every lighter pair may fight earlier than those that are heavier.

In matching (with relation to the battles) it is a rule in London, that, after the cocks of the main are weighed, the match bills are compared.

That every pair of deade or qual weight are separated, and fight against others, provided that it appears that the main can be enlarged by adding thereto either one battle or more thereby.

#### ERGOT OF RYE.

Rye is subject to most of the diseases which attack the plants of the family of the *Gramineæ*, such as "rust," "mildew," "burnt ear," and "smut-ball." But there is one remarkable disease which, although sometimes found in wheat, is much more commonly observed in rye. It is called the Ergot, the French name for cock's spur, which the diseased grain resembles in shape. By some perversion of the vital functions of the plant, the germs, instead of growing into a regular seed filled with farina, shoots out a long, black, spungy substance, several times the length of the common seed, which rises above the chaff, and has the appearance of a pyramid, bent slightly on one side. The substance contained therein, is soft, easily broken, and uniform in its internal texture, without any husk over it. If it were merely the loss of the grain of which the Ergot takes the place, the mischief occasioned would be but comparatively trifling, but this spungy substance when taken internally, mixed with the rye flour converted into bread, has a most powerful and deleterious effect on the digestive organs, and when taken in any considerable quantity, it produces the most dreadful diseases. This was first observed in France, where a great scarcity, from the failure of the rye crops, accompanied with a more than usual production of the Ergot obliged the poorer inhabitants of certain districts to make bread of the diseased rye. The consequences were horrid to behold; their limbs rotted and separated from the trunk before death relieved them from their misery. The superstitions ascribed it to witchcraft, but experiments, made on animals by feeding them on Ergoted rye, soon proved the real cause. A similar effect is recorded, and supposed to have been produced by the Ergot of wheat, on a family in the parish of Wattisham, Suffolk, in 1762, of which an account appeared in the "*Philosophical Transactions*" for 1762, and which is mentioned by Professor Henslow, of Cambridge, in a paper, "On the diseases of wheat," in "*The Journal of the Royal Agricultural Society of England*," (vol. II, No. 1, page 17).

The extraordinary effects of the Ergot of rye have made it the subject of experiments in medicine, and it has been extremely useful in some cases. It has now consequently become an article of commerce as a drug, and is chiefly imported from the continent. By an attentive observation of the circumstances which favour this disease in the rye, it might be profitable to cultivate the plant expressly for the Ergot it produces. The seed which grows on the same ear with the Ergot might be selected for seed, and a cold, wet soil, with a barren aspect, might be chosen as the most likely to perpetuate the disease. The Ergot is sold by druggist at from ten shillings to one pound per ounce, so that if only a pound of Ergot could be collected, it would be worth more than the produce in sound grain of an acre of the best land! At all events, it will well repay the trouble in picking out the Ergot from the rye, where it is infected. It is easily discovered, before reaping, from the appearances before mentioned.

HOW TO GET A DINNER.—One evening, Sheridan, not knowing where to go for a dinner, sat down by Michael Angelo Taylor, in the House of Commons, and said, "There is a law question likely to arise presently, on which, for your legal knowledge, you will be wanted to reply to Pitt, so I hope you will not think of leaving the house. Michael sat down with no little pleasure, while Sheridan slipped out, walked over to Michael's house, and ordered up dinner, saying to the servants, "Your master is not coming home this evening." He made an excellent dinner, came back to release him, saying, "I am sorry to have kept you; for after all, I believe this matter will not come off to-night. Michael walked home, and heard, to his no little consternation, when he rang for dinner, "Mr. Sheridan had it, sir, about two hours ago."—*Life of Wilberforce*.

TESTIMONY TO ART BY A DOG.—Mr. John Harrison, painter, of Cardiff, some time ago painted the likeness of a favorite dog, the property of Mr. William Castleugh, ironfounder, of Cardiff. The work was left at the Rummer Hotel, where some gentlemen found fault with particular parts of it. The dog was, therefore, brought to the inn, to be compared with the drawing, and while the observers were pointing out some of the leading features of the picture, so striking was its resemblance to nature that the dog sprang from under a table at the painting and partially defaced it.

## A PASSAGE IN LION HUNTING.

"*Donner en blitzen*, what a night it is!" exclaimed Martinus Appel, the leader of my band of Baastaerds (as the half-bred Hottentots of South Africa are designated), " 'twas well we reached the wagon before night-fall, mynheer."

And so it was; but that the reader may be able to agree with the said Martinus, I must mention, that myself and party of Hottentots had been, for some days, shooting antelopes and gnus, on the wide extent of undulating grass land, styled "the Bontibock flat." On the day in question, we had killed our usual number of antelopes, and, on our return home, had fallen in with, and shot, a very fine male lion, about three miles from the spot where my wagon and tent stood. Slight drizzling rain had been falling all the afternoon, which had, about eight o'clock, changed into one of the heaviest pours I had ever seen. Anxious to preserve the skin of the lion, I had had it brought into the small single round tent, in which I slept, and pegged to the ground, which it occupied more than the half of, while my bed of dried skins covered the remaining space. The Hottentots and myself had just finished stretching and pegging out the skin, when Martinus Appel made the above exclamation, which the weather, certainly, amply warranted. The rain beat down in torrents, and with a violence quite terrific, making the tight-drawn canvass ring like a drum-head, the thinness and diaphanous nature whereof, allowed the incipient lightnings to play, as it were, through and through the tent; while the loud voice of thunder added its terrific base to the plaintive wailings of the oxen, who, tied to the wagon-wheels and yokes, were exposed to the pitiless raging of the storm.

The Hottentots crouched on the ground, near the door of the small tent, while I sat upon my bed of skins, and served out to them their nightly portion of the narcotic weed, and their dram of cape brandy. At length the leader, having swallowed his dram, observed, "It is a bad night this, mynheer, for the wife (the Dutch name for the lioness) to go her rounds; and, if she meets any one on the flat, she will do mischief to night."

"What do you mean," asked I, "by going her rounds?" "Why," replied Martinus, "whenever a lion is shot, its mate, not finding it, traverses, during the succeeding night, every nick of the flat, searching for him; and at such times they are excessively fierce, although they will not touch any game, but traverse the plain openly, and without any attempt at concealment, continually calling to their lost companion."

"Yes," said Janshell (or *Hair Trigger*, a nickname given him for his good shooting), "many a tale used old Hans to tell me of wives searching for their *mannikees*. But come, men, let us take advantage of this momentary lull, and get into and under the wagon to sleep, and let mynheer, too, get to sleep."

"*Goeden nacht*," was pronounced by all; and the baastaerds betook themselves to my wagon, which was about one hundred yards off, and were soon fast asleep in spite of rain and thunder, while I, too, got into bed, and very shortly followed their example, leaving Loudon and Princess, two large Scotch staghounds, to keep their accustomed watch at my feet.

How long I had remained in the arms of Morpheus I know not; but I was suddenly aroused by a sound, as if the thunder had been imprisoned in the earth under my tent, and was striving, with terrific force, to gain its freedom: the earth literally shook. I started up to a sitting posture, and instinctively, without any definite notion of danger, seized my roer (or large gun), which lay by my side, and at the same moment, a flash of vivid lightning shewed me my two dogs in the act of springing through the half-closed doorway of my tent, every tie whereof was broken by the violence with which, in their alarm, they sprang to face the coming danger. A moment afterwards, I heard the rush of the dogs, as in chase of something, and then I struck a light, and, lighting a candle, looked to the caps of both my guns, and slipped a second bullet into each barrel. Having done this, gun in hand, I sat on my bed, with my face to the now open doorway of the tent, fully expecting an attack; for I had, by this time discovered, that the sound which had awoke my dogs and myself, was the roar of the lioness close to my head, she having just scented the warm and steaming skin of her mate, that was spread in the tent by me. In a few minutes the dogs returned, Princess free from hurt, and old Loudon but slightly scratched on the face; both of them, however, in a state of extreme excitement, full of pluck, and very determined, but without that appearance of dash and cockiness which was their wont when their blood was up. They both lay down at the door of the tent, with their heads on their paws, peering into the dense darkness, and every few minutes uttering a low and angry growl as the lioness, who had removed to some distance, made the earth tremble with her peculiar roar. I now bitterly lamented having brought the skin into the tent; but it was too late to remedy the evil. Vainly and ineffectually did I strive to make the Hottentots, or my servants, hear me calling to one of them to keep a look out, and fire, at all hazards, when the lioness re-appeared, if he could see her, as was probable, when she approached the circle of light which the candle shed around, through the transparent canvass of the tent. Tired with their day's work, they would have slept though Jove himself had been thundering in their ears. I had just come to the pleasing conclusion that I must depend on myself for my escape, and

had settled the mode of proceeding as follows, namely, that the moment the lioness appeared at the doorway, I should alit, with my knife, the canvass behind me, and so make my exit, leaving the tent to her, when her roars growing momentarily louder, shewed she was again advancing to the attack. On she came, slowly and quietly, till I could hear her deep growl behind me, and then she went gradually round the tent, as I fancied by the sound, till the dogs saw or scented her. With a growl and a bark away they went at her. A few snaps and growls were heard, and then the dogs returned, again unscathed but by some trifling scratches. It seemed as if the lioness in her anxiety to reach the place where she fancied her mate was confined, scorned to do battle with the dogs, while they were determined to prevent her too near approach to the tent, which, had she once got close to, the inherent dread of fire, that all animals have, would, probably, not have been strong enough to prevent her entering. The above advance and retreat were several times repeated; during the whole period of which I sat on the bed, with one gun in hand, the other by my side, and my long knife lying on the bed, looking through the doorway, in the hope of being able to see and get a shot at the lioness, without exposing myself to her vision, which would have certainly brought her at me at once, at all hazards.

At length the long wished for morning began to dawn; the rain had ceased, and, as the first few streaks of daylight tinged the horizon, I stole to the door of the tent and looked forth. The dogs, who preceded me, stood a few yards in advance, barking and growling at an undefined and undistinguishable object about fifty yards off. I was doubting whether or not I should risk a shot, when the voice of Martinus Appel, in the wagon, was heard, giving out the two first lines of the Dutch psalm, with which my Balfour Hottentots invariably welcomed the morning. Often, and sometimes in peril too, had I heard the voices of these rude, wild men, raised to celebrate the return of the glorious day, but never did sound convey to me the delight which I now experienced. It was not only an assurance of present succour, and of the perils of the night over, but told me that I had those at hand who would aid me in avenging on the animal my disturbance and fears of the past night.

The Hottentots' usual alarm signal—a low, long whistle—brought two of my followers to the tent. They were forthwith despatched on the spoor, or trail of the lioness, which was now seen making off, slowly and unwillingly, across the flat, every moment turning and casting an indignant look at the tent, and then, with her mouth close to the ground, giving vent to her rage, in one of those long deep roars which those who have once heard can never forget. As these sounds grew fainter I lay down, and slept for some hours; and then the party, having breakfasted cleaned their guns, and made every preparation for a severe fight, we started, taking only our stanchest horses, to shoot the lioness, which Janshell and old Hans had marked down, and the latter was still watching while the former came to guide us.

We found her, as we anticipated, very savage (*al te kwai*, Martinus called it), and she nearly disabled a good horse for me; but her skin, that night, was pegged by the side of her *mannikee's*, but not, as may be imagined, *inside* my tent. The lesson of that night should not be forgotten by lion hunters.

## LORD BARRYMORE AND LORD G. BENTINCK.

It may seem strange to institute a comparison between a young nobleman who perished two-and-fifty years since, being then only twenty-four, and my Lord Bentinck, who is now forty-three, and the acknowledged "Napoleon of the turf;" but what Lord George now is, Lord Barrymore was rapidly becoming when a fatal accident deprived him of his life. The same love of racing, the same enthusiasm during a race, the same desire to carry the details of sport as nearly as possible to perfection distinguished both.

Lord Barrymore came on the turf in 1787 (he was then but 18). The first racer he bought was a filly called Yarico; he matched her against Mr. Davis's Copernicus, and won. The next year he bought of Mr. Bullock (the Gully of that day) Elm, Alarm, Jericho, Rockingham, Gray, Pumpkin, and Sir Christopher; of Mr. Vernon, Nimble; and of Sir John Lade, and others, Freenow, Brewer, Columbine, Tipsey, Ventilator, Tinker, and Tiffany. Thus, at the age of nineteen, he had sixteen first-rate horses; for Rockingham alone he gave 3,000 guineas; he won large sums by this horse, and declared him to be the cheapest horse he ever bought. Rockingham's last run was in a match with a mare (Mr. Wentworth's) for 300 guineas; Lord Barrymore rode Rockingham, and won. His lordship was considered the best gentleman rider in England. In 1789, he bought Skewball of Sir John Lade; he also purchased Skiff, Highlander, Tom Thumb, Smoke, The Captain, Palafox, and Tass. In 1790, Sir Charles, Musquito, Imprudence, Tully, and Kiss-my-Lady, from Sir John Lade's stables; Pilgrim he bought of Mr. Bullock; Little Flyer, Chanticleer, and Seagull of Charles James Fox; for the two latter he gave 4,000 guineas. By Chanticleer he made vast sums, and afterwards (1792) sold him to the Duke of York for 2,700 guineas. Chanticleer beat Lord Grosvenor's Asparagus several times for 500 guineas each match, Lord Barrymore won in bets alone between 15

and 16,000*l.* on the events. "Why did you sell him?" said the Duchess of Bolton. "He was too good, your grace," was the sportsmanlike reply. In 1791 Lord Barrymore bought Moose, Pat, Old Gold, Halbert, and Treecreeper, of the best of the day; he was then just twenty-one years of age. The parallel between the two Lord B's is best expressed in this description of Lord Barrymore at that period. "In all matters pertaining to the turf he was proficient. The veterans would ask 'What does Lord B. say?' No man was a better judge of pace, he knew every horse's distance to a length. He was the universal handicapper; in fact had not his other pursuits been equally notorious, you would have thought his heart and soul occupied by the turf alone." There the parallel ends, for Barrymore lost at night at cards more than he won in the morning on the course. He raised a little before his death 130,000*l.* towards liquidating his debts; he also sold his stud, and devoted it to the same purpose. Sir John Lade said of him "He had more of what they call genius for the thing (sporting) than any man I ever met or heard of. He was the best gentleman rider and coachman I ever saw; the latter over all sorts of roads, and with all sorts of cattle; he would drive a rattler through Petticoat-lane, as readily as he would his own curricule in the Park."

As many may not know the manner of Lord Barrymore's death we shall describe it, though it was nothing to do with the partial parallel we instituted. Lord Barrymore was a lieutenant of the Berkshire militia stationed at Rye, and was marching a party of French prisoners to Deal. They marched through Folkestone to the top of the succeeding hill, and halted at a small public-house to refresh his men and the prisoners. Admiral Macbride and General Smith met his lordship there; he was in high spirits, and accepted an invitation to dine with them at Deal. Lord Barrymore had marched at the head of a party from Rye; he now ordered his valet-de-chambre, who drove his curricule in the rear, to procure him a pipe of tobacco, saying "I'll ride and smoke while you drive." He was in high glee, counted up the score with chalk on a slate à la Boniface—imitated Hob, from "Hob in the Well," a farce he was very partial to—treated all about him—gave the landlady a kiss, and leaped into the curricule. He gave the fuses to his servant, who placed it carelessly between his legs and drove off. They had scarcely proceeded fifty yards when the piece went off. The contents entered his lordship's right cheek—forced out the eye and lodged in the brain: he was pointing to the coast of France at the moment. He lived forty minutes, grooming heavily, but never spoke again. The fusée was loaded with swan shot; he had been killing gulls and rabbits on his way from Rye to Folkestone. An inquest was held on the 8th of March, the verdict "Accidental Death." He was interred on Sunday, March 17, 1793, in the chancel of the church at Wargrave.

#### SPORT IN THE PAST GROUSING SEASON.

The pursuit of the grouse, it is well known, ceases in December, and the business of the fowling-piece may now be said to be on the wane. Partridges, however, are still fair game; but, unless in places where they have been but little disturbed, they will not suffer the approach of the sportsman. Partridges have been found in great abundance, as we have observed in former numbers; more were killed than usual, yet more than usual will be left at the close of the season, which we need hardly observe, is the close of this month, or, as some persons interpret it, the 1st of February.

The season for the pursuit of the pheasant closes at the period already mentioned. These birds, in many places, have been slaughtered by hundreds in the way of battue-shooting, and many hundreds more will fall in the same wholesale way during the present month. A much wiser and better plan than was formerly followed, in respect to the propagation of these beautiful birds, has been lately adopted in many places, and will, no doubt, become general. The male bird, which was uniformly marked for indiscriminate destruction (under the mistaken idea that the female would be sure to find a mate), is now more sparingly killed. They are left in the proportion of one male to three females, which is as it should be. The shooting season for grouse, ptarmigan, and black game, ended on the 10th December, and the mountain solitudes are now left to repose under the snows of winter. The bygone season has proved a very bolsterous one throughout to the sportsman; hence, more than the usual stock of game remains for another year. From the courtesy of our southern friends we are enabled to give some notes of their sports. On the Glengarry moors, C. P. Leslie, Esq., M.P., Lord Huntingfield, Lord E. Hill, and the Hon. P. Talbot, bagged 172 brace of grouse, black game, and ptarmigan, 4 red deer, and 14 roe deer. At Farnakyle, J. W. Eyston, Esq., Mr. Goodlake, and Mr. Gatacre, shot 1,400 brace of grouse, 100 brace of ptarmigan, and 21 red deer, nearly all stags. On the Auchintoul shooting, S. Bateson, Esq., Mr. Water, and Mr. Beresford, shot 400 brace of grouse and six stags. One of these, stalked by Mr. Bateson, had a noble head of large horns, of the most admired form. They were in length 34 inches, span inside of the bows 80½ inches, space from tip to tip of top antlers, 35 inches, four brow antlers 10 inches in length each, forming a semicircle in front of the head. Colonel Towers stalked two stags, with fine heads, at Aulnaharrow. At Lochkreig, W. H. Clarke, Esq., bagged 600 brace of grouse. Mr. Clive, Mr. Ince, and Mr. Merrick

had 803 brace at Kinrara. On Lower Killin moors Mr. Eversfield, Mr. Ibbetson, and Mr. Tredcroft had upwards of 1,000 brace. J. M. E. Jones, Esq., at Lomberoy, shot 2,000 head of game, consisting of grouse black cock, and ptarmigan, also, 2 rein deer. The Auchinault party, Captain Chearnley, and Mr. Chearnley, Mr. Flood, and the Hon. C. E. French, bagged 3,700 head of grouse, ptarmigan, and black game, 9 red deer, 11 roe; and in one of the lakes Captain Chearnley caught, with a small rod, 70 pike. At Rosehall, J. Jones, Esq., and Mr. Gade, shot 550 head of grouse, and 7 roe deer. At Inverbroom, Sir St. George Gore, Bart., had excellent sport on the moors; and from the deer forest he shot 15 stags and 11 roe deer; one stag was the largest seen in that part of the country—his weight was upwards of 26 stone, and the tops of his horns were broken off, either from combating an adversary, or falling down a precipice; the feet were uncommonly large, and part of the shin was of a deep brown colour, approaching to black.

#### AMERICAN BOWLING ALLEYS.

Anything new in the field of healthful, manly sports is deserving our special notice. We have to announce the introduction, for the first time in this country, of the American game called "Bowling Alleys," which is capable of eliciting the science shown at bowls, and also affords the muscular exercise enjoyed by nine-pins or skittle-players, but the Bowling Alleys, (a game combining Skittles and Bowls in one) are likely to prove a gentlemanlike substitute for the now much vulgarised English game of "Knock 'em down."

The first trial of Bowling Alleys has been made in the Saloon of the National Baths, Westminster road, which has been converted into a novel kind of skittle ground. Many gentlemen, admirers of such diversions, as quoits, bowls, golf, &c., attending to participate in the amusement of the new game.

Bowling Alleys is played in the following manner. First, to describe the machinery in the game. Three long alleys or stages, constructed on a wooden framework, run on a level for upwards of 80 feet distance, to what must be termed diminutive skittle-frames. There are ten pins instead of nine (the usual number) to each frame. The pin or skittle used is smaller, considerably, than those used in the English game, being only five inches in circumference, at the bulge. The skittles are ranged diamond shape on the plane, and stand at equal distances from each other. The player, stationed at the foot of any one of the alleys, bowls a heavy wooden ball up the stage, aiming at the centre-skittle, which he hit properly is the science of the game; for a "flore," or the tumbling down of all the skittles is generally the result of good bowling. The difficulty consists in casting the ball so that it shall run centrally along the alley. An inexperienced player is almost sure to run his ball off the stage before it arrives at the frame. With practice, however, the bowling alleys are soon understood well enough to bowl correctly. The inventor of the game stated to the writer on the ground that in the United States ladies were particularly partial to the sport, and he referred to a Baltimore beauty, who had floored the skittles eight times successively. One of the gentlemen present on Thursday, who had never played before, knocked down the ten pins at one bowl twice following. But ordinarily, they are not to be got down under four, five, or six bowls.

The saloon is handsomely fitted up, suitably to the game; and one remarkable part of the fittings may be here mentioned. Alongside of each alley runs an ingeniously constructed gallery, on an inclined plane, on which the balls are placed when taken up from the frame, to be returned on the locomotive principle to the player.

There can be little doubt that the game of Bowling Alleys will become equally popular in this country as in America.

#### THE FLEET STREET RACES.

A very animated race took place last Tuesday at this celebrated meeting. The City Tollman and the Butcher-Boy started precisely at three from the corner of Chancery Lane, and went off in beautiful style, the Butcher-boy taking the lead, though he carried many pounds extra-weight, and maintaining it as far as St. Dunstan's Church. Opposite Serjeant's Inn, he was full two wheels ahead of the City Tollman, but when they neared Bouverie Street, the City Tollman picked up a bit, owing to the badness of the ground, and was gaining rapidly upon the Butcher-boy, when the latter, by dexterously applying the whip, shot by before him, and completely distanced him. He would certainly have won the race, in glorious style, if a Patent Safety driver, who was quietly exercising his horse up and down the middle of the course, had not cut in before him, and nearly thrown him from his seat. As it was, the Butcher-boy protested against the City Tollman pocketing the stakes. The winner was not claimed. We feel bound to state, before concluding our report of this well contested race, that the police regulations all along the line were shamefully deficient, and that the grand stand was occupied as usual by the same number of unhired cabs.

A western editor, who is an old bachelor, says, "We never cared a farthing about getting married until we attended an old bachelor's funeral. God grant that our latter end may not be like his."

# ADVERTISEMENTS.

**THE MAMMOTH HORSE. — MR.**  
 Carter's Colossal Horse continues to attract crowds of sitters, but as he will positively leave town in a few days for America, Mr. Carter begs to remind those persons who have not yet seen this remarkable animal, aptly termed the "Model Horse," that the present time is the only opportunity they will have of viewing the largest horse in the world. Count D'Orsay says, "he is a magnificent animal." The Mammoth horse is 20 hands in height, and weighs 5,000 lbs. He will be exhibited at the Egyptian Hall, Piccadilly, from 11 a.m. till 9 p.m. Admission 1s.

**G. Y. BALL,**  
**REGISTERED DAGUERROTYPYAN PORTABLE**  
**LOOKING GLASS.**  
**NOVELTY, UTILITY, CONVENIENCE,**  
**COMFORT, AND ECONOMY.**

**THE DAGUERROTYPYAN Looking Glass.**  
 If you value personal comfort, neatness of appearance, cleanliness and acceptability at the social board, or the society of the fair sex, provide yourself with the last triumph of cheapness, ingenuity, and utility. It is a portable pocket mirror, in a brass case, suited to suspend against the wall, hold in the hand, lie flat, or be self-supported at an angle of forty-five degrees on table or shelf, presenting in a commodious form a looking glass, a shaving reflector, and an invaluable counsellor after the heat of the race, the tide, the promenade, or before the entering a ball room, and in fact no person ought to be without one.

To be had Wholesale and for Exportation at 86, Newgate-street, London.

**SHIPPERS, MERCHANTS, AND COM-**  
**MERCIAL TRAVELLERS** are respectfully requested to inspect the **DAGUERROTYPYAN LOOKING-GLASS.** It will be found the most novel, useful, attractive, and saleable article at home and abroad, in the City or the provinces, ever offered to their notice. The Registered Proprietor and Manufacturer, **G. Y. BALL**, is prepared to execute orders in any amount, for the various sizes of the **DAGUERROTYPYAN Looking-Glass**, on terms particularly advantageous to dealers.

86, NEWGATE-STREET, LONDON.  
 December 16, 1845.

THE MOST POPULAR WORK OF THE DAY.  
 On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence  
 Volume I. of  
**THE MYSTERIES OF LONDON,**  
 By George W. M. Reynolds,  
 Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.  
 \* \* This magnificent volume contains 424 royal octave pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies.  
 London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

**EVERY MAN HIS OWN HARNESS MAKER.**

**THE DURHAM DUCIE HUNTING AND**  
 Travelling Knife.—J. B. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of noblemen, gentlemen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.  
 By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

"Windsor Castle, Oct. 4, 1845.  
 "Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

Perfect Freedom from Coughs in Ten Minutes after use, and a Rapid Cure of Asthma and Consumption, and all Disorders of the Breath and Lungs is insured by

**DR. LOCOCK'S PULMONIC WAFERS.**  
 The truly wonderful powers of this remedy have called forth testimonials from all ranks of society, in all quarters of the world. The following have just been received.

Another Cure of Twenty Years' Asthma.  
 Extract of a letter from Michael Grose, Esq., Redruth.  
 Dated March 18, 1845.

"Gentlemen.—Please to send me a 11s. box of Dr. Locock's Wafers, by return of post.  
 "I thank God that I have found more benefit from three 2s. 6d. boxes, which I have taken, than from all other medicines I ever took for the last twenty years, and I am in hopes that I shall soon be restored to my former health, &c.  
 (Signed) "MICHAEL GROSE."  
 Cure of Incipient Consumption in Blackburn.  
 Blackburn, Aug. 30, 1845.

"Gentlemen.—I have much pleasure in adding to the great number of your testimonials, that of a youth now in my employ, who has derived incalculable benefit from the use of your Wafers.  
 Having suffered for some time from a harassing cough and an affection of the lungs, which to all appearance would have terminated in consumption, he was induced to try Dr. Locock's Wafers, and the result has indeed been most gratifying, as his cough soon left him, and he is at present in the enjoyment of good health. You are at liberty to publish this.

— **WM. LONSDALE, Chemist.**  
 The particulars of hundreds of Cures may be had from every agent throughout the kingdom and on the Continent.  
**DR. LOCOCK'S WAFERS** give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

TO SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.  
 Price 1s. 14d., 2s. 9d., and 11s. per box; or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bride-lane, Fleet-street, London. Sold by all Medicine Vendors.

**WAR WITH AMERICA.**  
 Now Publishing, in Penny Numbers, Weekly, and Sixpenny Parts, Monthly.

**THE PICTORIAL HISTORY OF AMERICA.** By JOHN FROST, A.M.  
 It will comprise all the authentic Historical Information relative to that enterprising nation, from its discovery to the present time. Embellished with beautiful Engravings.  
 London: Willoughby and Co., 89, Aldersgate-street, and all booksellers.

**NOW PUBLISHING,**  
 No. 5 of a Romance of Real Life, entitled,  
**LIFE IN LONDON.**  
 By J. Herbert Thorneley, Esq.  
 Embellished with first-rate Engravings, and printed upon a Large Royal Paper of excellent quality. Numbers One, Penny each. Monthly Parts, in Embellished Wrapper, price 6d.  
 Part I is now publishing.  
 E. DIPPLE, Holywell-street, and all Booksellers.

**THE EARL OF ALDBOROUGH**  
 CURED BY  
**HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.  
 Extract of a Letter from the Earl of Aldborough, dated Villa Maestria, Leghorn, 21st Feb. 1845.  
 To Professor HOLLOWAY.—

SIR,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment in case of any of my family should ever require either.  
 Your most obliged and obedient servant,  
 (Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout THE CIVILIZED WORLD, at the following prices:—1s. 14d. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.  
 N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**  
 on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 15, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 140, Leadenhall-street; Purkiss, Compton street, Soho, and all Booksellers.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

**THE CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; of stinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., with which 11s. are saved. The Five-pound cases may be had as usual.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.  
 Consultation fee, (if by letter), 4s. A minute detail of cases is necessary.  
 Messrs. Perry are in daily attendance, for Consultation, at their residence, 15, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.  
 At 106, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deansgate, Manchester, on Mondays, Tuesdays, and Wednesdays.

**LONDON**.—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIPPLE.— Thursday Jan. 15, 1846.

## THE KEEPER'S TREE.

(Continued from page 549.)

At no time of the year are the energies of the keeper so much called into action against his enemies as in the spring. At that period most of them are occupied in rearing their young, and, rapacious at all times, their rapacity is then doubled. In June, when the sports of the field are at a stand still, the destruction of vermin, and the preservation of the clutches of eggs and the nides of young birds, which so frequently are cut over by the scythe of the mower, should be now the keeper's chief care. Now is his time to seek out the nest of the buzzard and the hawk—generally in some old oak in the depth of the forest—and when the old bird is on the nest blow the whole into the air.

The nest of the magpie is more easily discovered. In some small thorn spiny, or at the edge of the wood, does this chattering pilferer build its nest; and as evening draws on the old couple may be seen departing from bough to bough, and their incessant clamour betrays the locality of their abode. I have often been surprised, considering the general shyness of this bird, at the little caution with which it usually selects its breeding place. Often do we see its nest perched in a solitary ash tree, in the middle of a hedge-row, with scarcely a bough to screen it from the eye of its enemies, and often does it approach the habitation of man, and build its nest close to his abode.

In a small plantation in front of my house, a couple of magpies every year build their nest in the same fir, and though for the last three years the old birds have been shot, and the eggs or young destroyed, yet each succeeding winter brings another pair, who as soon as twilight draws on, are seen in the air at an immense height over the plantation, into which they will drop like a stone, and after a little chattering, and hopping from one tree to another, they retire to roost, and always leave at day-break. Magpies are great enemies to the eggs of all kinds of birds, and will kill the young of all the smaller species, though they seldom attack those of the larger ones. As we shall have more to say under our usual head of British Birds, on the habits of this audacious pilferer I here refrain from further remark, and proceed to the JAY, which is closely allied to the magpie by its chattering and pilfering habits, and which for beauty of plumage stands nearly unrivalled on the list of British Birds. This bird is common in all parts of England, and scarcely a spiny or cover is without a pair, and their harsh grating voice, as they chase one another down the tall hedge rows, or fly from tree to tree, uttering the note of alarm as soon as the sportsman enters the wood, must be familiar to every one who has lived much in the country. Though the jay can be scarcely called a bird of prey, yet it occasionally kills young birds, and commits great depredations on the eggs of game as well as other birds, and is therefore a worthy subject for the keeper's tree. It forms a rude nest, generally in some young tetter in the middle of the spiny, and lays four or five eggs, speckled like those of the jackdaw. The young ones may be easily destroyed on a summer's evening, when five or six hold a kind of assembly in a clump of oaks outside the wood; and when, like many other orators, they are too fond of listening to their own voices to heed any thing else, a good double shot may then be obtained before they have noticed the approach of the gunner.

The young of the carrion crow—*corvus corone*, a bird not very common with us—are generally on the wing by the first of June. The nest of this bird is mostly to be found in the depth of the wood; and the eggs are not unlike those of the raven. Wary and shy in all its habits, with an eye that can perceive its prey at a great distance, and as acute as any of our birds of prey, the carrion crow is not only a dangerous enemy to the keeper, but one very difficult to destroy. Its chief prey is the dead carcase of any animal; eggs of all kinds of birds; and any wounded bird that comes within range of its vigilant eye. These birds always live in pairs, and often is the weary sportsman, while returning in the evening through the narrow riding of the wood, startled by the hoarse croak of a couple which he has disturbed, and which, as they fly to some neighbouring oak, disturb the silence of the forest with their discordant voices.

The habits of the raven are very similar to those of the carrion crow, but they are so seldom found in our inland districts as hardly to come within my list. Occasionally a pair of those birds will fix upon some high tree in a park and bring up their young, though they are more frequently met with on the cliffs on some parts of our coasts, especially at the back of the Isle of Wight.

The hooded, or—as it is commonly called in Northamptonshire—the Royston crow, and the jackdaw, are both classed among the keeper's enemies, and though they are harmless compared to many others, are yet a fair object for his pursuit.

The nest of that stealthy cautious bird the owl, is usually difficult of approach. A pair of those birds will for successive years occupy the same ledge in the old belfry, the same hole in the gable end of the old barn, or the same hollow pollard in the wood or hedge-row adjoining, from whence as soon as the shades of twilight envelop the earth, they commence their discordant screech, or melancholy hoot, rendered more audible and solemn by the stillness which then prevails. The owl is seldom seen by day. As soon as the face of the country is ever-shadowed by the sober grey of evening, this solitary bird sallies from

its retreat, and, even in the dim twilight of summer, its form may be indistinctly seen through the mist flitting by on its steady course, either beating the fields regularly, like a sower in search of game, or hovering over the top of the barn or hedge of the stack, in quest of mice or other prey. Now is the time to shoot them. For though shy and timid by day, they appear at dusk to lay aside their fear, and will frequently approach near enough to be knocked down with a stick. The two species most commonly met with are the yellow or barn owl, also called the screech owl, and the tawny or common brown owl, called also the howlet. Both I believe equally destructive to game: both lay five or six whitish eggs in a rude nest, and bring up their young in the same manner.

By far the most numerous of the larger species of birds of prey, and which are well known to every sportsman and keeper, are the genus *Falco*—falcons, hawks, and buzzards. The king of birds, the eagle, is rarely met with in our southern latitudes, but in the dreary wilds of the mountainous districts of the Highlands, where human foot rarely wanders, and where the mountain roe, and ptarmigan, offer a more tempting quarry than can be met with in our midland districts, does this bird fix his eyrie, on the side of some rock, inaccessible to the boldest mountaineer. One was shot by a keeper as passing over Lilford park, in this neighbourhood some years ago. It was the white-tailed eagle, I believe the commonest of the whole tribe.

The peregrine falcon is another rare visitor to our shores, though it is not unfrequently met with in the wilds of Ireland.

The next on our list, and one which is not so common in our country, is the buzzard; of which genus the common and the moor buzzard are most frequently killed by the keeper. Though a most rapacious, this is a cowardly bird, and rarely, till compelled by hunger, will it leave its favourite tree, perched on the top of which it may be seen for hours, patiently watching the approach of any small bird that may fly within its reach. The common buzzard frequents all parts of England, especially the fenny districts, and I have seen eight or ten in the air at one time, wheeling in circles over the mead-beds and sedge on the margin of Whitestone-mere, and the fens near Yarmley. The water-rat and moor-hen form their favourite food, and last winter I killed one of that rare species, the honey-buzzard, as it rose from a reed bed by the side of the Nene, with a rat in its claws. The common buzzard builds its nest generally on a high tree, difficult of access, and lays two or three dirty white eggs. The moor-buzzard builds in a bush near the ground; and the nest of the honey-buzzard I never saw.

The common kite, or glead, is another of the keeper's most rapacious enemies, nor are the depredations of this bird confined to the sportsman alone, but the poultry-yard often suffers sadly from its attack. Bolder by nature than the buzzard, (from which it may easily be distinguished while in the air by its forked tail,) it oftener approaches the habitation of man, and may frequently be perceived wheeling over the farm-yard or homestead, on the watch for any chicken, young duck, gosling or turkey-poult, that may have strayed too far from the brood. No one can observe the common hen upon such an occasion, (hurrying to and fro, her wings dragging on the ground, and feathers ruffled over her body, calling her young ones together, and showing by her angry gestures that she will forfeit her life in their defence), without pausing in admiration as he beholds this example of maternal solicitude. Notwithstanding all her care, sometimes a chicken which has strayed too far and has lost itself in the grass, catches the eye of the ruthless marauder, who descends with irresistible force, and rises into the air with its struggling victim in its claws. The glead is generally taken in the same manner as the other large birds of prey, namely, in a steel trap placed on a hillock, usually by the side of a bush in a conspicuous situation. The trap is covered with grass, and the bait is either a young rabbit cut open, or some kind of bird, whose feathers are strewn around the trap.

That beautiful species of hawk the hen-harrier, is another most destructive bird of prey, and though not so common as the other kinds of buzzards and hawks, is frequently found near us in the beginning of the season. The male of this species is of a blue ashen colour, while the female resembles the buzzard, and goes by the name of the ringtail. To a rapacious disposition this bird adds extraordinary boldness; and any one who has observed it beating over a stubble-field, cannot but admire the manner in which it quarters its ground. It seems partial to the river side, as I have frequently observed them, while snipe-shooting, beating over a reed-bed. It builds on the ground, but I have only once succeeded in finding its eggs, and that was in a marshy meadow, near Oundle, in a bunch of reeds. They were four in number, of a deep red colour, spotted with white.

Of the tribe of hawks which frequent our woods, the most common are the sparrow-hawk, the hobby, and the kestrel. Of the three, the second is the most scarce, and the last the most common. The hobby is about the size of the sparrow-hawk, and may be easily known by the dark black spot behind each eye. The kestrel is larger, and the male and female differ so much as scarcely to appear to be of the same species; the male being of a bluish lead colour, spotted with black; while the female is of a beautiful brown, very much variegated with black. The eyes of this species are black, while those of the other two are of a yellow or orange

colour. The sparrow-hawk is of a dusky leaden hue, the tail barred with black, and may be distinguished by the streak of white which runs across the back of the neck. The habits of the whole genus are nearly alike. They choose much the same places for building, either in old ruins, or in the hollow of decayed trees, and not unfrequently in the old nest of a crow. The female sparrow-hawk lays five or six eggs spotted with red. Those of the hobby are a bluish white; and those of the kestrel deep red, spotted with black. They are rapacious and fierce in their disposition; and are by far the most numerous and obnoxious of all the British birds of prey. Like most thieves they unite great cunning to their other attributes, and seldom come within range of the gun, but are chiefly taken in traps placed in the same manner as for the larger birds of prey. In all our birds of prey the female is the largest.

Although the heron or hern cannot be classed among the enemies of the game preserver, it is nevertheless so great a destroyer of fish, that every sportsman should consider him as a common enemy, and never lose a single opportunity of ridding the fish-stew and river of this foe to the sport of the angler. In the day time this bird may be observed standing perfectly motionless for hours together up to its knees, in some shallow ford and in the river, or by the edge of a pond or meer, almost always in such a situation as not to be taken by surprise. Here he will patiently wait till a fish approaches within reach, when he darts on his prey, and bears it away to a distance, where he quickly swallow it and returns in search of more. Sometimes he will watch for a whole afternoon without appearing to catch a single fish. Their nest is easily found; a colony of these birds fixing on a clump of high trees in a park, where for ages successive generations will bring up their young; leaving their nests and returning to them each season in the same manner as rooks. They may sometimes be shot in the evening by a person stationed under any tree near the river side which they frequent, and they are sometimes taken in a wire noose pegged to the bank of a pond or river, where they are observed watching for fish.

### BRITISH BIRDS.—NO. XXVIII.

THE BITTERN.

**T**HIS handsome marsh-bird inhabits most of the fenny districts, where it breeds, making its nest in April with the leaves of water-plants, on some dry clump among reeds or rushes. The female lays six or eight eggs of a pale greenish colour. Hawks, which plunder the nests of most water-fowl, seldom venture to attack that of the bittern. Concealing itself in the midst of an extensive marsh, it lives upon frogs, insects, and vegetables during the summer; but in the autumn it repairs to the woods in pursuit of mice, which it seizes dexterously and swallows whole. The bill is four inches long, of a greenish brown colour with jagged edges; legs, of a pale green; claws, long and slender; the inner side of the middle claw finely serrated, for the purpose of holding its prey more securely; the breast feathers, long and loose; the plumage of the bittern is, indeed, beautifully variegated. The most remarkable trait in this bird, however, is that hollow dismal noise which it commences in the spring and ends in the autumn, and which distinguishes it from the

feathered creation. To describe this booming, as it is termed, is impossible; it must be heard. However awful these loud bellowing explosions may seem to us, they are the calls to courtship or of connubial felicity. As the bittern flies sluggishly, it presents an easy mark to the gunner, and though generally timid, when wounded, makes a desperate resistance. At the latter end of autumn, however, in the evening its wonted indolence appears to forsake it, and it soars into the air with a spiral ascent to a considerable height, making at the same time a singular noise very different from its former boomings. In the reign of Henry VIII. it was held in great esteem at our tables. Its flesh has much the flavour of the hare, and nothing of the fishiness of that of the heron. In some districts it is called the bitter-bum, and in others the miredrum.

In a delightful little work entitled "Observations on the Fauna of Norfolk," by the Rev. Richard Lubbock, Rector of Eccles, we find the following remark on this bird. (We shall shortly make a few extracts from this work on the subject of the Norfolk decoys):

"The bittern has decreased much in number in the last twenty years. I remember when these birds could be found with certainty in the extensive tracts of reed about Hickling broad and Heigham sounds. Four or five might be seen in a morning. The nest and young of this species appear to have been always difficult to find. After diligent inquiry, I could ascertain only two instances in which the nest had been seen with the young. In both these, and this is a curious fact, the finders asserted to me, that, of four young in the nest, two were apparently much older than the others: so great was the difference, that they spoke of one pair as more than half grown and nearly fledged, and the other pair covered with nestling down, and but a few days hatched. There is a similar notice with regard to the habits of the white owl, and its nest containing young of different ages, in Mr. Yarrell's *British Birds*. Besides the bitterns which still breed here, a few migrate hither in autumn. From its skulking habits, and its being nocturnal, this bird appears rather rarer than it is. It seems to dislike broad sunshine as much as the owls. One, compelled to take flight in the full blaze of a July noon, flew hither and thither, as if quite dazzled and confused by so much light. Mr. Yarrell, speaking with caution, says that he can verify only three instances of the bittern recently breeding in England; but I believe that a few pairs still regularly breed around our larger broads. The difficulty of finding the nest, was, as I have said, very great, when the bird was far more common than at present. The want of actual knowledge of the nest itself does not in the least invalidate the fact of the bird breeding with us. A water dog once brought me a very young bittern; but, from the precarious nature of the reed bed, and the difficulty of moving even a few yards further, I could not discover the nest whence he took it. I have many years back seen several killed, in the same morning in August, by sportsmen searching for young wild ducks, and it was easy to distinguish young birds from those more aged. The bittern probably breeds early in the season: I find amongst my friend Girdlestone's notes, notice of a bittern shot at Ranworth on the 18th of May in the act of feeding her young ones. The bittern has been shot with a water-rail, a bird of some size, whole in its stomach; and Sir T. Browne speaks of one which he kept tame in his garden, which managed to subsist greatly upon small birds, which it caught when they were tempted down by corn scattered to allure them.

### COURSING AND THE GREYHOUND.

(Continued from page 546.)

#### SECTION VII.—THE JUDGE.

**W** E now come to the responsible, arduous and unthankful office of the judge (or tryer) of a course. We have said he has a most arduous as well as a most unthankful office to fill, for he must both do justice, and give satisfaction to all parties; and in a field of fifty sportsmen, where each prides himself upon his individual discernment, this you will say in no easy matter to accomplish. Moreover, he must have an eye to see, and a head to retain; a judgment to discriminate, and a confidence to declare; and, unawed by the silly babble of the multitude, follow the disinterested impulse of his own unbiassed skill. He should also be a bold and good horseman, and of such rank in society as to be above the temptation of a base or mercenary action: in a word, he should come recommended by his experience, respected for his worth, and pleased with his employment. His station in the field should be constantly in advance, forming a line of demarcation betwixt the company and the slipper\*, so that when a hare is started nothing may impede his view of both her and the dogs; and in order still more effectually to assist his observations, the crowd should never intrude themselves within the forbidden space, nor by hallooing first, "now black, now blue," "now blue, now black," bewilder his divided attention; in fact, it would be politic if upon these occasions the judge was to exclude this auricular intelligence, and abide solely by the evidence of visual testimony; unless,

\* The slipper, or, in other words, the person to whose care the dogs in couples are committed, is a person of no mean consequence, and ought to possess considerable powers, for he should never be allowed to ride.

indeed, like the philosopher of Molière he could destine one ear, "pour les langues scientifiques et étrangères, et l'autre pour la vulgarie et la maternelle." The system of enclosing open fields and commons, which increases annually, makes it more than ever necessary to have a JUDGE well mounted, which, without a very considerable salary, it is impossible he can do individually. The members, therefore, of every coursing society would do well to consider this, and take upon themselves alternately to prevent the possibility of any disappointment occurring, as it frequently happens that a course must of necessity remain undetermined when the horse of the judge either balks a fence, or, in attempting to clear it pulls away a whole rood of railing after him: not but there are some men who, let the event be ever so properly decided, still remain discontented, and think they see with so much better eyes themselves, that no fair reasoning can prove to them the absurdity of their pretensions. It is however a happy circumstance that there are those faithless beings; it no doubt promotes an amusement which might otherwise perhaps sometimes stand still, and though these unfortunates are generally obliged to seek for consolation amidst the lamentations of disappointment, they constantly attack you with renovated vigour, "nor dread," as Ovid terms it, "to implore the assistance of a deity whose sanctity they had previously violated." It is indeed amusing to witness what little decorum they observe in transactions of this nature, and how trifling a circumstance will throw a gloom over that countenance which the moment preceding shone in meridian splendor! I have known instances notwithstanding where the decision of a judge has been very far from correct. A judge should only decide upon what he absolutely sees, and not on matters of supposition or hearsay. Indeed, I think it better where a match takes place for any considerable sum of money, to have it judged by a gentleman; for whatever we may hereafter think of his decision, we must at any rate refrain from giving utterance to our thoughts, and though the judgment of the common judge might have been equally correct, in the one case we necessarily avoid a discussion, which, under the supposed dependent circumstances of the other, we perhaps feel ourselves authorised in prolonging. It is, however, a hard matter to persuade any man of the falsity of his opinions; especially if he pride himself upon the quality of his experience, and all the beating in the world will never drive him to the adoption of a more wise and profitable system.

It was customary some years ago, when a number of dogs were to contend for the same prize, to run the whole together, and if any two or more of them were so alike as not to be perfectly distinguishable in a crowd, to tie different coloured pieces of ribband round the neck of each, so that the judge might be better able to judge of their several performances; this plan has been very wisely abandoned, and substituted by another much less liable to create confusion; the name of each dog is now written upon a separate piece of paper, and the whole are thrown into a hat or any similar situation where they can be drawn out by two at a time; according to the number of dogs these form a main of so many matches, and the winning dog of each attacks the next in succession, until the contest is reduced to a single trial. This is certainly the only plan which can be pursued with any degree of accuracy to determine the superiority of so many dogs. Still there are various reasons which combine to render it imperfect: in the first place, a course may prove long or short according to the good or bad qualities of a hare; and the ground at one moment may be open for miles, which presently after shall be occasionally intercepted with cover; so that the winning dog of a very long and unsuccessful course will stand a poor chance of rivaling him whose endeavours may have been not only less severely, but more fortunately exerted. This might indeed be prevented, or at least in some measure remedied, by never suffering two dogs to be slipped at a hare but which was found in her form; and in a country as little liable to interruption from cover as could be conveniently selected; and if any doubt still prevailed, a hare in this case might be allowed as much law as is consistent with propriety.

Formerly the speed of greyhounds was tried by running them at deer, which were provoked to take a certain line by a species of slow lurcher; at a particular spot was fixed the goal or winning post, and the first dog which passed this obtained the prize; but the method was so tame, and so decidedly hostile to all ideas of correct sporting, that it has long been consigned to that oblivion so justly its due, and at present scarcely lives within the remembrance of a single individual. There is a sad absurdity in thus seducing any animal from his proper sphere of action, and I do not see how it is to be reconciled either on the score of singularity or amusement: we all know what an animal is capable of being taught; but, I think, that unless absolute necessity compels the experiment, it were much better to avoid such an extravagant display of unnatural propensities

(To be continued in our next.)

**SINGULAR UNANIMITY.**—Dr. Buckland and his brother savans have been unanimous in one thing about the potato, which was, that the first thing requisite to save it was instantly to "remove the peel." Russell and his party, in their desire to save England, seem to have been impressed with precisely the same necessity.—*Punch*.

## ON THE CHOICE AND DUTIES OF GROOMS.

"From what I have said, Sancho, thou art to draw this inference, that there is a necessity for maintaining some distinction between the master and his man, the gentleman and his servant, and the Knight and his Squire; wherefore, from this day forward we are to be treated with more respect and less provocation; for if ever I am incensed by you again, in any shape whatever, the pitcher will pay for all."—*Don Quixote*.

A gentleman is known as well by his servants as by his associates: I do not mean to say that the richness or the smartness of the liveries proclaim them, but that gentlemen's servants have a certain manner that common servants are without. Nor is this manner confined to the upper servants: a respectful demeanour pervades the whole establishment. Take the servants attendant on a pack of fox-hounds: how different are my lord's from the huntsman down to the helper, to the Tom and Jerry sort of fellows with a scrambling town hunt. My Lord's servants take off their caps as the field come up; the scambler grins a familiar grin. This paper I mean to devote to the consideration of stable servants, their choice, their duties, their dress, their delinquencies, &c.

First, of the groom.—A groom, in my acceptance of the term, is a sort of cross between the dignified stable strutter, who does nothing, and the helper. In short, my groom is to be a man that can either dress a horse or ride behind his master as occasion may require: a helper is a sort of fallen angel from the heaven of servitude: they are grooms out of place: what is said of a groom will therefore apply to them. Some people, bachelors particularly, require their grooms to have a touch of the valet in them as well: others require them to be able to wait at table also: these are called "tea-kettle grooms." A servant who can and will do anything is a very useful being, and a good one is a treasure: the difficulty is to prevent their getting spoiled—servants are so apt to mislead each other, one declaring he wouldn't do this, another "he wouldn't do that," until a good but soft man fairly gets his head turned, which generally ends in his being turned off bodily. The plausible arguments of supporting the rights of "their order" draw many to acts they would never think of unprompted.

That amusing fellow Sam Slick has some capital hits at English servants. His first is at a footman, who went swaggering along, and drew forth the following observations:—

"That," said Mr. Slick, "is what I call a rael 'English gentleman' now. He lives in a grand house, is well clad, well fed; lots of lush to drink, devilish little to do, and no care about corn-laws, free-trade, blowed-up bankers, ran-away lawyers, smashed-down tenants, nor nothin.' The mistress is kind to him, 'cause he is the son of her old nurse; and the master is kind to him, 'cause his father and grandfather lived with his father and grandfather; and the boys are kind to him, 'cause he always takes their part; and the maids are kind to him, 'cause he is a plucky handsome feller (and women always like handsome men, and impudent men, though they vow they don't); and the butler likes him, 'cause he can drink like a gentleman and never get drunk. His master has to attend certain hours in the House of Lords: he has to attend certain hours in his master's house. There ain't much difference, is there? His master loses his place if the ministry goes out; but he holds on to his'n all the same. Which has the best of that?"

"The only difference is, his master calls the castle my house; he calls it our castle: his master says my park, and he says our park. It is more dignified to say the plural: Kings always do; it's a royal phrase, and he has the advantage here. He is the fust commoner of England too. The servants' hall is the House of Commons. It has its rights and privileges, and is plucky jealous of them too. Let his master give any of them an order out of his line, and see how soon he votes it a breach of privilege. Let him order the coachman, as the horses are seldom used, to put them to the roller and roll the lawn: 'I can't do it, Sir; I couldn't stand it; I should never hear the last of it; I should be called the rollin coachman.'—The master laughs; he knows prerogative is a dangerous ground, that an Englishman values Magna Charta, and says, 'Very well, tell farmer Hodge to do it.'

"If a vine that hides part of the gable of a coach-house busts its bondage, and falls trailin on the ground, he says, 'John, you have nothin to do; it wouldn't hurt you, when you see such a thing as this loose, to nail it up. You see I often do such things myself; I am not above it.'—Ah! it may do for you, sir; you can do it if you like, but I can't; I should lose caste; I should be called the gardener-coachman.'—'Well, well; you are a blockhead; never mind.'

But to the groom.

A groom is a character of easy personification. The outline, and what theatrical people call the "properties," are easily acquired: a close-poll'd head, diamond tied neckcloth, brown cut-away, step-collared waistcoat, tops and cords, with a copy of Taplin, or some of the old drenchers, and they think themselves perfect. Beware the man with the book!

A pressed groom is to the stable what an architect is to the house—a sort of highly-paid person, who prevents your doing as you like with your own. Now there is something very pleasant in having one's own way, and if one does lose that privilege, at all events it does not do to pay a man for depriving one of it. Horses are articles

of present enjoyment; most people hope to survive their whole studs; and as any particular system, or any particular style of horse, or any particular deck, entails no inconvenience on posterity—as an unsightly, ill-proportioned, or ill-placed house does—it seems very stupid for people to place themselves in the hands of dictators who will hear of no will but their own.

I have always thought the following the perfection of impudence in a groom. It is one of Nimrod's stories of Tom Penn, pad-boy to the late Sir Watkin Williams Wynn, who, Nimrod justly says, "was the coolest subject to his superiors that ever wore a livery"—indeed that he was Sir Watkin's master, as I think the story shews. "Travelling," says Nimrod, "one day with a brother sportsman (the Hon. Phillip Pierrepont), he passed his stable in Oxfordshire. 'We shall see the horses,' said Pierrepont. 'Of course,' said Sir Watkin; 'and they are worth seeing.' But if I recollect right, Xerxes said, 'sail,' but Zephyrus said 'no,' and Tom Penn said 'ne,' and after the following fashion too. 'Well, Tom,' said the Baronet, after alighting from his carriage, 'how are the horses?'—'The horses are well enough, Sir Watkin, but I am very ill.'—'What ails you?'—'Damnationest pain I ever had in my side.'—'I should like to see the horses.'—'You can't; they have been shut up these two hours.'—The Baronet and his friend re-entered the drag and pursued their journey." The best of the joke was, that Nimrod justified Tom Penn, thought he was right, and then drew a lamentable picture of the cruelty of disturbing a poor animal the day after a run over the deepest part of the Bicester Vale, when banged, bruised, and sore, he was mustering courage to lie down, and says, "we must all come to the same conclusion, that Tom Penn was right, and his master wrong."

But then for the purpose of making Tom right and his master wrong, Nimrod has recourse to a fictitious argument. He supposes what had not happened. If they had had a desperate run the day before, Sir Watkin would most likely have known it, being the rider of the horse, and could judge of the propriety of seeing it on the rest as well as his groom could; and even supposing that one horse was distressed, where was the reason that they should not see the fresh ones? Moreover it seems the parties were "travelling," so the chances are there was neither hurt nor distress in the case. The story is a good one as a story, but, told in sober earnestness, is mischievous, being apt to put impudent ideas into the heads of parties who have no occasion to be furnished that way.

The first glance at a groom or a horse generally goes a long way in settling their business. There are some people and some horses that it is worse than useless giving oneself any trouble about after a glance. A great strapping six-foot fellow, for instance—who would be at the trouble of talking to him? The only thing is to bow him out with as few words as possible, and there are none more potent than saying "you have suited yourself." I have known fellows try to argue one into taking them, until stopped by that valuable clincher. He then goes away, and tells the next person he applies to, that Mr. So-and-so would have taken him, "only he had just engaged a servant." A groom should be little: five-foot eight inches is as high as they should be. Lord Fitzhardinge's stud-groom, Smith, stands six feet three, but then he is a stud one, and has charge of forty or fifty horses—nothing of the "tea kettle order" there.

Some parties—and a very good plan it is—make it a rule never to look at a horse that is fagged: they don't fit them for use, and they want to see them as they will be in use. If masters and mistresses would adopt a somewhat similar rule, and insist upon servants appearing before them in the costume of the situation they are applying for—footmen as footmen, coachmen as coachmen, grooms as grooms—it would be a wonderful saving of trouble and disappointment. Servants have established a sort of absurd etiquette among themselves, which forbids their appearing as candidates for a new situation in the liveries or clothes of the place they are leaving. The consequence is, they make the most perfect "guys" of themselves; and in London, where servants are not known as they are in the country, it is the most difficult thing to speculate on what they will be like when they are dressed that it is possible to conceive.

It is very difficult to hit the *juste milieu* with these men—to get them with sufficient strength and substance to strap a horse properly, and yet not too heavy for riding. This difficulty is increased also by the quantity of clothes grooms generally wear, most of them seeming to think it necessary to carry all they have on their backs: it is almost as necessary to strip them as it is to strip a horse to see what they really are. On presenting themselves for inspection, they sometimes further bewilder one, by appearing in a sort of mufti composed of the mixed costume of the groom and butler, or groom and valet. Nothing indeed can be more absurd than the whole system of negotiation for service generally. First comes a letter, written in a fine flowing hand, that induces the recipient to suppose that the applicant is a scholar as well as a servant (this letter being generally the production of the schoolmaster, agent, or lady's maid): then comes the party applying rigged out in the very contrary costume to what he would have to wear; and perhaps, after half an hour's bartering and dialogue, when you are just beginning to deal, he upsets the whole proceeding by observing incidentally that he is a married man.

Supposing, however, size and situation seem right, let us proceed to the other requisites, for we are a long way off hiring yet. A good countenance is a *sine qua non* with a stable servant. When we reflect how much horses are at the mercy of their attendants, we cannot be too particular in having servants good-tempered. Many horses are ruined by their brutality. If a groom takes a dislike to a horse, it is wonderful what tricks they have recourse to run them down. It is a bad plan for a master to consult his groom as to the merits of his horses: the master ought to know what they are as well, if not better, than the groom. Besides, one always hesitates about taking advice where the adviser has a direct interest in the question. The absurd custom of feeling grooms and coachmen on each deal will keep an unscrupulous fellow on a continual look out for faults. A fault-finder is a detestable animal. One cannot go into a stable with a fellow of that sort at one's heels with any sort of comfort: it is a continued grumble from stall to stall. A good countenance, though a decided requisite, is, as we all know, by no means an infallible criterion of goodness. Two of the most atrocious characters I ever met, both murderers, and one something more, had as good countenances as ever I looked at. Still I would never hire a bad-countenanced servant; neither would I hire a sulky-mannered fellow. Some men take their orders much more pleasantly than others, and that perhaps is as good an indication of good temper as a good countenance. Where there are brains and a good disposition to work upon, a good master will generally make a good servant: but then a master must have brains too, and must not be always fretting and fuming, ordering and counter-ordering, as if for the mere object of showing his authority.

A good countenance of course includes the appearances of health and sobriety. An unhealthy man is worse than nobody, and the same drunken man ought never to be seen twice on the premises. Unfortunately drink does not tell on the face so soon as one could wish, and some fellows will muddle on for years without, perhaps, ever being in such a state as to enable a master to say "you are drunk." And here let me caution masters not to say more than that. No man ever admits himself to be drunk at the time; but let the master fix the charge upon him then, in the presence of another servant, if possible, and rely upon it the truth will come out either that day or the next. If he is drunk, the other servants will not attempt to justify him, and a summary dismissal will not only be admitted to be strict justice, but will have a very beneficial effect upon the master's own and other establishments. Of course there are times when a master would overlook an appearance of that sort; but those times should be when the servant has leave out, and not when he is liable to be called upon at any moment on his master's service.

Tippling at exercise is one of the great vices of grooms, especially in the country. A ride to such a public-house and back makes nice exercising distance, and a dram or two corrects the sharpness of the morning air, and horses and men come home all the quicker for them. Gentlemen, when riding about home, should always give their horses their heads when they come near a public-house, and see whether they will make for them or not. If they do, the master can easily feign an excuse, and, after beating about the bush, may ask if they have a warm stable that the grooms put up in when they come to exercise, or if they leave their horses standing at the door? A woman will be almost sure to say they put them up, thinking that will be all right, and that she is protecting her customers. Dram-drinking on the way to covert is very common. I have seen a whole file of fellows pull up more than once on a ten mile ride.

Drink makes some fellows mad: they neither know nor care what they do—a pretty state for a fellow to be in with the charge of a couple of hundred-guinea horses, and master in bed! One of the most vexatious things about a drunken servant is, that everybody knows he is a drunkard except yourself. When at length you discover it, all the country could have told you so, most likely with the addition that he had been turned out of half a dozen other places for the same vice.

Perhaps drunkenness ought to have come under the catalogue of "Delinquencies," with which I purpose closing, but it is so blended with "countenance" as to be hardly separable.

A fine flowing-haired fellow, with his hair hanging about his ears, and nicely parted down the middle, should be viewed with suspicion. He will most likely be too busy arranging his own hair to have much time to spare for the horse's. Besides, a groom with long hair looks nasty: they should all be clipped.

If I had the opportunity, when hiring a groom I would take him into the stable and bid him do a few things. Men on their preferment are generally civil enough, but still there is a something between a really respectful servant and a respectful one "for this time only," as the play bills say, which a practised eye can easily detect. Asking questions is an unfavourable sign; servants come to be asked questions, not to ask them. Calling their late master by his name without the addition of "Mister" would be fatal in my view: there is no truer sign of a low-lived ill-conditioned servant than that. Supposing nose, manner, and appearance, however, to be favourable, I should then conduct the candidate to the stable. First of all, however, after his nose, I should note his demeanour. I would then bid him put a bridle on. If he drew the choke-band tight, I would bid him good morning. I would give him a

horse that had just come in from hunting, or off a journey, and see how he treated him: if he whipped off the saddle immediately, I would say no more to him. If he thought to curry favour by scuttling and hurrying about, shewing how quick he could be, I would have nothing to do with him. Hurry does not do with horses. I like to see a fellow strip as if he meant to work, and go soberly and systematically to work, as if he had a job in hand and knew it, and not as if he were emulating harlequin in the rapidity of his movements. It is extraordinary how much sooner one man will get through the same work than another, and that without apparent effort or fatigue. I should next like to see my candidate ride a horse: if he took all the reins in a bunch, or selected the curb in preference to the snaffle, as nine-tenths of them do, I should be shy of him. I do not say I would reject him on that account, for it is the failing of the fraternity.

(To be continued.)

## The Sportsman's Magazine.

### Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

— BY SOOTHSAYER.

(Continued from page 543.)

At BASINGSTOKE, Sept. 29, Teresa (150l.) won the Town Stakes. The Hackwood fell to Beggar Girl (100l.) Sylvanus won two races here; Nora Creina, one; and Beggar Girl another, after she had changed hands.

At NOTTINGHAM, Sept. 29, Mr. E. Peel's Frances beat The Nobbler and a colt by Giovanni easily for the Noblemen and Gentlemen's Plate. The Two year old Stakes were won cleverly, carrying 8st 7lb, by Inglewood beating colt by Don John, out of Game Lass, over nearly a mile. Pedometer won the Chesterfield Handicap, after a good race, beating Lord Saltoun (1st more) and Yellow Boy. The County Members Plate was won by Idolatry. Pedometer again defeated Lord Saltoun, the only two, and won the 100 sov. Cup. For the Clifton Stakes, hunters and h. b., Isabel, Capt. Bell, beat Veluti, Modesty, Pedlar and two others. Inheritress won both heats, two miles each, for the Queen's 100 guineas, beating Valerian, Aurungzebe, and Idolatry.

At KELSO, Sept. 30, the Cure was beaten for the Roxburgh Gold Cup, by Pilot, first; Lightning, second. Pilot also won the Maiden Plate and the Cure had a victory over Dog Billy for the Challenge Whip, 10 sovs each, and 50 added. A bay colt called Whinstone ran well here, beating Badinage, Dog Billy, and Fousin, for a Sweepstakes, and The Shadow and Pythia, over four miles for the Queen's Hundred. Pythia beat Mid Lothian for the Caledonian Cup. Three two years old started for the Beaumont Stakes, and were carried off by the Peri Colt, beating Brother to Sir Henry and the Leader. For the Border Racing Stakes, Mildens, 5st 9lb, was first; Annandale, second; the Cure, third; and poor old Aristotle brought out again last. For a Plate of 50 sov., one mile, Badinage, a three years old filly, beat some good ones, including Northumberland and the Netherthorn Maid. For the Hunters Stakes Waverley beat Man Friday and several others. In a subsequent match, however, Man Friday (Mr. Johnstone) beat Waverley (Mr. Dawson) easily.

At WREXHAM, Sept. 30, for the Champagne Stakes, 6 subs., Mr. Hill's Sister to Auckland beat Sharpshooter, both two years old; I have heard the latter spoken of for the coming Derby, but am inclined to think he is not the colt Mr. Mostyn depends on. Roderick beat Dean Swift for the Wynnstey Stakes. Sweetmeat walked over for two races. Dr. Husband won a good Handicap and the Gold Cup; for which latter, Falstaff ran, entered as I believe by the present Marquess of Westminster. The Persian Lady beat Alvanley and Brunel for the Selling Stakes.

The PRESTON RACES afforded very little sport, in fact the Borough Cup did not fill and among the lot there a mare called Deuce Ace and the Valencia filly are only to be named.

I will now try my hand on the NEWMARKET First October, a meeting not so interesting as those which follow, and yet possessing features which claim our attention.

For the Trial Stakes, Sept. 30, Oakley beat energy and the Beiram filly; the last quite out of the race. For the Hopeful Stakes, so fond were the backers of her Goodwood running, Cuckoo had 9 to 4 on her; but, to the great joy of the fielders, Madcap, in a half mile race, beat her and Chamolis easily. For the Grand Duke Michael Stakes, although Adrianople, the Cobweb Colt, Worthless, and Sister to Ma Mie started as well, there can be no doubt the race was between the colt by Jerry out of Turquoise and Idas from the beginning. As Col. Peel's Cobweb Colt was in the race, Idas, of course, had not Nat on his back; or, in my

opinion, he would have won the race; as it was he was beaten on the post by a head: Nat, on the Cobweb, a couple of lengths from second. Samphire won the Buckenham Stakes, two years old, by a head; beating Wit's End and Lord Exeter's Mecca Colt. Collingwood (d.) beat Prologue after a fast race by a head; I am inclined to think Prologue was out of sorts. Chandelier, mentioned before, beat Deer Chase and Nell Cook, after a dead heat between the two first; the other did nothing. For the St. Leger Stakes the Turquoise Colt beat Refraction by five lengths, and Attorney. The Town Plate fell to Longitude, beating Foremast and Hawkesbury. Green Pea beat Buttriss by a neck, the Duke of Rutland's Slane Colt, and Pretender for the Rutland Stakes; Nat rode Green Pea. Nell Cook won a 5 sov. Sweepstakes, beating Astern and Zahra. Idas, rode by Nat, beat Prologue, Faultras, and Maynooth for a 50 sov. Sweepstakes. Collingwood, in a match, won again, in spite of the 6 to 4 on Capt. Phœbus. Boarding School Miss beat Event, Longitude, and Prairie for the Queen's Plate. The weather was most delightful.

### TO CORRESPONDENTS.

SIMON PURE.—"Lammas," of Sheffield, is Thomas Birkhill; why ask such a question? He beat Manks (the Warwickshire Antelope) at Sheffield, for a Cup, at the end of last year. Take in "Bell's Life," you will there see a "Chronology of Pedestrianism," if you can't afford it, get a look at the paper. It is accessible in every Sporting house.

C. S. Stepney.—Look at our Almanac, it contains the whole of the nominations for Derby, Oaks, and St. Leger in alphabetical order.

SOOTHSAYER.—Our best, our warmest thanks.—Punctuality, care, exactitude, and talent are rarely combined. Where they are so, the blending must command acknowledgment. A repetition, in print, would be worse than *crambe decies repetita*.

W. B.—Really we have, and that the occurrence is not more frequent is a source of regret, to thank you for your suggestion. We have, however, printed 10,000 bills: announcing the present, and as to your question, of the nature of the publication, can only answer—read it. We know no more of it at this present writing than you do.

T. W. G.—This paper is published on Thursday; the Stamped edition is also issued on that day, in time for post. The back numbers may be had at 42, Holywell Street. The question as to your fowls is one that can only be proved by trial—the fact of the cock not having been seen to tread any of his scenglio, is a poor criterion of the proof of the negative.—You can't be always sure to the matters. For the "anything" as you describe it, excuse us for observing that in nine cases out of ten it is the result of some error in diet, or management of the animal in a domesticated state. Regimen, (and by that we mean careful feeding and housing,) will do more for poultry than any medical attempts. Variation of temperature produces the Roup, and that we take it is what you mean. Give the birds scalded bean or pollard, and separate them from the rest, for it is infectious, like glanders in the horse, if the discharge becomes fetid. We could give you a score of recipes, but they are all, and we have tried them, enormous quackeries. Keep the animal warm and with skimmed milk, a little port-liquor, and in the extreme cases, a dose of sulphur, you will not go far astray.

T. S. B.—Why ask us such a question of an untried man? There is enough of him; but by consulting our Stamped Edition (the contents of which, though this will appear in it, we do not yet know) you may judge of his capabilities. Burton's game is tried; his skill, or that of his lengthy opponent, is yet an unsolved problem; but with these remarks (in our later impression) you will see the question solved.

GREENWICH.—Try the following:—

Tartar emetic.....	.....	12 grains
Opium .....	.....	6 grains
Camphor .....	.....	2 drachms

mix, and divide into six balls; give the dog one fasting each morning. And don't forget a weak solution of sulphate of copper, to sponge the part affected. Show any druggist or doctor this, and he will set you right. Try this before you resort to mercurial alteratives; they don't act with certainty on the canine race.

BOB.—Tom Thumb was matched to do his 100 miles on Sunbury Common in ten hours and a half; he did it in ten hours. Tom Thumb was never matched to do ten English miles in thirty minutes in England; but he has done the distance in the time.

W. ROBERTS, Leeds.—If a horse is sold without a warranty, the buyer runs all risk; if with a warranty the seller, subject to the proofs that the unsoundness existed before the sale.

R. and A.—Her Majesty, with Prince Albert, visited Epsom on the Derby day, 1840.

S. N. has no right to shoot his neighbour's pigeons if they alight on the roof of his house, and if he does must pay for them. If the pigeons do any damage, he has his remedy.

H. F. B.—Can snipes and wild-ducks be shot without a licence?—The former cannot, but the latter may.

NO TURFMAN.—"Trotting match weight for inches" (give and take). The mare standing 14 hands one inch, and three years, must carry 9st. 12lb. 4oz.; and the one of 13 hands 2 inches, 8st.

S. M.—A bets B 2 to 1 that a length of twenty-four feet has not been jumped in one running jump by a pedestrian. A loses, for Ireland jumped more than twenty-four feet in one running jump.

### OUR WEEKLY CALENDAR.

SUNDAY, JAN. 25th.—THIRD SUNDAY AFTER TRINITY.

MONDAY, 26th.—East and Temperance's man, walk 20 miles for £30. a side.—WINE MEASURE.—Two glasses make a man lively, half a pint makes a man merry, one pint makes a man comfortable, one bottle makes a man duddled, one bottle and a half makes a man drunk. Three bottles a day make one sot.

TUESDAY, 27th.—Duke of Sussex born, 1773.

WEDNESDAY, 28th.—Everley Coursing Meeting; Glossop ditto.—Cheshunt Steeplechase.

THURSDAY, 29th.—Brixworth Steeplechase.—Clydesdale Coursing Meeting.—George III. died in the 60th year of his reign.

FRIDAY, 30th.—Maxfield and Barlow's Race, at Doncaster, for £75. a side.—King Charles beheaded, 1649.

SATURDAY, 31st.—Hilary Term ends.—Frost and others transported, 1840.

### THE MOON IN JANUARY.

First Quarter, 4th .. .. .	2 25 morn.
Full Moon, 12th .. .. .	2 1 morn.
Last Quarter, 20th .. .. .	3 51 morn.
New Moon, 28th .. .. .	9 23 after.

## FOX-HUNTING.—SCENE IV.—FULL CRY.

OW shall we show sly, fleet, hard-biting, cunning "Charley" at speed, away from his pursuers, and fair in view? Let the pencil do what the pen cannot, and appealing to the mind through the eye, trace in limned thought convey what words must fail in.

"For I love a fox the cover to find,  
Who'll fly for his life in a sou'-west wind,  
Leaving shirkers and skitters miles behind  
Since the Tally-ho! in the morning."

"That's the time o'day! Yoick! Have on him and at him, my lads, and get all hands to the fore! Never mind, sir—never mind—few fragments and no fractures. A little wetting or waiting never did a man much harm yet; and if the chesnut is in a bit of a hurry, why sure we'll drop you a line as to where you may hit on him in the course of a week or so!"

"Here we are again" at last, with a touch of the brush at the brush, if he don't yet disappoint us—this is foxhunting the best sport of all, though placed at the end of all. Here have we been running on from October with race-horses, brood-mares, pheasant-shooting, snipe-shooting, and other subjects strong in variety, flattering ourselves all along that we kept introducing each at the most appropriate period; and there has been that king of fine fellows and fine sportsmen, the fox-hunter rough and ready, fretting and fuming away at our self-complacency and his neglect; expecting and disappointed from month to month—opening on stag-hunting, deer-hunting, duck-hunting, &c., &c., until at length, his patience fairly failing him, out it comes "hot and strong;"—"Why, d—n the thick-headed knave! I suppose he never heard of such a thing as foxhunting?"

"Bless the sweet-tempered, dear, handsome gentleman," as the copper-coloured gipsy observes to the irascible, bottled-nosed old swell, who, resisting all the temptations of fine dashing ladies, with finer fortunes, has just sworn he'll let the dogs loose if she don't leave the premises that moment; "Bless his lovely, good-humoured countenance! he'd never go to hurt a poor soul as wishes him and his the best of luck at all times!" Now, we can clearly prove, friend Rough-and-Ready, that we are not copper-coloured—as, also, alas! beyond all doubt, that we are not conjurers; but then, perhaps, we do deal in fine promises and long yarns—and as most assuredly we wish you—bless that good-natured countenance!—the best of luck at all times! you'll not go to be dangerous, but suffer us to nick in this "clipping" affair, till the first fence that acts as a floorer pleases you to ride over or on us.

Well, many blessings on the man, whoever he was, [that invented fox-hunting; For, when we do get thoroughly warm, what a glory of joy

and blaze of triumph we share in! How it occupies every movement of mind and body, and banishes all but the very action of the minute! We came out this morning, we will own, crammed up to the eyes with nothing but hints, thoughts, rules and letters on riding to hounds; and yet for this last twenty minutes have been fighting our way over impassable doubles, smashing the top-rails of impracticable timber, and clearing unapproachable brooks, with no more idea, care, or thought of that we had been studying—of feeling our horse's mouth with a fine finger 'at the in and out—of giving the lift of hand and heel at the moment required and described at page one hundred and fifty-three—applying a strong determined stroke of the whip at the rising point, or anything of that sort, than we have of fulfilling scientific directions for rising higher and higher in the balloon of Mr. James Green, or for sinking lower and lower in the diving-bell of any other Green.—It came all naturally, no doubt, but only mind what we say—we are half-mad at the time, we confess, but then it's the madness of ecstasy and experience.—If you will and can start from the cover-side to ride a run as quiet, cool, and collected, with as much jealousy and business in the matter as if you were just off for the Cesarewitch, with two hundred down if you won, or risking your neck in one of the "Grand Nationals" on the usual terms of "half the horse and three parts of the stake," why of course you may make every act an exploit, and every move a bit of fine science full of study, labour, and danger. On the other hand, if you feel the real heart and enthusiasm of a sportsman (of a fox-hunter that is) within you, how every care, cross-purpose, and inconvenience bows down to the Goddess of the Chase! How gates as high and as black-looking as those before Apsley House, content themselves with reasonable proportions at your charge!—how walls, of which human eye never before saw the top, accommodate their altitude to your capability, with a politeness equalled only by Astley's paste-board particulars! And how licks on the head from the boughs of trees, double and treble knocks on the knees from hard-hearted posts, or pokes in the ribs from Pegasus in his efforts to be first up again, come like the fan of the butterfly's wing; or, to use Mr. Maxwell's favourite metaphor, "as light as the thistle-down!" Thrice happy the man who can own to all this—who never thinks, feels, or finds out his own ill till the fox has felt his last, and do all with Nature alone for his guide, without the aid or inducement of beer, brandy, or the eyes of England upon him!

TO STOP THE BLEEDING OF A LEACH OR A CUT.—A correspondent says that the following has been known to succeed when everything else has failed. It will stop a dangerous bleeding in a few moments. Take the thin inside skin of an egg and lay it on the part; it must be fresh or it will not adhere to the skin.—ESCAPAPIUS.

# THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD V. 1811—1827.

**I**N commencing the Fifth Period of our History, a few words of preface may be necessary. The Fourth Period included such eminent pugilists as appeared subsequent to Jem Belcher, and flourished up to the time of Cribb; the most recent men therein contained are Nosworthy (who fought his first battle in 1808) and Molineux, who first stripped in the P. R. in 1810. The present division will comprise portraits and detailed accounts of the deeds in the roped arena of the following pugilistic phenomena:—

1. Randall	.. .. .	1809	....	1821
2. Turner	.. .. .	1814	....	1824
3. Tom Oliver	.. .. .	1811	....	1834
4. Tom Spring	.. .. .	1814	....	1824
5. Bill Neat	.. .. .	1818	....	1823
6. Josh Hudson	.. .. .	1816	....	1826
7. Dav. Hudson	.. .. .	1818	....	1827
9. Jack Carter	.. .. .	1819	....	1832

These will be the principal memoirs in this section, those comprised in the sixth will be there enumerated.

## CHAPTER I.

### JACK RANDALL—THE NONPAREIL.

**P**ERHAPS the P. R. in its palmiest day never exhibited a more accomplished boxer than Randall. Though claimed, (after his signal successes), by the Hibernian portion of the Ring press, it appears that his birth place was the now desolated Holy Land, and that the month of November, 1794, first ashored Jack into the semi-darkness of that then-foggy region of smoke, dirt, drabs, and drunkenness.

In the Archery Ground, in the Long Fields, near where now stands Russell-square, was the scene of action whereon the youthful Randall exhibited his youthful prowess. According to the authority of BOXIANA, Young "Snuff," well known in boxing circles, was conquered three times by Randall in the above place; and, at the age of fourteen, he also fought a man of the name of Leonard in this ground, who was a stone heavier than himself, for three-quarters of an hour. Leonard was, at length, so terribly punished, that he was obliged to be led off the field. Size or weight, it seems, rarely operated as any drawback to the exertions of Randall; possessing courage of the first order, his pluck rose superior to the obstacles he had to encounter. Jack was unavoidably involved, in Mary-le-bone-lane, with a man of the name of Henshaw; the latter was not only taller, but had the advantage of three stone in weight. Twenty-five minutes of hard fighting had occurred, when the friends of both parties interfered and made a drawn battle of it. Notwithstanding the great disparagement between the combatants, from the superior style of fighting displayed by Randall, it was thought he must, ultimately, have proved the conqueror.

One Murphy, an Irish labourer, a powerful athletic young man, attacked Randall in Bainbridge-street, St. Giles's; but the latter undismayed by his gigantic appearance, milled Murphy severely in the course of a few rounds. Randall's height was 5 feet 6 inches, his weight 10 stone 6 lb. His appearance when stripped indicated great bodily strength; his shoulders athletic, but inclined to roundness and his frame altogether capable of great exertion, very compact.

The first battle of any note in which Randall was noticed was with Jack, the Butcher, in the Regent's-park, Mary-le-bone. It originated in a dispute respecting some improper conduct in a fight, in which these heroes had acted in the capacity of seconds, and being a point of honour, it was decided instantly. In the course of twenty minutes, the butcher was so completely served out, that Randall was declared the conqueror.

Randall now aspired to obtain higher honours among the pugilistic corps, and, in the same ring in which Scroggins and Eales had contended, at Coombe-wood, on August 26, 1815, he made his debut with Walton, denominated the Twickenham Youth, for a purse of five guineas. Randall astonished the amateurs with the gaiety of his style, and the decisive action he exhibited. Paddington Jones and Whale were his seconds upon this occasion; and, in the short space of ten minutes, the Twickenham Youth, who in other battles had shown some talents for milling, was so peppered, that he left the ring.

After Carter and Robinson had exhibited at Moulseyhurst the first time, Wednesday, April 24, 1816, Randall entered the ring with George Dodd, for a purse of five guineas. It was a well-contested battle, and twenty-five minutes elapsed before victory was decided in favour of our hero. West-Country Dick and Clark were his seconds.

On Wednesday, May 28, 1816, at Coombe-wood, Randall entered the lists with a Jew, denominated "Ugly Borrock," for a subscription purse collected on the ground, of ten guineas, towards producing a second fight. The amateurs were completely astonished at the milling capabilities displayed by Randall; more especially as his condition appeared so meagre and lank, that an opinion was generally entertained Young Paddy must

in the course of a few minutes, be finished by this determined Israelite. But opposite was the result, that Borrock, "ugly" as his index hitherto had been declared, was now, owing to the sudden painting it underwent, not only rendered more "unlikely," but so utterly metamorphosed as scarcely to be recognisable. The decisive qualities of Randall were so conspicuous, as to elicit the unqualified praise of the best judges of scientific pugilism. Randall did not give the Jew a single chance throughout the fight—he one-two'd him with surprising celerity, and flogged him in almost every round. The battle only continued about twelve minutes; Randall was seconded by Tom Oliver and Clark. The abilities of Randall were often the theme of conversation among the amateurs; but, owing to a bad finger, and want of necessary time to generally improve his frame, he was not matched till Thursday, April 3, 1817, when he entered the lists with West-Country Dick, for 25 guineas a-side.

A roped ring was prepared for the occasion, about a mile and a half from Twickenham, on the Common, and numerous vehicles of all sorts were placed round it, forming a most capacious amphitheatre. Several marquees were also erected on the ground, filled with the good things of this life, to render the sports of the day pleasant and attractive to those lads who were well breeched; but such is the uncertain chance of war, that a gentleman who rode into the ring, having all the appearance of an amateur, unfortunately turned out to be a country magistrate. He very politely requested the official characters to remove the ring, and to disperse as soon as possible—a good deal of gammon was tipped to prevail on him to let the manly sports proceed; but he was good-naturedly inflexible, and observed, that he had been upon his horse ever since seven in the morning on the look-out, and that it was morally impossible the battle could take place in the county of Middlesex. This was enough; and, in less than half an hour, not a drag was left behind. Bill Gibbons, Richmond, Harmer, Scroggins, Cribb, &c., repaired to Hayes, followed by a great party of horsemen and carriages, and formed a ring, but this ultimately proved a hoax, to the no small chagrin of thousands. The better informed proceeded to Twickenham, where the subject was argued and determined; and, on the signal being given, the carriage-wheels went round like lightning—the water was crossed in a twinkling—and, on the plains of Moulsey, in Surrey, about two o'clock, Randall entered the ring and threw up his hat, followed by Dick. Paddington Jones and Whale seconded Randall; and Oliver and Clark for Dick. Two to one on Randall. Though both combatants were known to the ring, Randall was considered by far the better fighter. The amateurs were of the first respectability, but not very numerous. A small delay occurred, owing, it is said, to Dick refusing to fight out of a roped ring.

## THE FIGHT.

Round 1. On setting to much caution was observed on both sides to obtain the first advantage; Randall, with great dexterity, put in a sharp fencer. In returning, Dick hit short; some few blows were exchanged in favour of Randall, who fought his way in to a close, and flogged his adversary till both went down. (3 to 1 on Randall, who had drawn Dick's cork.)

2. Paddy, full of fire, immediately took the lead, and nobbed Dick so successfully, that he turned round from his opponent. In closing, as before, he held Dick up, and faced him till he went down. (Loud applause.)

3. Dick set to with much gaiety, and put in a body hit, but he could make no successful impression upon Randall. The latter not only out-fought him, but again flogged him down.

4. The superiority of milling was decidedly on the side of Randall, who drove Dick from him. In closing, Dick went down rather rapidly from the numerous blows he had received in this round, and it was thought a foul blow had been given him; much vociferation took place of "foul—fair," &c.

5. Randall's distances were well measured, and Dick's nob was again in contact with Paddy's fist. At the ropes Dick made an ineffectual struggle to escape from the severe fibbing which Randall was so liberally bestowing upon him. (5 to 1; but no takers.)

6. Randall commenced work after the manner of a hammer-man at a forge, and although Dick kept plunging with his favourite right-handed hits, yet, in closing, Randall held him up with all the tightness of a vice, beating a tattoo upon his mug, till he felt disposed to send him down. (Loud shouting.)

7. The left hand of Dick seemed of no use to him, and his right hand did not perform the severe execution it had displayed on former occasions. Randall, indeed, got away from it with much adroitness. Dick was again flogged down.

8. Randall now satisfied the ring that he must win; he showed himself a complete scientific fighter; he worked well with both hands, and not only hit Dick away from him, but ultimately milled him down.

9. Dick put in a fencer; Randall, in returning, hit short and went round, but recovered himself; in closing, flogged Dick severely at the ropes, and then dropped him in style. (6 to 1 on Randall.)

10. The nob of Dick was fast losing its shape from the severe hammering of Randall, who applied his fist so rapidly on his opponent's mug. In closing both down.

11. A short round, which terminated in favour of Randall, as did also the twelfth, thirteenth, and fourteenth rounds.

15. It seemed as if Dick was endeavouring to effect a change in his favour—he hit Randall on the face, put in a hard blow on his shoulder, and had the best of this round. (Both down.)

16 to 20. Randall seemed rather blown in these rounds, and at times got away from Dick's right hand. In fact, he had not been idle for a moment, and the face of his opponent gave a strong specimen of his capabilities; he was fished down upon every set-to. (5 to 1.)

21. A good deal of sparring occurred before a blow was exchanged, when Randall put in four facers without any return. Both down. (Any odds.)

22. The arm of Randall appeared to have all the activity of a fiddler playing a country dance; his hand was never out of his opponent's face.

23. This round obtained much attention, from its singularity. Dick put in, two severe body hits, but, in closing, Randall fished him severely with his left hand, then changed it with the most apparent ease, and punished Dick down. (Great applause.)

24 to 27. In these rounds the spectators were surprised to see the successful manner that Randall held up Dick with one arm, and punished him with the other. His head was now completely in chancery, his left eye quite puffed up, and he had been down so often, as nearly to get the appellation of "tumble-down Dick!"

28. The battle was fast drawing to a close, and the excellence of Randall was now acknowledged by all. Dick endeavoured to make some desperate hits; but Randall mobbed him at arm's length, with the utmost sang-froid, and, in closing, did as he liked with him.

29 and last. On setting-to, Randall, with much severity, put in a blow on the bread-basket, that not only puffed the wind out of him, but he went down and instantly rolled up like a bale of cloth. Such a blow is rarely witnessed, and seldom fails in having the desired effect. Time was called, and upon Dick's getting up to come to the scratch, he shook hands with Randall, and resigned the contest. Time, thirty-three minutes and a half.

Randall, in the above contest, proved himself a good two-handed hitter, but unusually successful with his left hand. Dick had not the slightest chance. Randall left the ring without a scratch upon his face.

The scientific quality displayed by Harry Holt, in a battle of an hour and a half's duration with Parish, the waterman, and in his more recent conquest of O'Donnel, at Arlington-corner, had much prepossessed the amateurs in his favour; and, notwithstanding the excellence of Randall, it was generally thought that Holt would turn out a worthy competitor. In consequence of this opinion, a match for 25 guineas a side was made between the above pugilists. Considerable interest was felt by the sporting world respecting its decision, which took place at Coombe-warren, on Tuesday, May 20, 1817, in a 24-feet roped ring.

The wet state of the weather in the early part of the morning prevented great numbers of the fancy from quitting the metropolis, and although it was extremely fine contiguous to Coombe-wood, there were not above six hundred persons present, among whom were Col. Berkeley, Capt. Barclay, Mr. Jackson, Gulley, Cribb, Carter, Oliver, Scroggins, Creekey, Ballard, Gibbons, &c. The combatants were nearly alike in weight, both under 11 stones.

It was upon the whole one of the most orderly conducted matches ever witnessed, excepting a slight frolic which occurred between Caleb Baldwin and the keepers of the gate. The latter, not immediately recognising the veteran of the ring, refused his vehicle admittance, without the usual tip; but Caleb, finding arguing the topic would not do—instead of paying them in sterling coin, dealt out another sort of currency, and, although without the Mint impress, it had such an effect upon the Johnny Raws, that the gate flew open, and Caleb rode through in triumph. At a little after one, Holt appeared in the ring, and threw up his hat; Randall immediately followed. Paddington Jones and Whale seconded the latter, and Painter and Clark for Holt.

The usual ceremony of shaking hands being performed, every eye was on the stretch, looking out for the first advantage.—7 to 4 generally on Randall, but 2 to 1 in many instances.

#### THE FIGHT.

Round 1. The combatants had scarcely placed themselves in attitude, when Randall's left hand, with much severity, caught Holt on his mouth. He repeated it as quick as lightning, and was endeavouring to plant a third, but Holt stopped him. Randall again put in another desperate facer; a few blows were exchanged, when Randall went in with his usual sort of hook to fib, but Holt caught hold of his arm, and a sharp struggle took place for the throw. Randall showed the most strength, and Holt was undermost. (3 to 1 upon Randall.)

2. On coming to the scratch, in this very early stage of the fight, Holt's mug showed the painter had been busy. Randall's left hand again successfully mobbed his adversary. Considerable science was now displayed on both sides; Holt stopped many blows in good style, and also planted a sharp blow on Randall's cheek. Several hits were exchanged, but materially to the advantage of Randall, who, in finishing this round of three minutes, caught hold of Holt's ribs in rather a singular manner, and threw him. (3 and 4 to 1 loudly fered upon Randall.)

3. Randall, with the utmost sang froid, again beat the tattoo upon Holt's nob. It was altogether a long round; but the science exhibited by Holt was that of stopping instead of giving, and the spectators were astonished at the little execution he performed. Randall put in upwards of six facers, damaging the peepers of his opponent, and claretting his face all over, and sent him down from a tremendous hit on the side of his head. (5 to 1.)

4. Holt came up to the scratch undismayed, but he had no sooner set-to, when the left hand of Randall dealt out tremendous punishment. It was never out of his opponent's face. Holt, it was now evident, had been deceived respecting the quality of his adversary; yet he contended in the most manly style, and planted so desperate a hit under the left ear of Randall, that the latter bled prodigiously. The science of Randall was pre-eminent; he put

in six facers almost successively; and when Holt, at length, stopped him on this boring suit, he used his right hand with nearly equal success till Holt went down.

To be continued.

## CORRESPONDENCE.

### VORACITY OF THE SOLAN GOOSE.

To the Editor of THE SPORTSMAN'S MAGAZINE.

SIR,—The immense quantities of fish which frequent the wastes of the Hebrides exceed all conception.

The vast multitude of fowls about St. Kilda assure me that fish must be very plentiful there. I will for a moment confine my attention to the consummation made by one single species of the numberless fowls that feed on the herring.

The solan goose is almost insatiably voracious; he flies with great velocity; toils all the day with very little intermission, and digests his food in a very short time. He disdains to eat anything worse than herring or mackerel, unless it be in a very hungry place, which he takes care to avoid or abandon. I take it for granted that there are an hundred thousand of these birds round the rocks of St. Kilda, and this calculation I conceive by far too moderate, as no less than twenty thousand of them are killed yearly, including the young ones. Let us suppose, for the sake of exemplification, they sojourn in these seas for about seven months in the year, and that each of them destroys five herrings in a day, a subsistence by no means adequate to so greedy a creature, unless it were more than half supported by other fishes. Here we have one hundred thousand millions of the finest fishes in the world devoured annually by one single species of the St. Kilda birds.

The most critical time for harpooning the whales in this part is, when they are seen devouring the herrings by great mouthfuls; and each gap they make is constantly filled with fresh supplies, wishing to fly beyond danger, but cannot for the thick bank beyond them, as they stand pent up in locks, by the heavy storm: and the strongest whale dares not pierce through them, seeing he would not move his fins for the immense throng, much less rise to the surface to breathe; therefore the monster is seen behind the herrings, like a horse eating at the face of a hay-rick.

I am, Sir, yours obediently,

ICHTHYOPHAGUS.

Dec. 20, 1845.

### PHYSIOGNOMY OF THE HORSE.

To the Editor of THE SPORTSMAN'S MAGAZINE.

SIR,—“I am but little acquainted” says Lavater “with horses, yet it seems to be indubitable, that there is as great a difference in the physiognomy of horses as in that of men; and the horse deserves to be particularly considered by the physiognomist, because it is one of the animals whose physiognomy, at least, in profile, is so much more prominent, sharp, and characteristic, than that of most other beasts.”

The horse of all animals is that which for largeness of size, unites most proportion and elegance in the parts of his body; for comparing him to those which are immediately above or below him, we shall perceive that the ass is ill made, the head of the lion is too large, the legs of the ox too small, the camel is deformed, and the rhinoceros and elephant too unweildy. There is scarcely any beast has so various, so generally marking, so speaking a countenance as a beautiful horse.

The more accurately we observe horses the more shall we be convinced that a separate treatise of physiognomy might be written upon them.

I have somewhere heard a general remark, that horses are divided into three classes; the swan-necked, stag-necked, and hog-necked. Each of these classes has its peculiar countenance and character, and from the blending of which various others originate.

The heads of the swan-necked are commonly even, the forehead small, and almost flat; the nose extends, arching, from the eyes to the mouth; the nostrils are wide and open; the mouth small; the ears little pointed and projecting; the eyes large and round; the jaw below small, above something broader; the whole body well proportioned; and the horse beautiful.

This kind is cheerful, tractable, and high spirited. They are very sensible of pain, which (when dressing) they sometimes express by the voice. Flattery, greatly excites their joy, and they well express their pride of heart by parading and prancing.

The stag-necked has something in the make of his body much resembling the stag itself. The neck is small, long, and scarcely bowed in the middle. He carries his head high. They are racers and hunters, being particularly adapted for swiftness by the make of the body.

The hog-necked. The neck above and below, is alike broad; the head hanging downward; the middle of the horse is concave, in profile; the eye small and ugly; the nostrils small; the mouth large; the whole body round; and the coat long and rough. These horses are untractable, slow, and vicious; will run the rider against a wall, stone, or tree. When held in, they rear, and endeavour to throw the rider. Blows or coaxing are frequently alike ineffectual; they continue obstinate and restive.

Leaving some of your readers to apply these remarks to the human countenance.

I remain, Sir, your's faithfully,

Hounslow, December, 1845.

EQUES.

## PURGEM SPA; OR, A DAY NEAR A WATERING PLACE.

Having been compelled, by the illness of my wife, to take up my abode at the above celebrated watering place during November and December, months which hitherto I have generally spent amongst the blackthorn fences and grass grounds of Northamptonshire, I have endeavoured to make the best of my sojourn here by becoming a sedulous attendant on the congregations of young and old maids, who nightly assemble to drink tea and talk scandal; and by ordering my horses to be brought over from home, in order to partake of the sport shewn by the Marquess of D——'s hounds, which hunt the neighbouring country.

It is not in the province of your Magazine, Mr. Editor, to celebrate the gaieties of a watering place; my observations on that head shall be forwarded to the Court Journal; suffice it here to state, that the sore eyes, as the fly men call them, are numerous, the old maids affable, the tea tolerable, and the politeness of the master of the ceremonies unbounded.

The day after my horses arrived, the following note was delivered me by the servant of a corpulent friend of mine, who is a great man with the Marquess's hounds.

Dear Sylvan,—I have just got the meets for next week.—On Tuesday the Marquess meets at High Grumbleton.—Will you make a fourth in a fly to cover with self, and old Harry Heavytail and his son?

Yours truly, JOHN STURDY.

I declined the honour of profiting by the imaginary fourth place in the worthy Mr. Sturdy's vehicle, which I conceived would form a very sufficient load for one horse when filled by him and his two friends, especially as the wood at which the hounds met, though only five miles off, was situated on the summit of a steepish hill, and decided, as the distance was so short, on riding my hunter to cover myself, that I might see all that was to be seen from first to last.

At half-past nine the road absolutely swarmed with pedestrians, chimney-sweeps, butchers' boys, nursery-maids, lollipop-venders, establishments for young ladies; in short, all the idle inhabitants of this idle town seemed to have unanimously agreed to rendezvous at the fifth mile-stone, and assist at the anticipated sport at High Grumbleton. The hounds, a noble pack, attended by the huntsman and two whips, duly attired in the livery of the hunt, arrived at the same time as myself, and established themselves in a sheltered corner of a field adjoining the road. I wish I could do justice to all the subsequent arrivals. First of all came an open fly, freighted by six young ladies, who had set out with the intention of seeing how six different Mr. Smiths looked in their red coats. Next to them came a wheelbarrow full of ginger pop and brandy balls, drawn by a blind bull-dog and a Waterloo man with a medal and one leg. Then an old lady with a parasol, in a wheel-chair towed by a brandy-faced two-legged prad, with a red patch with a number on it on his arm. Then came ladies on donkeys, ladies on pillion, and a troop of damsels on very seedy looking hacks, chaperooned by a hairy-faced riding master, to whose care they were intrusted by their fond parents, and who looked, if I am anything of a physiognomist, as if he was disposed to teach one of his tender charges considerably more than her mamma bargained for. Lots of horses of every sort and description arrived, mounted by every species of servant, from the stunted, wide-awake Leicestershire second horseman, to the hawbuck "what looked after a horse and chaise, waited at table, and worked in the garden." Then came the crowd of red, blue, and green coats, more flies and wheel-chairs, and last of all, the noble master of the pack.

"Gracious, how them dogs bark! I'm sure they'll bite the Markiss," quoth the lady with the parasol, as the hounds recognised their noble master, and rushed to greet him. The Marquess transferred himself from his hack to his hunter, nodded coldly to a few second-rate toadies who were skirting about in hopes of a cordial greeting from his sublimity, and proceeded to put the hounds into cover, while the guard of the London True Blue light post coach, which had stopped to put down a few sportsmen it had brought to cover, played the Hunting Chorus in Der Freischutz in the most lively and encouraging manner.

If the Marquess's intention was to catch the fox, I must say it was admirably seconded by the assembled sportsmen, horse and foot. The equestrians carefully surrounded the wood, whilst the pedestrians closed in on their wily antagonist. Various sage remarks were interchanged as to the probable course he would take.

"He's most sure to cross the road for Upton-spiny," observed the brandy-faced gentleman who towed the old lady with the parasol, and who was evidently looking out for a start.

"No, that he won't," was the reply, "cos he'd be most sure to be runned over by them flies, or chays, or summut; there's such a lot on 'em."

"Good God, sir!" cried the cock druggist of the Spa, who had stationed himself with a few of his surviving customers down wind, exactly in the spot from which the fox might be expected to brake, "good God, sir! look at that damned riding master and his troop; they'll spoil all our sport. If we could but keep that point clear, we'd be sure of a run. The fox did come out there just now; but one of Miss Tripe's young ladies shied her ridicule at him, and headed him back." The riding master, I have since ascertained, was at that moment making

precisely the same observation respecting the druggist, *et sic de ceteris*. I must here tell you, Mr. E., that the Marquess has the reputation amongst these gentry of being a very ill-tempered man in the field.

"Hullaballoo, hoo, hoo, hullaballoo!"

"Oh Lord! oh Lord! help me off!"

"What's the matter? Where's the doctor? A man in a fit!"

This horrible yell proceeded from a young farmer who was sitting on his horse next to me. He was lifted from his saddle, and laid on some straw in a corner of the field, whilst some one galloped off for the doctor, it appearing that a grey filly belonging to Mr. Chouse the dealer, which on my way to cover he had strongly recommended to me for my wife, had kicked him severely on the leg. The doctor, a retired practitioner of considerable skill, soon rode up. He is a good sportsman, keeps a couple of capital nags, and rides, as doctors and parsons generally do, "uncommon straight." He dismounted, and with the assistance of a pallid surgeon's apprentice, who had been enjoying the sport from the summit of a neighbouring tree, but had slipped down in the hopes of a job, proceeded to examine the hurt. The patient was most tenderly supported by Mr. Chouse, who, on seeing me, began to express his surprise at the accident, as the mare was the most sweet-temperedest creature breathing, and consoled the poor farmer by assuring him she must have done it in play. The doctor in the mean while cut open the sufferer's boot, the pallid apprentice stripped down the stocking; both bones of the broken limb appeared protruding through the skin.

"Away, away! toot, toot, toot! he's off for the gorse!" shouted the huntsman, as he galloped by with a few couple of hounds at his horse's heels.

"It's a compound fracture, Mr. Pillbox; carry him home on a hurdle," screamed the doctor, scrambling on his horse, and putting him straight at a four-foot wall before he was well in his saddle, he being apparently of opinion that there was no time to be lost, even on a patient.

"She must have done it in play," reiterated Chouse, letting the farmer gently down on his back, and mounting the grey filly.

Off we went down a ride, terminated by a low stone wall, which soon became macadamized by the horses blundering over it.

"For God's sake, get on there!" exclaimed a cobby country gentleman in the rear, who believed himself that he made other people believe that he was a quick man over a country, by being very clamorous at gaps, and riding fast when there was no occasion for so doing, and when every body else was riding slow. Crash went some one over the fence who knew what he was about, and knew better than to stay waiting for his turn at a gap, when hounds were running like devils over the open. —Crash. "Catch my horse!" implored another unfortunate fellow in the ditch, who did not know what he was about, and had endeavoured unsuccessfully to follow the former's good example.

Away, away, went the hounds over the large fields and stiff fences, not a horseman within a mile of them. The nags soon began to shew distress; if the country was light, it was hilly; the riders evidently shied the fences more than at starting, the rag, tag, and bobtail disappeared, and in about five and twenty minutes some eight or ten of us caught the hounds, but not till they had thrown up in the middle of a large grass ground. I did not know the country, so I cannot say whether our course was straight or circular; but I know that I was third man up, and the first person I saw in the lane adjoining the field we were in, was the brandy-faced gentleman and his wheel-chair. He was in considerable distress, but still, there he was. I have since been informed that he is in great request among the sporting ladies of the Spa, from his excellent wind and bottom, and his superior eye to hounds. It is supposed that he can go ten minutes longer than any other chairman in the town, and tow eighteen stone with ease.

The huntsman made a couple of unsuccessful casts, which gave the rest of the company time to straggle in. Each man on his arrival most unblushingly observed, either "that the pace had not been what it ought to have been," or "that he regretted that the hounds should have checked just as his horse was getting settled to his work," although it was pretty evident, notwithstanding the disparaging manner in which these gentlemen were pleased to speak of the run, that a few minutes more would have settled their nags altogether, if heaving flanks and quivering tails were to be received in evidence. Last of all arrived the noble Marquess, considerably out of sorts at not having seen anything of the scurry. He was beginning a long Philippic against skirting, nicking, overriding hounds, &c., &c., when he was cut short by being informed that the fox was most indubitably in a drain. The farmer who gave this information rode off to the nearest house, and pressed into the service a most unfortunate-looking black long-backed tail-less cur, which he inserted into the muddy mouth of the ditch, much to the poor devil's delight. From the infernal row which the hounds made, he could have expected nothing short of being eaten alive. All eyes were now directed to the other end of the field, where Reynard was expected to make his appearance. "There he goes!" hollas some one.—"Hold your tongue, damn you!"—"Holloa, the hounds want blood!"—"Give him law!"—"Let him go!"

The hounds caught sight of him, and away they raced to a large wood a few fields off, which they entered close on his brush. Here the day's sport terminated. The scent grew cold, the Marquess sulky; in vain the

hunterman cheered his hounds, in vain the whips kept a bright look out, master reynard was too sharp for them. He quietly slipped down to the other end of the plantations, and trotted off by a short cut known only to himself and a few inmate friends, to his former quarters on the London-road, *For, et prætera nihil*.

The sportsmen collected into groups, and their talk was of luncheon; the Marquess rallied his toadies around him and departed. Off went one troop of youngsters as hard as they could scamper, over the gates and walls, headed by a man who had undertaken to shew them the shortest way home. The cobby little gentleman, who professed only to ride hard when there was occasion for it, (a very favourite expression, by the way, among timid would-be performers,) muttered something about "unsportsmanlike," and joined a bevy of elderlies who preferred the turnpike. Another class of youths, who were too slow for the larkers and too fast for the elderlies, remained to ride home with the hounds, and talk over the run with Jack Forward and the whips. It was really edifying to see the credulous countenances with which the last-mentioned worthies managed to swallow the enormous lies which these infatuated young men were pleased to tell concerning their own and their horses' feats in the preceding run. Jack and his men had an eye to a glass of brandy and water going home, and a handsome tip at the end of the season, and believed accordingly. From what I myself saw of the run (and I think I saw as much of it as any of them), I should say the old lady in the wheel-chair had decidedly the best of it, from the hard condition of her prad, and from superior knowledge of the country.

As we entered the town on our return, we were met by the whole beauty and fashion of the place; many were the inquiries made after the brush: had the fox been furnished with as many tails as a soldier's cat, or the "Arabian Nights," and had we caught him, they would not have sufficed for a tithe of the young ladies to whom it had been rashly promised. On reaching home I changed my dress, and walked into the town, where I recognized many of the gallant sportsmen with an admiring fair one on each arm, parading up and down the High Walk in their red coats and leathers. I had wondered in the morning what could induce a lot of men who could hardly sit firm on a rocking-horse, and were evidently too much alarmed during the day to enjoy the thing, to ride miles to cover, to get frightened out of their wits and then ride home again. The mystery was now solved; and I have no doubt that the red coats told on the hearts of the susceptible damsels of Pargum Spa, in a degree which amply compensated the wearers for all the wear and tear which their nerves had undergone in the morning.

SYLVAN.

P.S. On my way home I fell in with Mr. Sturdy, whom I had not seen during the run. He informed me that owing to having been furnished with a rascally bad fly horse, he and his friends the Measars. Heavytail had arrived late at the cover side. I'll never deal with that fellow who let us the fly again, said he to himself, it is only five miles after all, and although the road is hilly, there were only us three as you preferred riding, he ought to have done it in an hour.

### THE JUNGLES IN INDIA.

(FROM THE "SUNDAY TIMES.")

[The following graphic account of adventures in pursuit of the chase amongst the jungles of the East will be read by sporting men with considerable interest, and, we have no doubt, will excite amongst many of them a wish that they could have an opportunity of daishing at the same "game." Our correspondent is indebted to R. Gough, Esq., of Killworth Hall, Leicestershire, well known as an active member of the Pychley Hunt, for the communication.]

"Jecunderabad, July 2, 1845.

"My dear—, I was unable to answer your kind letter of March 27, by the last overland mail, having been out for the last two months on a sporting excursion in the jungles. I was out with a young Scotch ensign, and a very good sort of youngster, but as great a griffin in sporting matters as I ever met—in fact, he prevented my killing a great deal more than I did, by his over-anxiety to blaze away right and left at everything and every distance. My bag, however, was not so bad, and is as follows—3 tigers, 11 bears, two neilghy—which is a species of elk, very handsome and scarce, and standing from fourteen to sixteen hands high—eleven elk, three wild bogs, two antelopes, two spotted deer, two bison, and upwards of 200 head of small game, such as hares, partridges, jungle, and wild fowl. It is a better bag than has been made here for some years, and is considered very good for this part of the country, though I dare say if we go up to Maniptee we shall think nothing of it, as I see by the papers that a party, last year, bagged twenty-two tigers in a month there. Then they had elephants to shoot from, whereas all our game was shot on foot. I had rather a narrow escape from one tiger; the beast was creeping after me from behind, when I fortunately saw him just in time, and gave him his quietus within five yards. He was a very small tiger, scarcely larger than a panther, but was a notorious man-eater, and had killed several people a short time before. The other two tigers were shot too hard at first to show fight, and died quietly. We killed no less than 11 bears, nearly all of which showed

good sport. I had rather a narrow escape with one; I wounded him on a hill above me, and he came down like lightning at me; I had no second gun out, and was obliged to stand fire, and trust to my pistols. I waited till he was within a few paces and rose on his hind legs to hug me, when I fired, and fortunately brought him over, or I should have found him rather an awkward customer. We had splendid fun, and though the weather was hot enough to grill a beef-steak, I never enjoyed myself so much. We went in the direction of the Godavery river, some 300 miles from here, shooting right ahead every day in the deepest jungles whenever we heard there was any game to be had.

"The place we went to is said to be the most dangerous spot for fever, but although I was working hard in the sun all day long, and at night always slept under a tree, taking no precautions whatever, I had not so much as a pain in my finger the whole time. Some of our attendants, however, were not so fortunate, and several got an attack of jungle fever, and have not yet recovered. I sent home a box of birds for — on board the ship, City of Sweden, which left Madras on the 23d of May last, and will, I suppose, arrive in England early in September, or late in August. As I did not know who were —'s agent in London I directed it to you, and it is consigned to the care of Messrs. Landen and Co., 17 Jermyn-street, St. James's, London, to whom I have sent the bill of lading. . . . With kindest love to all at dear old Anstey (Warwickshire) believe me ever your most affectionate nephew,

"GEORGE CHETWUDE."

**BLUNDERING LEAPERS.**—A farmer in Essex, well known some years since in Lord Petre's hunt, had an entire horse, a remarkably clever jumper. I often tried to coax him out of the horse at a strong price. "No," he would say, "it is as much as my neck is worth to part with him." The fact was, the farmer was a determined goar in the field, but a much harder one in a public-house; and frequently, when it was so dark the horse could hardly see, and the master not all, he used to start off across the fields home; somehow he stuck on, and the horse went home as straight as a gun-shot. I once saw him take a gate with his master on the saddle and his arms most lovingly round the horse's neck. I told him he would be found some night, horse and all, in some of the Essex ditches. "Nay (says he), there is not a ditch in the country we were not in the first year I had him; he knows them too well now to get in again."

—*Sporting Magazine.*

**THE PERILS OF ELEPHANT HUNTING.**—Major Rogers had just had capital sport with a herd of these animals—his four guns had all been discharged—when an unseen elephant made a charge at him from the skirts of the jungle. There was no help for it except to run, and for one hundred yards the major kept just a-head, feeling at every step the animal's trunk trying to insinuate itself round his loins. A turn round a tree gave him a momentary advantage, which he made the most of by springing up into the branches (he was as nimble as a cat, and as strong as a lion.) One foot higher! and he would have been out of the elephant's reach; but before he had time to draw up his legs, the elephant had got him firmly clenched in the coils of his proboscis. Still Rogers pulled against him, thinking it better to have his leg wrenched from the socket than to fall back bodily in the animal's power. The struggle, however, did not last long, for, to the delight of the pursued and the chagrin of the pursuer, the Wellington boot that the former wore slipped off, extricated the leg, and saved the life of poor Rogers. (Heaven save us from such a boot-jack!) The dilemma, however, did not end here; for the elephant, finding himself balked of his prey, after destroying the boot, took up his quarters beneath the branches, and kept its expected victim in the tree for twenty-four hours, when the tappel, or country postman, happening to pass by, Rogers gave him notice of his position, and on this being intimated to the nearest village, the elephant was frightened away by tom-toms and yellings. Had this occurred in a deserted part of the jungle, poor Rogers would indubitably have been starved to death in the tree.—*Sporting Magazine.*

**CHANGE OF PHRASE.**—The extent of railway surveying has caused a certain popular query to be superseded. Instead of "Has your mother sold her mangle?" the boys in the street now ask, "Has your father sold his theodolite?"—*Punch.*

### THE SPORTSMAN'S DISTRESS.

I've lost my friend, my dog, and wife,  
Sav'd only horse and purse;  
Yet, when I think on human life,  
Thank heaven it is no worse.

My friend was sickly, poor, and old,  
Was peevish, blind, and crippled;  
My wife was ugly and a scold,  
I rather think she tripped.

My dog was faithful, fond, and true,  
In sporting gave me pleasure;  
I shouldn't care for t'other two,  
If I had sav'd this treasure.

T. F.

# ADVERTISEMENTS.

**THE MAMMOTH HORSE. — MR. Carter's** Colossal Horse continues to attract crowds of visitors, but as he will positively leave town in a few days for America, Mr. Carter begs to remind those persons who have not yet seen this remarkable animal, aptly termed the "Model Horse," that the present time is the only opportunity they will have of viewing the largest horse in the world. Count D'Orsay says, "he is a magnificent animal." The Mammoth horse is 20 hands in height, and weighs 2,500lbs. He will be exhibited at the Egyptian Hall, Piccadilly, from 11 a.m. till 9 p.m. Admission, 1s.

**TOM THUMB SONGSTER,**  
Containing Eighty Songs.  
Nos. 1, 2, 3, 4 of this low popular Song Book are still on sale.

No. 6 contains, by permission of Miss Eliza Cook, Thirteen of her best songs, together with Forty other Songs, and a neatly engraved Portrait of this talented Lady.

New Ready, Nos. 1, 2, and 3 of

**THE LONDON GENERAL RECITER,**

Containing some of the best Recitations, Comic and Sentimental Extracts, &c. No. 3 contains Sixty-four Pages of beautiful print, Two Engravings, and a Portrait of Mr. Phelps, as Rolla.

**MIRTH FOR ALL SEASONS.**

New Ready, No. 1 of

**THE UNIVERSAL JESTER,**

Containing sparkling Witticisms, Jokes, Riddles, Puns, Bulls, Jonathanisms, and everything likely to cause right good Merriment. Everybody ought to have this, to create mirth for Holiday Times. Thirty-six pages, a Comic Engraving, beautifully designed Cover, and laughable Frontis piece, the whole for One Penny.

London: Cleave, Shoe Lane, Fleet-street; Purkess, Compton-street; Heywood, Manchester; Guest, Birmingham; France, The Side, Newcastle-on-Tyne. The Trade Supplied.

**WAR WITH AMERICA.**

Now Publishing, in Penny Numbers, Weekly, and Sixpenny Paris, Monthly.

THE MOST POPULAR WORK OF THE DAY.  
On the 30th of October was published, beautifully bound in cloth, gilt and lettered, price Six Shillings and Sixpence Volume 1. of

**THE MYSTERIES OF LONDON,**  
By George W. M. Reynolds,

Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," &c.  
"This magnificent volume contains 494 royal octavo pages, printed in double columns, and embellished with seventy beautiful engravings on wood by the first artists of the day. As a literary production it has been pronounced by the leading newspapers to be one of the best and most extraordinary works ever issued from the press. In a serial form, its sale has amounted to the enormous circulation of forty thousand copies."

London: George Vickers, 3 Catherine-street Strand. Paris: A. and W. Galignani.

**EVERY MAN HIS OWN HARNESS MAKER.**

**THE DURHAM DUCIE HUNTING AND Travelling Knife.**—J. B. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of sportsmen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.

By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

"Windsor Castle, Oct. 4, 1845.

"Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

If any horses should die or be disqualified prior to the draw, the amount will be deducted from the starting money, as above.

N.B. A 10s. 6d. Sweep is expected to fill every month.

**UNDER ROYAL PATRONAGE.**

Perfect Freedom from Coughs in Ten Minutes after use, and a Rapid Cure of Asthma and Consumption, and all Disorders of the Breath and Lungs is insured by

**DR. LOCOCK'S PULMONIC WAFERS.**

The following particulars of Rapid Cure of Asthma, of Fourteen Years' Standing, are from Mr. J. E. Bignell, Holyhead-road, Wednesday, and addressed to Mr. Ladbury, surgeon there:—

Sept. 6th, 1845.

Sir,—When I had the first box of Dr. Locock's Wafers from you, I was labouring under one of those attacks of Asthma, to which I had been subject now for about fourteen years. I have had the best medical advice the neighbourhood could afford, including two physicians at Birmingham, and one at Wolverhampton, but with no success. My breathing was so very difficult, that I expected every inspiration to be my last. As for sleep, that was impossible, and had been so for several weeks.

The first dose (only two small Wafers) gave me great relief—the second more so. In short, the first box laid the groundwork for the cure, which only four boxes has effected and I am now quite well. I remain, Sir, your most obliged,

G. E. BIGNELL.

The particulars of hundreds of Cures may be had from every agent throughout the kingdom and on the Continent. DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

TO SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1d., 2s. 9d., and 11s. per box; or sent free by post for 1s. 3d., 3s., or 11s. 6d., by Dr. SILVA & Co., 1, Bridge-lane, Fleet-street, London. Sold by all Medicine Vendors.

**T. PARISH'S SWEEPS NOW OPEN.** White Horse, Fane-street, Aldersgate-street, City.

**THE EARL OF ALDBOROUGH**

**HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 31st Feb. 1845.

To Professor HOLLOWAY:—

Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment in case of any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout THE CIVILISED WORLD, at the following prices:—1s. 1d., 2s. 9d., 4s. 6d., 11s., 23s., and 33s. each Box. There is a considerable saving by taking the larger sizes. N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 10, BERNERS STREET, OXFORD STREET.

Sold by Strange, Palmerston-row; Hannay and Co., 63, Oxford-street; Gordon, 140, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

**THE CONCENTRATED DETERSIVE ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

The **CARDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; of indigestion, irregularity, weakness, impotency, loss of appetite, indigestion, consumptive habits, and debility arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

**PERRY'S PURIFYING SPECIFIC PILLS,** price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 10, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. On personal visit only is necessary to effect a permanent cure.

At 100, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deansgate, Manchester, on Mondays, Tuesdays, and Wednesdays.

LONDON:—Printed by JOHN WORTHAM, of St. Paul's, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIFPLE.—Thursday Jan. 22, 1846.

JACK RANDALL, THE NONPAREIL.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD V. 1811—1827.

### CHAPTER I.

#### JACK RANDALL.—(Continued.)

5. Randall was compelled to fight extremely different from the mode he had adopted with West-Country Dick. Holt was not to be fibbed; and Randall also convinced the admirers of scientific pugilism, that he is a most effective out-fighter. His hits were tremendous, and Holt's face was completely vermillioned. In this round, notwithstanding the damaged peepers of Holt, he put in so sharp a blow on the bridge of Randall's nose, that pinked his index in an instant. The quickest eye could scarcely keep pace with the execution performed by Randall's left hand in this round, and he repeatedly hit Holt from him till he went down. (All betters and no others accepted.)

6. Randall appeared to suffer much inconvenience from the violent bleeding of his ear; his mouth was so overcharged that he could scarcely get rid of it. Had not Holt possessed excellent science, he must have been smashed in the very outset of the battle. He stopped a great number of blows; but it may be truly said, that he only stood up as a mark to be hit at. It was curious to observe, that, whenever the left hand of Randall was denied, he used his right with great facility, and put in some terrible ribbers. Randall closed this round by a terrible blow in the middle piece, that sent his adversary down in a twinkling. (Ten to one was offered upon Randall.)

7. It was useless for Holt to contend; but his game and courageous nature prompted him, if possible, to rise superior to defeat. It was all up—Randall did as he pleased, and Holt was again down. (Any odds.)

8 and last. Holt was emulous for conquest; the blunt, it seems, he did not value, but the fame of victory was dear to him—nothing else could have induced him again to meet his opponent. Randall worked sharply with both his hands, and with his right planted a tremendous hit on Holt's nob, that instantly felled him. He was beat out of time; but was very anxious to renew the combat. He observed "I am ready to fight;" but, in endeavouring to rise from his second's knee, fell down, from exhaustion. Holt's friends were perfectly satisfied he could not win, and he was instantly carried out of the ring by Parish and Painter, put into a chaise, and proper attention paid to him. The battle lasted 25 minutes.

This contest firmly established Randall's character as a first-rate scientific pugilist. He possesses the mastery of the art in an eminent degree—divests his actions of sameness with the most perfect ease—and promptly changes his mode of fighting as the necessity of the attack requires. In his former battles with Borrock the Jew and West-Country Dick, his superior fibbing traits proved successful,—with Holt a different system was required, and as an out-fighter he completely astonished the ring, at the terrible effective capabilities he exhibited. With his left hand, Randall planted uncounted hits on Holt's face, and several with his right. He threw little time away in sparring—and, like a good artist, his workmanship soon spoke for itself. As a finisher there seemed a great analogy between Randall and the late Dutch Sam, and

as a two-handed hitter, the decisive mode of Tom Belcher. It was urged by the partisans of Holt, that he displayed no fight at all in contending against Randall. This complaint, upon a slight examination, will not only soon be removed, but the assertion proved unjust. Randall was the offensive fighter throughout the battle, and his punishment was so rapid and severe, that he never gave Holt any opportunity of showing himself, except merely on the defensive. The latter, notwithstanding his science, but in very few instances, stopped his opponent's left hand. The true statement of the case is—that "the fight" was hit out of him as early as the third round. In fact, if Holt had not been a truly game man, he could never have stood before Randall for twenty-five minutes, after the heavy milling he received at the onset. In consequence of this opinion being entertained by the few amateurs present, ten pounds were collected for his bravery.

Four months had scarcely elapsed when Randall again appeared in the prize-ring, in competition with Belasco, the Jew; this match produced one of the most interesting battles upon record. Since the boxing days of the scientific Tom Belcher and the renowned Dutch Sam, the amateurs and patrons of pugilism had not been more animatedly interested respecting the termination of any combat than the one which took place on Tuesday, September 30, 1817, at Shepperton-range, in a twenty-four feet ring, for 50 guineas a-side, between these heroes. The milling reputation of both the combatants was of the first order throughout the circles of the fancy. Randall was considered the best finisher of the light weights; the Jews, in Belasco, hoped to find another Dutch Sam—he was the rising star of their pugilistic hemisphere, and an awkward man to get at—a desperate in-fighter—one that would not be denied—and able to rally his opponent to the end of the chapter. Duke's Place was all alive in the praise of the capabilities of Belasco, and, notwithstanding the love of monish by the tribes, it is said, in some instances, the odds were sported on the young promising Israelite. But if Petticoat-lane resounded with the strains of the Children of Judah, on the other hand the back settlements of the Holy Land were equally full of spirits upon the occasion, and from the turf-cutter to the knight of the hood, all sported all their loose bunt from a sovereign down to a glass of whiskey, in honour of their darling Jack Randall. The Corinthians of St. James's too were highly interested upon the event; and the flash side, (as they are termed,) although they sported 5 and 6 to 4 on Randall, did not view it with anything like the safety of receiving a bank dividend. The men appeared in good condition—Belasco weighing a few pounds more than his opponent, and looked uncommonly fresh. The time having arrived, five minutes before one, the combatants commenced the attack. Randall was seconded by Paddington Jones and R. Whale; Belasco was waited upon by Little Fuss and Aby Swartcher.

1. Randall who in all his former battles generally hit first, displayed unusual caution. The same care was manifest in the Jew. It was a complete system of tactics. The spectators were lost in amazement; and their optics were completely tired in watching the feints—viewing the steps—contrasting the manoeuvres, stratagems, and snares resorted to by Randall and Belasco to get the best of each other, until nine minutes had elapsed before the first round was terminated, during which only four blows had been exchanged; in closing, Belasco went down.

2. The same system of generalship occurred, and this round occupied eight minutes and a half. Belasco put in a sharp hit on Randall's mouth, which brought forth the claret in a twinkling. Here the coolness of the Nonpareil was seen to great advantage; his steadiness was as if no blow had been struck. A rally occurred, in which some sharp hits were exchanged, and Randall received rather an unwelcome touch upon his eye. They separated and rallied again, when, in a close, the Jew went down.

3. From this mode of fighting a long battle was anticipated. In this round the knowledge of the art was portrayed on both sides. Randall was rather unfortunate in his distances, for although his left hand bodied his opponent repeatedly, it did not once touch the mark. It was not a *coup de grace*. Belasco down. Twenty-four minutes had elapsed.

4. The conduct of the Jew was much to be admired. He fought like a hero, and followed his opponent with all the confidence of true game. He was however floored, with the celerity of a shot, from a desperate left-handed hit of Randall. The latter put up his hand to his eye as if it was troublesome.

5. It was now clearly seen that Randall was the great Captain; he out-generalled his opponent with all the accomplishment of the art of war. If Randall was bored at any time to a corner of the ring, he fought his way out with such ease and safety, that description falls short in conveying its excellence. It was also curious to observe, that the Jew, at one period, had got Randall in a position to fob him, when the latter, from his tact and courage, not only extricated himself from this perilous situation, but he returned the compliment upon Belasco with unparalleled adroitness, and fished the Jew, till he went down. Two to one upon Randall.

6. A most excellent round in point of science, but Belasco was again floored. 7 and last. Belasco not only appeared a better, but a superior boxer in every respect, than in his contest with Reynolds; and if he could not rank with Randall, proved himself a difficult customer to be served! After some scientific movements, Randall put in such a tremendous hit on Belasco's eye, that the latter instantly put up his hand to feel if it was there—the pain appeared so excruciating, that he staggered, fell, and fainted. Randall might have put in another hit before he went down, but his conduct was too noble to add the slightest punishment to a fallen rival. Upon Belasco's recovering from his trance, he rubbed his body, as if suffering from severe punishment. The battle thus terminated in fifty-four and half minutes.

The most experienced judges of boxing agree, that throughout the Annals of Pugilism such a display of scientific excellence as the above

battle is not to be paralleled. It was a perfect picture of the art and Randall justly acquired the appellation of THE NONPAREIL. His agility is surprising. Dutch Sam, in the best of his days, it was said, never fought with any thing like the precision exhibited by Randall; and, in competition with the latter, the Jew phenomenon must have fallen beneath his superiority. This contest, it is true, did not altogether please, if we are to collect from the crowd who are partial to downright milling, but by the admirers of scientific efforts—by those patrons who value the intent more than the effect—those amateurs who appreciate the advantages of hitting, and getting away, of giving instead of receiving, and of seeing a fight won without ferocity, gluttony, the fight between Randall and Belasco was pronounced one of the most perfect specimens of pugilism ever witnessed. The attitudes of the men were fine in every point of view, and their movements conducted on the true principles of science. The athletic beauty of the human frame was never more prominent. Randall retired from the ring scarcely scratched. This is the grand art of fighting, to give and not to receive!

At a sporting dinner, given to the Lads of the Fancy, at Tom Oliver's, a few days after the above fight, by one of the highest amateurs in the scientific circles, no want of game, it appears, was discovered to render the table complete; and when the cloth was removed, the cigars lighted, the lively glass replenished, and the merits and capabilities of various milling heroes became the animated subject of discussion among the company present, a set-to was proposed, by way of practical illustration, between Randall and young Burke of Woolwich. The heroes immediately acquiesced in this request: the gloves were produced, and the men soon appeared in battle array. Burke, who is five feet ten inches in height, and wanting neither gluttony nor science, contended for the honour of having the best of it with much determination; but some doubts having arisen among the learned judges upon this precise point, a regular glove match was entered into, and a sum deposited on both sides accordingly. The first clean foorer was to decide the event! The contest was truly spirited, and after some tidy milling having occurred, Burke went down; but it not being exactly the thing meant, the point was reserved till another round. Thirteen minutes had now elapsed, and notwithstanding the advantages Burke possessed from standing over Randall, the latter at length measured his distance so correctly, that Burke was floored as if he had been shot! The point being now satisfactorily decided—the glasses went merrily round—mirth and harmony prevailed throughout the evening, and the company separated in the utmost good humour. It is said, that the amateur before alluded to, observed, Randall should not want, if necessary, from 500 to 1000 guineas to complete any match, so high an opinion did he entertain of his milling talents! Randall was presented by his backer with the amount of the stakes.

Randall had made such rapid strides towards perfection in pugilism, that some difficulty was experienced in finding a customer for him. However, the long-talked-of match between the *Parish Waterman* and Randall was at length made for 100 guineas a-side. These boxing heroes met on Thursday, November the 27, 1817, at Hayes-common. Parish, it seems, although not highly appreciated as a boxer, was well-known as a staunch man; he had also acquired first-rate science, under the tuition of George Head, (a teacher of deserved celebrity). Nevertheless, so little was the Waterman esteemed in comparison with his opponent, that three to one was the current betting against him. True, Parish's battle with Holt was highly spoken of, although it took him one hour and a half to win it; while Randall, on the other hand beat Holt in twenty-five minutes. Wallingham-common, in Surrey, about six miles beyond Croydon, was the spot selected for this grand trial of skill. Thither the amateurs repaired at an early hour, but the clergyman of the parish (and also a magistrate) saw the cavalcade pass by his window, and on learning the cause hastened to the ring, and declared the battle must not take place in Surrey. A little persuasion (or what some of the fancy might term gammon) was tried to divert the Rev. Gent. from his intention,—but he observed, "it was loss of time to remonstrate, as he was as inflexible as a rock."—In this dilemma, Hayes-common, in Kent, about seven miles distant, was suggested as an eligible place. The stakes were instantly removed, and the motley group followed like lightning, over a cross-country road, that had not been visited for months by anything but dung-carts or waggons. It was almost impassable, but the game of the Fancy was not to be beaten by trifling obstacles, and the scene that followed beggars description. Postchaises were floored in the high runs in the road—the springs of surrises and gigs were broken—the *Reinantes* dead beat—the Estonsers puffing and blowing from top to toe, anxious to arrive in time—shoes were dragged off the feet by the strength of the clay, and many of the light-shod coves stuck fast in the mud. The magistrate, very politely, saw the patrons of science to the extremity of the county before he took his leave. At length, Hayes-common appeared in sight, and the ring, after some little time, was again formed. At ten minutes past three o'clock, Randall appeared and threw up his hat in the ring, attended by Paddington Jones and Whale, as his seconds; Parish shortly followed, and repeated the same token of defiance, followed by George Head and Spring. Several amateurs of rank were in the ring; and Colonel Barton, the patron of Randall, sat down close to the stakes. After shaking hands the men set-to and began:

(To be continued in our next.)

## BRITISH BIRDS.—NO. XXIX.

THE HERON.

**A**LTHOUGH the heron is of a long, lank, awkward shape, yet its plumage gives it, on the whole, an agreeable appearance; but when stripped of its feathers, it looks as if it had been starved to death. It seldom weighs more than between three or four pounds, notwithstanding it measures about three feet in length and in the breadth of its wings, from tip to tip, above five. The bill is six inches long, straight, pointed, and strong, and its edges are thin and slightly serrated; the upper mandible is of a yellowish horn colour, darkest on the ridge, the under one yellow; a bare skin, of a greenish colour, is extended from the beak beyond the eyes; the irides of which are yellow, and give them a fierce and piercing aspect. The brow and crown of the head are white, bordered above the eyes by black lines, which reach the nape of the neck, where they join a long flowing pendent crest of the same colour. The upper part of the neck, in some, is white, in others pale ash, the forepart lower down is spotted with a double row of black feathers, and those which fall over the breast are long, loose, and unwebbed; the shoulders and scapular feathers are also of the same kind of texture, of a grey colour generally streaked with white, and spread over its down-clothed back. The ridge of the wing is white; coverts and secondaries lead-colour; bastard wings and quills of a bluish black, as are also the long, soft feathers, which take their rise on the sides under the wings; and, falling down, meet at their tips, and hide all the under parts: the latter, next the skin, are covered with a thick, matted, dirty-white down, except about the belly and vent, which are almost bare. The tail is short, and consists of twelve feathers of a cinereous or brownish-lead colour; the legs are dirty-green, long, bare above the knees, and the middle claw is jagged on the inner edge.

The female has not the long flowing crest or the long feathers which hang over the breast of the male, and her whole plumage is more uniformly dull and obscure. In the breeding-season they congregate in large societies; and, like the rooks, build their nests on trees, with sticks, lined with dried grass, wool, and other warm materials. The female lays from four to six eggs, of a pale, greenish-blue colour.

The heron is described by Buffon as exhibiting the picture of wretchedness, anxiety, and indigence, condemned to struggle perpetually with misery and want, and sickened by the restless cravings of a famished appetite, &c. However faithful this ingenious naturalist may have been in portraying the appearance of the heron, yet others are not inclined to adopt his sentiments in describing its habits and manners, or to agree with him in opinion that it is one of the most wretched of animated beings. It is probable that it suffers no more than other birds, many species of which employ equal attention in looking for their prey, and it is not unlikely that the heron derives pleasure from it instead of pain. This bird, however, is of a melancholy deportment, a silent and patient creature; and will, in most severe weather, stand motionless a long time in the water, fixed to a spot, in appearance like the stump or root of a tree,

waiting for its prey, which consists of frogs, waternewts, eels, and other kinds of fish; and it is also said that it will devour field-mice.

The heron traverses the country to a great distance in quest of some convenient or favourite fishing spot, and in its aerial journeys soars to a great height, to which the eye is directed by its harsh cry, uttered from time to time while on the wing. In flying it draws the head between the shoulders, and the legs stretched out, seem, like the longer tails of some birds, to serve the office of a rudder. The motion of their wings is heavy and flagging, and yet they get forward at a greater rate than would be imagined.

In England herons were formerly ranked among the royal game, and protected as such by the laws; and whoever destroyed their eggs, was liable to a penalty of twenty shillings for each offence. Heron hawking was at that time a favourite diversion among the nobility and gentry of the kingdom, at whose tables this bird was a favourite dish, and was as much esteemed as pheasants and peacocks.

Mr. Lubbock, in his book quoted in another part of this number, observes of this patient fishing bird, "Although many heronries have been broken up in the last half century, some still remain; and detached pairs of these birds breed about our marshes and broads, sometimes upon an alder in a carr—sometimes amongst the reeds in the most inaccessible part of the fen. When, a few years back, a community of these birds existed at Keswick near this city, the flounder, called provincially "Butt" was often found under the trees in the breeding season. This shows the distance to which the Heron goes for booty: these butts must have been brought from Borough flats at the back of Yarmouth.\* It has been usual in books of Natural History to call this a miserable bird. This may well be doubted: the very watching for prey gives pleasure. I have observed a tame Heron, when satiated with food, still standing by the tub in which roach and dace were swimming about striking them at intervals, and then letting them go again. In a decoy it is a great nuisance: it disturbs the wild-fowl, in the first place, when they sit upon the smooth banks at the entrance of the pipes, by stalking continually about with long strides, molesting them whilst dozing; and in the next, is equally hostile to the decoyman's attempt to take them. The senses of hearing and smell are so acute in the Heron, that he detects the presence of man when wild ducks cannot do it. Into the air he rises, with flagging pinion and a boding shriek, and all the wild-fowl dash away in an instant, being quite sure that some danger is at hand, although they cannot tell what it is.

Sir T. Browne speaks of heronries as most common in his time in Norfolk, and that the young were esteemed a festival dish. The bird seems to have stood at the head of delicacies. Six herons are especially mentioned in the L'Estrange manuscript as brought into the larder in one fortnight. The Heron is now in no esteem for the table, but appears formerly, on the continent as well as amongst us, to have been of great price. Take, for instance, the bill of daily fare provided by Henry IV. for the Cardinal Aldobrandini, who accompanied Mary de Medicis to France:—forty-five dozen loaves, six vessels (barili) of wine for his suite, twenty-six bottles of ditto for the cardinal's table, five sheep, 150 pounds of beef, two calves, sometimes one or two kids, from ten to twenty turkeys, six or eight great and from thirty to thirty-six ordinary capons, eight or ten ducks, two herons but not every day, &c. &c. See Raumer's History of the 16th and 17th Centuries, from which it seems that the kids and herons, the rejected of modern days, were then first in the list ofainties.

## CORRESPONDENCE.

## THE DISTEMPER IN DOGS.

Sir,—It is with much diffidence I take up my pen on a subject I am perhaps not fully capable of entering into; but your valuable publication being perused not only by sportsmen (to whom my information might be useless,) but by persons in various professions, induces me to make a few remarks, hoping they may be the means of preventing disappointment, if to a single individual, by the loss of a favourite young dog. The distemper, that curse, if I may be allowed the expression, upon good dog's flesh, is a very inflammatory and malignant disease, falling on most young dogs from the age of two to twelve months. The first symptoms generally are, loss of appetite with much languor; which, if immediate attention is not paid, will soon fix itself, either on the lungs, stomach, or some other important part. The proofs to be observed when the disorder falls principally on the lungs, is a cough, with a discharge of frothy matter from the mouth, accompanied with a quickness of breathing, and comatose symptoms, caused by a determination of blood to the brain. Secondly, when the mucous membrane of the bowels is the seat of the complaint, it is accompanied with diarrhoea, severe pains, and not often without fits. Thirdly, when the mucous membrane of the stomach is the seat of the disorder, it occasions frequent vomiting of the food, either liquid or solid, and is generally accompanied with costiveness. Lastly, when the attack

\* I am glad to be able to state that these herons being deprived of their stronghold at Keswick, did not leave the county; but betook themselves to a plantation of Scotch firs about two miles distant, where this spring, 1844, there is an abundance of nests. They (the herons) still remain in the same family as before.

falls on the mucous membrane of the nose, a great discharge takes place both from the eyes and nose.

The treatment I have adopted for several years has been, on the first appearance of the disorder, to secure the dog from water, and give some warm food, such as bread and milk, &c. frequently. I also give two or three grains of emetic tartar or Turpith's mineral, to be given three or four hours after the dog has taken any food; and the day following I gave a laxative made of salts, or jalap, and calomel, &c., which treatment, if adopted on the first appearance of the disorder, I have never found to fail. But supposing the disorder, by neglect, to have attacked the lungs my treatment is, to bleed from the jugular vein almost to faintness, and afterwards give a dose of salts, or jalap, and aloe; after that has operated, give of James's fever powder a few grains at a time, which is of great service. The treatment to be observed in respect of an attack on the stomach is nearly the same as the above—with this difference, that I would recommend, in case of costiveness, to give castor-oil in preference to the other laxatives. The attack on the bowels, producing diarrhoea ought not to be stopped by astringents, but the dog should be fed on wheat-flour or arrow-root, to which a small quantity of tincture of opium may be added if the pains are very severe. Bleeding, &c. is also essentially necessary in this attack as in the former. A seton in the neck will be found a good thing when the attack appears much in the head. I knew a gentleman who saved a young pointer, by giving eight grains of ipecacuanha night and morning; but not having had an opportunity of trying it, I will say nothing. Should the above remarks on the treatment of the distemper be worthy a place in your next publication, they are much at your service.

I remain, Mr. Editor, your constant reader and subscriber,  
X. Y. Z.

#### GAME OF CANADA AND INDIA.

The beaver, the squirrel, the sable, and other martens, the fox, and the car, supplied the principal peltries which once formed the chief, and indeed the only staple of these northern districts. The buffalo, the elk, and the roe-buck supplied the food which supported the life of the hunter under all his hardships, and but little attention was given to the smaller game, which was not considered of sufficient value to repay the trouble of pursuit.

As I speak from memory, I think that I may very likely omit some one or two varieties of the smaller game; but, in the main, I doubt not that the following list will be found sufficiently complete. In the first rank I place all such of the nobler kind as are pursued with a greater degree of difficulty or danger;—of this class are the buffalo, the elk, the moose, the bear, both brown and grizzly, the beaver, the ermine, sable, and other martens, the wolf, and the wild cat; whilst in the second class are deer, foxes, otters, squirrels, hares, and rabbits.

Among the birds which are the objects of the sportsman's attention, the following may be enumerated: the wild turkey, the prairie hen, (a bird in habits and appearance closely resembling our grouse,) the grouse (which rather approaches to our pheasant), quails, partridges, woodcocks, and wild duck.

In the fishing line the list is interminable; almost every fish which we find here is to be found there, with I know not how many more besides, more especially the bass and the black fish; but so plentifully are the waters of Canada peopled, that many writers have asserted that the fisheries of the St. Lawrence would prove even more profitable than the fur trade.

The Indians have some strange notions respecting almost everything; and among the rest is their belief that the moose deer has the power of walking about under any depth of water, without the slightest inconvenience, and of remaining there too for many hours without once coming to the surface to breathe. The Indians have also a legend among them that the mammoth still ranges through the farthest wilds of the Far West;—no one has seen, but all have heard of this strange quarry; and the Indian when interrogated on the subject, will gravely shake his head, and point towards the setting sun. A price is set in Canada upon the heads of bears and wolves, and many and frequent are the encounters to which this custom has given rise. The latest battle upon record was that of a bold Canadian in one of the upper townships, who, in returning home one evening encountered a fine fat bear. Bruin turned tail, and would have gone upon his way in peace, had not our hero, whose gun was loaded with small shot, fired upon the enemy as he retreated; this was an insult which no bear could brook, and forthwith he faced round and rushed upon the settler open-mouthed. The man was taken by surprise, but hastily clubbing his gun, he gave his opponent so severe a blow on the muzzle, that bruin again turned tail and made off;—the hunter too had no sooner dealt this valourous blow, than he faced round, and forthwith ran away as fast as fear and two good legs could carry him—and thus the two enemies ran off in opposite directions, without the possibility of its being decided who ran fastest, or who was master of the field.

For prints of the birds, your correspondent may consult Audubon, Wilson's Ornithology, or Bonaparte's History of the Birds of the United States.  
E. L.

SIR,—In answer to the inquiries of T. B. contained in your 26th ber, I beg to hand you the following list of the principal kinds of which afford amusement to the sportsman in India. The *beat* is one, and the list sufficiently various to afford full scope for the gratification of T. B.'s sporting propensities should he think of "going out."

To begin with quadrupeds: the elephant not only for his size, but the sport which he affords, challenges the first place. The tiger, as more frequently an object of chase—chase on foot—and generally giving better sport, is intitled in India to take precedence of the lion. These magnates come the leopard, the bear, hyena, and the wild hog-jackal and the fox may be bracketed, as they are both hunted with hounds. Among the herbivorous animals, are the buffalo, the bison, the nyli-black deer, sometimes called the elk, the axis deer, the jerboa, musk-deer, and the antelope. Hares are plentiful in India, and jungle-lamb frequently contributes to make up the sportsman's bag.

Among the birds, edible and non-edible, are the eagle, the vulture and the kite; the bustard, the florikan, the pea-fowl, and the heron, the pheasant tribe, the jungle-cock, the cheer, and the koklass—the latter chiefly confined to the Himalaya district; the painted and black partridge, the woodcock, the quail, and the snipe. These are that occur to my recollection at this moment.

The principal fish that engage the angler's attention, are the trout and the mahseer; and where there are no trout or mahseer, the sportsman may frequently have an opportunity of tackling an alligator, a keen biter, who has no particular objection to a man's leg. In the streams of the Himalaya mountains an otter is now and then speared.

I cannot point out any work where correct prints of the birds are to be found. Lithographed engravings of a few of them, very indifferently drawn and executed, are to be found in the Oriental and Bengal Sporting Magazines.  
Yours,  
Jan. 20, 1845.

SMIKEREE.

#### COURSING AND THE GREYHOUND.

(Continued from page 554.)

##### SECTION VIII.

##### VARIOUS SORTS OF HARES.

LEAVING for a brief space the flying "longtail," we will say a few words about sly puss.

There have been as many disputes, concerning the stoutness of hares as there can possibly have arisen upon the same quality in greyhounds, and almost every courser lays an equal claim to precedence in this respect. I have no doubt whatever but there are good hares all over the kingdom; still to say that one part of it may not be superior to another, would be an assertion very difficult to maintain, especially when you hear one man speak in favour of those of an enclosed country, another of an open, and a third of hilly or mountainous land. There are three causes, perhaps, which more or less contribute to this perfection—climate, food, and exercise. In regard to the last, it is well known that hares, which are seldom disturbed, rarely travel any distance from home, and therefore cannot be in wind equal to others of a more roving disposition, which is sufficiently attested by comparing the strength of a male hare in March and in any of the preceding months. It may perhaps be asked if it is a very material upon what a hare feeds, provided the food she procure be wholesome and nutritious? I answer, undoubtedly it is; for I look upon a hare in this respect to be somewhat similar to a sheep—and call there be two animals more totally different than the Tees-water and the South-down? They both get fat it is true, but the one sooner, and in an idle, luxurious manner, and the other by hard labour as it were, and continual striving; so that it requires very little penetration to discover which of the two is in the best condition to undergo fatigue. In fact, what is it that makes the flesh of the mountain sheep so much more firm and sweet than that of the lowland, but a variety of herbage and a constant unsettled disposition in endeavoring to procure it? The hare of the downs then must be in better running condition than any other, for also knowing that there is no shelter for her within a certain distance, she will naturally keep herself, in such case, as to be able to reach her refuge without feeling any serious want of strength, if compelled to exert it. To be certain indeed, that this is the case, and that the hare of the downs travels over a greater space of country in the night time than any other, it is only necessary to observe, when hunting with harriers, how much longer her trail is, which frequently draws you three or four miles before you come to her form, whereas it generally happens that in enclosed countries you find your game within a few fields, in the first or second fence, or at any rate the nearest thicket; and however a hare may be tempted to leave her native hills, and visit her companions of the plains, she never remains there beyond a single day, and if disturbed during that period, invariably retraces her former route. Moreover, what conduces, in a great measure, to weaken and destroy the powers of hares, is their immoderate attachment to turnips, which, in a wet sea-

son, is as fatal to them as to sheep, and it is so common an observation for a countryman to make, when a hare has shown a bad course, that she is rotten, that, under such circumstances, I am very positive, nine times out of ten, her lungs, on inspection, will be found to be either totally, or nearly, destroyed. All these causes then, warrant the conclusion that the hare of the downs is superior to every other.

The attachment which these animals shew to the spot where they were first brought forth, is never to be subdued, except by death, and very frequently after the longest courses and most severe runs, they may be found in the same form from whence started the day preceding. Almost every village can boast of a hare of this description, and if she is fortunate enough to escape for any length of time the vigilance of her enemies, her character becomes so notorious as to afford matter of the most strange speculation to the whole surrounding country. Hounds and greyhounds, hitherto invincible, now find their best endeavours fruitless and unavailing; the most extended chase is but a prelude to defeat and disappointment, until "the old witch," (a title now bestowed upon her,) at length assumes every shape to complete the discomfiture of her astonished pursuers! At one time she takes shelter amidst her sisterhood in the hen-roost; at another suddenly changes her sex and shape, and becomes the guardian of the fold, and in the end is transformed into the real picture of miserable humanity itself, some aged crone, who with all the "variety of wretchedness" is discovered sitting within her spacious mansion! This is no sketch of fancy, nor is the coloring heightened beyond the touch of reality, and however of late we may have emerged from that mist of superstition which in bygone ages clouded our better faculties, so long as a mistaken fanaticism still impedes our view, will these occasional exhalations for a moment, perhaps, obtrude in remote districts; aye, and find believers.

We must now consider how far climate promotes that quality in hares which I have already in part attributed to the effects of food and exercise. Whatever country a hare may inhabit, she will always be found to change her situation accordingly as the weather is open or severe, seasonable or cold, and upon every occasion to choose that particular spot which is most favourable to the enjoyment of the one, or affording a shelter from the other. Thus in the winter she usually prefers a southern aspect, and in the summer a northern one. The wind, however, more generally determines this choice, and enables her at the same time with a very surprising accuracy to foretell any change in the atmosphere; by this means a good hare finder is seldom at a loss to determine upon his line of range. We must not, however, suppose that this fickle disposition is stimulated solely by a regard to comfort; other causes no doubt equally prevail, amongst which that of health is certainly a principal. That good air is conducive to this, no one, I believe, will deny, and that such is more likely to be found in elevated and open situations than in those which are contracted and confined, will bear the same analogy. We are told that the mountain Arab is superior to every other horse in the substance and strength of his sinews, owing to the particular quality of the air of the desert, which is so free from vapours, that upon the brightest sun, after laying abroad the whole night, there will not appear the least shadow of rust. To be certain, however, of the effects of dry and humid air upon any substance exposed to it, suspend a string with a small weight affixed to the end, and observe its contracted and relaxed state at each different change, and, if we suppose the sinews of every animal to be composed of so many various threads or fibres, we may at once account for the effect of air and climate upon the powers of the whole.

This effect of climate may not only be observed to influence the stoutness and activity of hares, but also their growth, and in some countries their color; generally speaking, the hare of the hills is a much less animal, another reason also why her powers of action are more free and capable of sustaining greater fatigue; as for a difference in color it is only material as affording a further proof of the constitutional change which is produced by different temperatures of heat and cold. I cannot confirm the foregoing remarks more effectually than by inviting the reader to try the difference which exists between the hares in his own country and those in an opposite neighbourhood; and to prepare him against any disappointment which the fruitless endeavors of his dogs might occasion he must arm himself with all the philosophic firmness of a probationary candidate. While on this point I may observe, that a friend of mine gave away the last season what he considered a very moderate dog indeed, yet he afterwards learnt that his superiority in an enclosed country was so decisive that he killed every hare in ten successive courses, single handed! Indeed the mongrel looking animals that you see in the possession of many individuals, who are well known to keep nothing for shew alone, will at once convince the complete sportsmen of their very dubious, if not to say insignificant powers, when put in competition with a real game hare. Indeed it has never, within my experience or knowledge, happened, that one of these family greyhounds, though ever so well educated, was in any degree able to contend with the more generous attributes of perfect breeding.

*To be continued.*

"That's the first round to me!" as the boy said when he finished the buttered toast.

## CANADIAN SPORTS AND PASTIMES.

The principal amusement of the Canadians is hunting; in fact, this is a nation of Nimrods; and there are few who do not possess a rifle or fowling-piece. Game is fast decreasing, though where clearing is only partially done, deer is more plentiful from the settlers destroying the wolves, which hunt them in packs like dogs, and the foxes which destroy the fawns. A vast number of deer are annually killed, and sold on an average, in London and Western districts, where they are plentiful, for less than two dollars, each weighing about one hundred to one hundred and eighty pounds. I know one farmer who killed thirty-six last fall. The best time for hunting is in the morning, after a slight fall of snow, which shows their tracks; a white great-coat or blanket coat is best, as you are least observed by the deer in that dress. The hunter who expects to succeed, must be very wary, and lay his account for fatigue; in general, the "cost o'ergangs the profit."

Bears and wolves are yet plenty in new townships, and some stragglers come near the villages occasionally, but they are now getting scarcer, the first, from the value of his skin, and the wolf, from the premium of from four to eight dollars being given for his scalp, by the country. Mr. Bruin is a surly John Bull sort of a character, inoffensive in his disposition, but likes pork, occasionally takes a hog, and when hunted for it dies game. But the wolf is a cowardly sneaking animal, and will run unless a number of them are together. There is nothing I have ever heard so mournful and frightful (as I can say from experience), as being benighted without fire, near the swamps where they lodge, and hear them howling to one another; but there is very little danger if you have a fire, as they will not come near it. The settlers assemble sometimes, and hunts are formed to reuse them and the bears out of the swamps, and often the chase continues many days, but the wolves are mostly trapped; so are foxes, which retain a strong hankering after poultry and pigs.

Beavers, and the other very valuable fur animals, have totally disappeared where any settling has been done. Martens, muskrats, minks, and others, will soon be extinct; not so with all kinds of squirrels, racoons, chipmunks, and other vermin who infest the corn fields; you would think they are getting plentier, though vast quantities are annually killed. Some of the best shots in the world are here. I have seen vast quantities brought in, mostly shot through the head. An acquaintance of mine in Youngstown killed one afternoon twenty-four out of twenty-seven shots, and most of the squirrels were shot through the head with ball.

A good many turkeys are shot and trapped in London and Western districts; there are none I am told in the others, but all over Canada partridges of different kinds, pheasants, ducks, and but too many hawks, abound. Pigeons, in spring, come in such flocks, that sometimes a dozen have been taken down at a shot; in other seasons you may find stragglers, but none knows where the great body of them go. A few wild geese, cranes, and quails, are found, but very few crows, unless in old settled districts; there are comparatively few birds of any kind, and no songsters; but the plumage of the commonest bird is beautiful. The only birds of song are the frogs; if near a swamp, you will hear all notes from a tenor to deep bass. You may laugh at the idea of frog-singing, but it is far from being disagreeable. There are some enormous bull-frogs, and a kind that perch on trees, which are much valued for the skin, as the settlers say, but they are rarely caught. The Indians and some settlers run the deer with hounds, particularly in Newcastle district, near Rice Lake, and the other lakes back of Peterborough. The deer takes to the water, where others of a party are waiting for them in canoes or skiffs. But the greatest number are killed by "still hunting;" the hunter going out alone, and without dogs, and shooting them wherever he meets them; on the whole, it is not much followed by old country people; many who risked life and liberty to kill a hare, never think of taking up a gun, giving as a reason that they care nothing about it now that they are not prevented. A good many fish are caught in the lakes at certain seasons. Salmon are not found in any of the lakes but Ontario, and the rivers emptied into it; they are mostly speared at night by torch light, are good eating, but have not the same flavour as yours. Muscalonge, which is the same as your pike, is very plenty and large; is taken mostly in spring; so are sturgeons, whitefish, trout, and a host of others, too tedious to mention. There is a kind of herring very plenty in Lake Ontario, and plenty of mullets, which is a fish like a small salmon, and so tame or stupid, that, with my hands alone, I one day in a few minutes took out nearly as many as I could carry.

There are few athletic or manly sports practised; no cricket, ball, or quoit playing, no "shinty or curling," though both wood and ice are plenty; all is absorbed in the ruling passion—shooting, gambling, and horse-racing, and in days of training the militia, a little wrestling, which often ends in fighting. A horse race is the place to see the folly and fashion of the backwoods. All kind of tricks are put in practice to cheat the unwary, and there are generally two or three proprietors of gaming tables, who entice simpletons at night, and cheat them of their money. The very children have not the turn for the amusements of the old country, I have seen no marbles, hoop, button, or other games common to children; it is true the young creatures will play, but it is for money, and will bet like old fellows; in short, to see a boy of ten or twelve years of age, you would almost think him either an old man cut down, or

believe in transmigration, and that his little body inherited the soul of his grandfather, he is so sly, so apt, and, in short, "auld-farrand."

Turkey and geese shooting matches are very common in winter. The victim is put at the distance of from fifteen to thirty rods generally according to the price of each shot at them, varying from six to twelve cents a time; he who kills wins. Shooting parties matched against each other, sometimes on large wagers, but generally a dinner, sally forth, each endeavouring to bring in the most game; it is almost incredible the quantity killed on such occasions.

## The Sportsman's Magazine.

### Reminiscences of Racing and Racers, in 1845.

(From the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 556.)

Having disposed of the first October, I will just advert to some intervening Races and conclude with the Second October. In another communication I shall have the Houghton, and hope to relieve your readers from conning over my rather dry statement of things that were. At the same time I am inclined to think it will be found useful to your sporting readers of the Turf as a reference. I feel obliged by your kind notice of me and feel gratified by your attention; my regret is, that owing to other avocations, I cannot give these papers the usual embellishment or render them so entertaining as I wish.

At the STAFFORD RACES, Mr. Parr won two races. The Tradesmen's Purse with Beggar Girl and the St. Crispin Stakes with Vitula. Nix My Dolly beat T'Auld Squire, and The Rhine for a Free Handicap. Isabella won the Bonehill, her only good competitor being Mr. Hill's Brother to Beaumont. Roderick won the Innkeeper's Plate, Eveline, the Ladies' Purse, and Florine the Stafford Stakes beating Beggar Girl and another.

The PAIN'S LANE RACES had but two good races, both of which were won by Glaucus, out of March First filly, beating Tippoo. In one of your numbers where I mentioned Tipoe, the word was printed Tippoo. The animals, however, differ very much more than the names.

At the PIGBURN RACES some good animals contended, having all the advantage of Yorkshire training, and that kind of breed which the Yorkshiremen have so carefully preserved and maintained. Your readers will hardly know what the Chatsworth Lass, Cartledge, Dice, Maria, Belle, Skylark; there was a Mundig there, aged, but I do not know whether he was the Mundig.

At the "YORKSHIRE UNION HUNT CLUB" Meeting, Flagsman (200 sov.) won the Tally-ho Stakes beating Millepede, Hamlet, Carysfort and another. The York and Ainsty Handicap was won by Cataract, beating Red Rover and Marian Ramsay; a good race. Horatia won the Gold Cup, beating Wildgoose. Flagsman won the Scurry. Alice Hawthorn was introduced here to run for the Champagne Plate and (how are the mighty fallen) a 5 sov. Sweepstakes 25 added; she won both. A filly by Sheet Anchor, out of Fawn, won a Gold Cup, Marian Ramsay beat Porto Bello for a 10 sov. Handicap, and Poussin won a race against Pedometer and a Wizard mare.

Mr. Merry won, with John Harris and Pilot, both the good things at the DUMFRIES RACES.

At KNUTSFORD, Dr. Husband had one walk over, Sweetmeat, two; Quebec beat Lord Saltoun and his Lordship beat Hooton, April Noddy, and the Nobbler. Auringzebe won a poor affair easily.

The NEWMARKET SECOND OCTOBER, October 13, opened with a Handicap Sweepstakes of 10 sov. each, being carried off by Skeleton against Example, Sir Francis, African, Sister to Ma Mie, and another; a capital race for second. In a match between Duc an Durras and Captain Phoebeus, the Newmarket "finish" was witnessed to perfection; the Irishman first. I consider Fugitive won the First Class (50 sov.) easily; for the merits of the others I cannot say much: Montreal, perhaps, is not so; as for Little Vulgar Boy and the Discord filly, 'I'll none of them.' For the Second Class (50 sov.) a capital race ensued between the Hero, Terrier, and Repeal, which ended as they are placed, but it was a dead heat between the two last mentioned. In this race Buttress and the Pet colt cut a very bad figure; both these races are among two year olds. In a 10 sov. Sweepstakes, a filly by Beiram out of Manto beat Lord Orford's Derby colt, (by Clearwell), Alamode third, and some others. Event beat Maynooth, Misdeal, Stitch, and some others, for 50 sovs. Lady Anna (Mr. Phillimore's; his Skeleton also won as above) beat Leopard and Thebes colt for the Royal Stakes of 200 sov. each. The Cesarewitch Stakes were won by the Baron, carrying a few lbs. more than Wee Pet, 2lbs. more than Vol au Vent, and near a stone more than Plantagenet: there were some good horses in the race, but not suited either for the distance or pace: I must say the Baron won easily, but we all know the Wee Pet has

been beaten over and over again by horses in this country. In the matches up to this time, Minotaur, receiving weight, beat St. Lawrence. Prologue, giving weight, beating the Impertinence filly. Nottingham, giving weight, beat Cressus. Oakley, giving weight, beat the Bishop of Romford's Cob. Sting won the Clearwell easily, beating Princess Alice, Ennui, the Mecca colt, Collingwood, and Ohio. The two first named, and the Miss Milner colt third, were only placed. For a 10 sov. Sweepstakes, won by Deer Chase; Caroline, second; the Pretender and Malvoisie shewed very badly. Poor old Trueboy was beaten by Jet, by half a neck, the result of bad riding, perhaps, and whipcord. Metal won the Town Plate, beating a good field of five, four, and three years old. Prologue, receiving 2lbs., beat Vaudeville in a match. Motilla, giving 3lbs., beat the Miss Whip filly. For a Sweepstakes of 10 sov. each, the Voluntary colt running well, beat Chandelier, the Clearwell colt, Tell, Cerberus, and another, and was claimed, and is, I think, now Lord George's. In a match, the B. of R. cob, giving weight, beat Duc an Durras. Buff won a 100 sov., after a good race with three, four, five, and six years old. A very close thing, just what might be looked for at Newmarket (where they like to win by a head!) ensued between Cuckoo, Ennui, and Polka, for the Breby Stakes, which ended in favour of Cuckoo (who may come again in the spring of the year), Polka, of course, superseding Ennui for the then coming season of Christmas.

I must not trespass any further at present. The last day's sport shall be given in my next.

(To be continued.)

### TO CORRESPONDENTS.

SEMPER EADEM.—According to your own statement no warranty was given. You have therefore no plea for returning the horse; he may not be so good as you expected, but that alone is not sufficient to vitiate the bargain.

HENRY B.—The Stamped Edition of this paper, containing the report of Walker and Barnash's fight; as also that of Perry (the Black) and Burton were published within two days of the respective events.

L. B. C. Southall.—It is customary for losers to partake of the grog or liquor which forms the subject of the bet. The quibble is absurd as well as shabby; in the case of a single glass, a loser might as well decline, but custom (and practice makes the law) gives him a share as some consolation for paying for the whole.

A YORKSHIRE CORRESPONDENT.—You are privileged to sell any articles you manufacture yourself, without taking out a hawk's licence. To your second question. The volume will be completed in forty numbers.—Cases for binding it are in preparation; the price will be about 1s. 6d. each. A title-page and index will be given, and the chapters of Boxing which originally appeared in "THE SPORTING WORLD" be reprinted.

SECUNDUS.—You have no remedy at law: but you have a moral claim on your master's generosity and consideration.

TRIGGER.—A misfire, by the Red House Rules is a lost bird at Pigeon-Shooting.

W. P. Hoxton.—We need hardly tell you that very dry walking ground is more important than even warmth to the well doing of the brood. Alum curd is by no means to be despised, though few can adopt it so well as yourself, being a cowkeeper. They will soon take grain. To promote laying, nothing more is required than the best corn and fair water, often changed; malted, or sprouted barley has often a good effect, if your hens are kept on solid grain, but if continued too long is apt to scour them. A very small quantity of the cordial horse-ball is good to promote laying in the cold season, or a little toast soaked in beer, as every housewife knows well. Pullets, if early birds, will lay as many eggs in their first year, as at any period of their lives, but the eggs are small, and young hens are unsteady setters. A two year old cock, or stag, and pullets in their second year should be bred from. They are in their prime at three years, and decline after five.

S. S. C.—The furriers' treatment of sable and other valuable skins is the only method we know of: shut them in a drawer in a dry place, and throw an abundance of cedarwood chips or shavings among them. Or pepper them well and beat them gently. If the hair is coming off, we fear the "moth" has mined them.

F. MANLEY, Hoxton.—The best breeding rabbits are those kindled in March. Young rabbits should be taken from the doe at the end of six weeks. Do not give too much green meat, but dry and substantial food to the animal troubled with looseness—give oats, peas, and wheat. Ground malt, or peas you will find good for your young rabbits, with an occasional succulent leaf.

SILVER-KIN.—The wild goose, so far from being extinct, may be seen at this very season in flocks of from fifty to one hundred, in Cambridgeshire, Lincolnshire, and Norfolk; they fly very high, and in a regular order, by which they are easily known from other birds. The flock either forms two parallel lines, or else two lines joined at the front end, like a wedge.

E. R. Tiplon.—A hare when she runs the same ground she has run before, is said to run "the foil." The term *foiling* means also the looting or treading of a deer on the grass.

G. Teddington.—In Nos. 28, and 29, we gave cuts and description of the black and the common squirrels. It would be too much of a joke to repeat them next week at the request of a single correspondent; both the numbers may be had for 3d., and independent of the mischief it would do us with regular subscribers, the matter would cost us some dozen of shillings setting up. He further asks about "a trap for the stoat or weasel."

The Lord preserve us! Only a month since (No. 32, page 493) we gave three engravings describing the box-trap, with explanations. What "a Constant Subscriber," G. must be!

M. R. J.—Doleful's dam was Frederica, by Little John. Brocardo has no engagement before the Derby.

### OUR WEEKLY CALENDAR.

SUNDAY, FEB. 1st.—FOURTH SUNDAY AFTER EPIPHANY.—Pheasant and Partridge Shooting ends.

MONDAY, 2nd.—Candlemas Day.

TUESDAY, 3rd.—Harry Broome and Ben Terry, for 200l., see our Stamped edition of Feb. 5th.—Powell and Cooper, of Knightsbridge, walk 7 miles, for 234. a side.

CHOP.—The best place in the world for chops is China, where persons of the highest rank have alone the privilege of serving them.

WEDNESDAY, 4th.—Bigger (Stirlingshire) Coursing Meeting.

THURSDAY, 5th.—South Lancashire (Lytham) Coursing Meeting (and 5th).—Sir Robert Peel born, 1782.

FRIDAY, 6th.—Hornby Park Coursing Meeting, and Ribblesdale ditto (and 5th).

SATURDAY, 7th.—Mary Q. of Scots, beheaded, 1587.—THE MOON'S AGE.—The moon, like certain politicians, changes every thirty days, when she looks at things in general with quite a new face. If a fact were wanting to determine the sex of the moon, it would be found in her obstinacy about her age. Like most ladies, she is never more than a day older than thirty.

### THE MOON IN FEBRUARY.

First Quarter, 2nd .. .. .	5 11 after.
Full Moon, 10th .. .. .	9 12 after.
Last Quarter, 18th .. .. .	4 43 after.
New Moon, 25th .. .. .	7 31 morn.

## FOX-HUNTING.—SCENE IV.—THE DISASTER.

**A**CCIDENTS will happen in the best regulated families," and the brotherhood of foxhunters forms no exception to the rule. Here we have a case of double post and rail, which we think has proved a little too tough a subject for the gentleman on the bay. These are some of the trifling drawbacks of sport; bruises may, however, be got in other ways, as the following amusing little scrap, from the pen of "Beeswing," will testify. "We were amused at finding, first in the local papers, and then in a London paper, some short time ago, an account of a day's run with a pack of hounds; it has clearly been written by either some wag, or one of those sporting gents; for though it reads well enough upon paper, those who are in the secret know that it was a day's sport that no gentleman would like to have his name connected with. The account of the hunt ran something like this:—

"**CUTITFAT HOUNDS.**—This celebrated pack of foxhounds met on Friday last at Drubhem-hall, where there was a brilliant field assembled. They drew Brydone Wood, and found immediately; raced him past the Hall and Farm Woods, along the bottoms to Aylford-hall, to the village of Aylford, Parson's-gate, Ironstone Wood, over Bushy-hills. He then took the river Deepe, and away to Flat Plantation, and then to Bokehouse to Henly Wood. The hounds pressed him so close that he remained in this large cover but a short time: he took for Henly village, but was headed, and made for the river Deepe again, which he recrossed at Stopford, and then ran to Hedgewood, and thence to Catchem Dean, where he was run into and killed, after one of the fastest runs on record in this part of England, not a single check intervening between the find and the finish—the pace killing—time, one hour and a quarter. There were only three gentlemen in at the death, viz., the worthy master of the hounds, Edward Stumble, Esq., M. Pill Thickset, Esq., and another gentleman." This reads plausible, but we will describe the real day's sport for the benefit of the public, and show how newspaper editors and the readers of their papers are gulled with "brilliant runs." It may be necessary to give a short history of the "celebrated" Cutitfat hounds, as they call them, so that our readers may have an idea of the respectability of these celebrated hounds in the first instance. A few years ago there resided in a comfortable-looking farm-house at Aylford, a jolly old gentleman, who lived upon and farmed his own property, which was not very extensive, but sufficient to enable him to enjoy his glass at his ease; he was what in the north of England and Scotland, we believe they call a "Laird." He was fond of hunting, and kept some six or eight couple of hounds amongst his cottagers, for an occasional run with a hare upon his own estate; or if he found a stray fox, they would run him either, for his dogs had no objection to run either hares or foxes, though they seldom killed any of the latter. The laird was a fat, com-

fortable-looking old gentleman, and his hounds were fat drowsy-looking dogs—dogs that had once had spirit in them, but ease and good living had nearly driven it out of them. The laird's hunting was like a gentleman's we once knew, who kept a pack of beagles; and he sometimes ran a hare a whole day without killing her; he would then stick up his stick where they left off, and commence upon her there next morning. Mr. Stumble—Laird Stummel, as the neighbours called him, had a son who was fond of hunting as well as his father, but he did not admire the slow work his father made of it—he was a steeplechase gentleman, the young one, and when his father "went to the dogs" and left him heir to the property and the hounds, he remodelled his pack, mounted an old thorough bred, and "sporting the pink." He went fast—in the now general acceptance of the term—exceedingly so; "the pace killing," and in a short time he found he was in the situation of a certain Irishman who boasted of having a thousand a-year, *but it was spent*. The young laird, or, as those that wished to flatter him called him—Squire Stumble, hit upon the scheme of turning his pack into a subscription one; the only difficulty was about the subscriptions. At last a few gentlemen—gentlemen in the proper sense of the word, who resided in the Squire's neighbourhood, came forward willing to support a pack of hounds if properly managed: some sporting gents also, who had no objection to make acquaintance with an openhanded good fellow like the Squire." A good huntsman was engaged, and the pack ran a season; modest but fair reports of their success occasionally appeared in the local papers, and every thing about the new subscription pack appeared to prosper; but the Squire—we do not wish to be taken for those who flatter him, but as that is now his most usual title, we have called him so through this sketch—(a man who, as long as you let him have his own way and don't disturb him over his glass, is good-tempered; but contradict him, and the devil won't drive him) would be not only master of the hounds, but huntsman, sole proprietor, and occasionally he would like to have had the field to himself. The gentlemen grumbled, and finally withdrew their subscriptions, being disgusted with Stumble's overbearing manners; the huntsman left him, and he had nobody but a few sporting gents left to keep him in countenance. Another season opened, and as the Cutitfat hounds were not expected to commence hunting, overtures were made to Mr. Stumble by the members of the Tunstall hounds to take his hounds off his hands, along with his country, although it was only the country they wanted; this annoyed the "worthy master," and he swore terrific oaths, as "was his custom in the afternoon," and said he would "hunt his hounds till he was blind." Nothing was heard of the Cutitfat hounds and their "worthy master" for some time, at least not by us, until by accident we took up a

paper published in the Squire's neighbourhood, and saw the account of the day's run mentioned above; we thought it was a hoax, and we have our doubts yet. It was afterwards seen in a London paper, and given forth to the world as a great feat of these hounds. We have had an account of the true day's sport from a person who was an eye-witness to most part of it, and we will see how it tallies with the published account. It seems "M. Pill Thickset, Esq." and the "other gentlemen" are sporting gents, and the most determined adherents of the Squire, in fact are great friends of his, for Stumble does not care much who are his friends, if they only agree with him, and are willing, after drinking and smoking all day, to drink and smoke all night. Well, Mr. Thickset and his friend and the Squire had made a night of it at Aylford, and on the next morning the hounds, were advertized to meet at Drabhem Hall. Thickset and his friend had a fancy for a day's hunting, and they were anxious about the weather; it was not propitious, however, for at daylight it was a "black frost;" no one could ride, no dogs could run. Any one who knows the nature of frosts will be aware that what is called a "black frost" is one of the severest kind. Stumble thought it best to "make another day of it" instead of hunting; but the gents had come out from the neighbouring town on purpose for a hunt, and a hunt they must have some way or other, they care nothing about frosts. By manœuvring they got the "worthy master" to order out the dogs, and away they went "pipe in mouth." The Squire remarked on the way, "It's a damned slope (slippery) ay can hardly stand, an ay wadn't like to ride." No one thought of riding—in fact, no one who had any sense would have expected hounds to throw off on such a day, it was so hard and slippery, and the "brilliant field assembled" consisted of our three worthies and their sticks. "They drew Brydene Wood and found immediately," this we believe was true enough, but our heroes, if we may so call them, lost the hounds shortly after, and did not again see them until some of them had crossed the River Deepe in pursuit of the fox; they came up with by far the greater portion of the dogs, who had not courage to swim the river on so cold a day; they could not be persuaded at all to follow further. The river could not be got across without getting wet up to the waist, and our friends had not got their blood up to sufficient heat, and therefore thought it better to leave the dogs that had crossed alone, and they would soon come back. Stumble seeing that some of those about him had cut themselves with running, thought they had better drop for the day, and as they were near "Oad Nanny Brewker's," they would go in and have a "pint" till the other dogs "cast up;" accordingly they went into "Oad Nanny's," and drank sundry quarts of beer and "half glasses" of brandy, and smoked innumerable pipes of tobacco. With an eye to business, one of the sporting gents proposed they should play at "pitch and toss," as it was "slow work" drinking and nobody saying anything, for it appears they were remarkably silent. The table was put out of the way, and at it they went upon the floor, first for halfpence, and then for "glasses round," and when they had got the steam up again, Mr. Thickset said he would jump either of the others over the table for a "sov." The bet was taken: Mr. Thickset put off his coat and looked nervous—principally about the "sov." we should think, for if we could only have looked into his pockets, we would have found no sovereign there—he took a spring up to try whether he could do it or not, and then swung his arms fiercely about, until he knocked a pot of ale out of old Nanny Brewker's hands, and then away he went at the "rasper," as he called it: next he was seen lying on the floor, with the table on the top of him, and one of his eyes looking inflamed, which, as you watched it, seemed undergoing some process of colouring generally attained by what Grantley Berkeley calls a "punch;" in the end it turned out to be one of the finest specimens of a black eye that we have seen. Before order was restored after this mishap of Mr. Thickset's, the hounds (that would not cross the river, and which were prowling about the inn) gave mouth, and on our sporting gents rushing out, they found them in full view after the fox, which the other few dogs had again brought into their neighbourhood; he was nearly "used up," and the fresh dogs getting laid on, of course sealed his doom; they killed him in five minutes, and the three worthies had the pleasure of being in at the death and "brushing him." They had got so jolly, and were so elated with getting the brush, that it was determined amongst them that, like sportsmen of old, they should have the fox's head put into a can of beer, and then drink it with the head swimming about in it; this was done by way of a "finish," and it says much for their stomachs that none of them were sick after following this old fashion. Mr. Thickset, next day, on his appearing in his usual places of resort, was questioned by his friends as to the reason for his having his eye in mourning; and, putting as good a face upon the matter as he could with his damaged one, he told them that he had had "a devil of a hunt with the Cuttlat hounds, and how he was going to clear on his horse two hedges at once, one on each side of a narrow lane, but which it seems was too much, and so his horse came down and pitched him on a hedge-stake in the second fence, which nearly put his eye out; but nevertheless he was in at the death, although nearly killed himself." This story passed current with his friends, but whether there

was one amongst them who thought it a hoax too good to be kept secret, or whether it was M. Pill Thickset, Esq., himself who wished to see his name in the newspapers, for

"'Tis pleasant sure to see one's name in print,"

we do not know; but whoever it was who composed the very excellent account of the sport, at which no one was present all the time, the local papers are, in the first instance, indebted to him, and in the next place, the Editor of a sporting paper is indebted to him for making that paper the vehicle to distribute this "Pill" (whether Morrison's or Thickset's) to the world; but if it is expected to be swallowed quietly, we are afraid they are in the wrong "box."

## WRINKLES FOR THE GROOM.—NO. XI.

### A GROOM'S GENERAL DUTIES.

The principal duties of a groom may be said to consist of cleaning—strapping as it is called—feeding, and travelling horses. A man should have a certain degree of substance to strap a horse properly; but I do not agree with those who think an Herculean monster, whose blows would almost fell an ox, a necessary article. I have seen light lathy fellows full of muscle and sinew that would half kill one of these plummy lumpy gentry. There is a wide difference between what John Warde used to describe as a man only fit "to strip a horse and starve him," and a clean made light-limbed active fellow. Beyond grooming and feeding, I do not wish for much science in a servant—your pedantic, infallible recipe-fellows are no men for my money. Good strapping, and food proportionate to work, is the grand secret.

Feeding is a matter of observation, and requires study and attention. Most servants are so fond of stuffing themselves that they think horses must be equally so. Stuffing may do with a cart-horse, but will not answer with a hunter or a horse required for quick strong work. Still, how many clowns do we see shovelling the oats into the manger, and stamping as much hay into the racks as ever they will hold! A fellow of this sort is only fit for a drayman. A groom should study each horse's appetite and constitution. Some horses require far more meat than others, but this truism never enters the head of half the fellows calling themselves grooms. Having ascertained the "maximum" quantity of corn master allows, they forthwith prepare for getting it down the horses' throats in equal proportion. A half-finished feed conveys no hint to them: they add a whole feed to it next feeding hour: then horses get cracked heels and swelled legs, and the clown wonders how it happens. They perhaps have recourse to their ante-diluvian book, or some horse-leech in the neighbourhood, who cannot even write out a bill for the medicine he professes to give. I once had a document from one of these fellows, a drunken sinner as ever was seen, composed of nothing but bottle after bottle, and, strange to say, he did not even know how to spell the word bottle, and "to a bottle, a bottle," went all the way down. Unhappy horse that had to take the contents of the "bottle!" Bleeding and physicking should be included in a groom's catalogue of qualifications; but I would never allow either to be done without an order.

Some fellows will say they cannot keep horses in high condition without high feeding; but I am quite sure many masters would ride much more pleasantly if their horses were not in such high condition. What is the use of having a horse capable of double the exertion the rider is equal to? We are not all Obaldaston's, to ride two hundred miles in nine hours; and whether on the road or in the field, I maintain that a horse above himself is a great nuisance.

Half the young fellows that are choked off hunting every season are choked off by the unruliness of their horses. They come out to ride according to some book on equitation, and finding their nags are quite different in the field to what they are on the road, after two or three tears-away and two or three tumbles, they are glad to give in. Had they come out on steady old hunters in good two days' a-week work, and forgot all they had learned in the riding-school, they might have been coaxed along several seasons, to the manifest benefit of their own healths and the advantage of the hunt exchequer.

Feeding is a great point.

Lord Pembroke truly observes, that "it is a matter of the greatest consequence, though few attend to it, to feed horses according to their work. When the work is hard," says he, "food should be plenty; when it is otherwise, the food should be diminished immediately, the hay particularly."

That sentence should be placed in every stable and saddle-room in the kingdom.

Colonel Cook attributes most hunting accidents to improper feeding. "We all know," says he, "it is not an uncommon thing for a horse to get too full of flesh and out of wind after long rest during frost, or from any other cause, and grooms will give their horses the usual allowance of corn, hay, and water, without due regard to their necessary exercise."

The risk they incur applies more to hard riders than timid, or nervous

ones as it is the fashion to call them; and it may generally be observed, that, when Masters of Hounds write upon the condition of horses, they refer to the condition and feeding requisite for servants' horses, which invariably do double the work there is any occasion for a gentleman's horse to do. Servants, too, are not "nervous," and are generally expected to be able to ride anything.

Most stables have a separate system, differing, however, principally in trifles; and an ignoramus going into half a dozen stables, carrying away a wrinkle from each, would find himself in a very confused state at the end of his peregrinations. Some swear by hot weather, others by cold; some by hard rubbing, others by bandaging; some by firing, and others by blistering; some by one thing, some by another; but the best plan is for a master to frame a code for himself, and let others follow him if they like instead of his following others. Jumbling ideas, however, is not the only inconvenience arising from the variety of opinions on stable management, each successive servant attempting to introduce into his new place the arrangements of the last, particularly if they conceive the alteration will be any saving of trouble to themselves. For instance, hay-lofts are abolished in many stables, and cribs are placed in the stable for the reception of a certain quantity of hay fresh from the stack. Perhaps a master, going into his stable a few mornings after a new comers arrival, will find all the left trap-doors pulled open again, and the hero stamping the hay down with his foot. I remember a worse case than this though. A young friend of mine got what he called a swell Melton groom, or, more correctly speaking, a helper out of a Melton stable, and the morning after the new mans arrival, on going into his stable, he found all his horses' switch tails squarred.

In some establishments grooms only open the stables twice a-day instead of three times if the horses are not at work. Instead of sending the horses starving out the first dawn of the morning, they generally remain in the stables till the men have had their breakfasts, and are consequently not shut up till a little before mid-day. They then remain quiet for six hours. The late Lord Kintore's stable was conducted on this principle, and Nimrod, in describing it, said, "I must own that, although I never tried it, I see sound argument in favour of this stable management during the three dark and dreary months of winter, with horses that work hard, from a knowledge of the restorative powers of undisturbed rest both with horse and man; as also of its sedative effects in allaying excitement by whatever cause produced."

The hours of exercising I think might be advantageously left to the weather. Cold, damp, foggy mornings, the horses would doubtless be better in their stables; fine bright mornings should be taken advantage of, lest the day should change for the worse as it advances. I certainly never could see the wit of getting horses out, as I have frequently seen them got out, in winter before day-break, unless indeed the men (which is not at all improbable) had fixed a particular hour for their own breakfasts. That breakfast is one strong argument for exercising at a later period, the men having then no interest in hurrying and shortening their work in order to get home to them.

Some people exercise for equal periods under all circumstances, whether the horse is lying idle or been hunted the day before. I am inclined to think a horse is very much like ourselves, very easy about exercise the day after hunting. To my mind, there is far too much quackery introduced into the hunting stable—too much Tom Penn. If we would treat horses as we treat ourselves, I believe it would be a great deal better for them. Horses have a great deal of discretion. I will give an instance of it. Towards the close of last season—I am almost ashamed to say in the month of April—I was riding one hot morning to meet hounds, and offered my horse a mouthful of water in crossing a brook. Strange to say, he refused it, would not have a drop; but on returning he took a rare swill. Of course the red coat had told him what he was going to do, and he thought he would work better without water.

#### A FEW WORDS ABOUT FALCONRY.

[A week ago, we acknowledged the receipt, from a contributor, of a delightful little book, entitled "the Fama of Norfolk," by the rev. rector of Eccles. We feel assured he will feel gratified by our placing before our numerous readers, an extract or two, inasmuch as many of them must of necessity be precluded from obtaining a sight of the original work.—ED. SPORT. MAG.]

#### ON THE REMAINS OF FALCONRY IN NORFOLK.

 IN former days, Norfolk must have been a paradise to the falconer. Its extensive heaths, for the pursuit of the partridge or the nobler flight at the kite; the interminable ranges of marsh, where the peregrine or the lanner might encounter the heron and the mallard; or the active merlin try his pinions against the speed of the snipe, caused the county probably in those days, as at present, to have high reputation with the sportsman. In the L'Estrange Household-book perpetual entries call to mind this nearly-forgotten science. There are notes of money paid for the keep of the goshawks, which seem to have been periodically sent out to walk, as hounds are at present; there is a charge made to the

knight for a tame mallard to lure the hawks with in Hunstantone marshes. In Blomesfield's *Norfolk* are several notices of hawk service. In the reign of Edward III., Reginald de Dunham, for instance, held the manors of Fishley and Witton, by the service of keeping a goshawk for the king. Landed property is mentioned by the same authority as conveyed by William de St. Clare, to William son of William de Heveningham upon service of a sparrow-hawk. And as for many years, and until very recently, the nearly forgotten pastime of heron hawking was annually practised at Didlington, the seat of Lord Berners, it may not be improper to say somewhat on this subject. Sir J. Sebright in his *Treatise on Hawking*, observes, that the village of Falconswaerd, near the Bois le Duc, in Holland, has from time immemorial, furnished falconers to different parts of Europe. The falconers who brought every season hawks to Norfolk, were natives of this place, and most respectable and intelligent men, fond to a degree of their art, and pleased to give information to any one interested therein.

The hawks requisite (the female Peregrine) were taken in autumn, near Falconswaerd, by a pigeon and a net, with the assistance of the ash-coloured shrike as a scout to announce the approach of a falcon. Their difficulty they said was not so much in the capture of hawks as in a dearth of herons to train them with when taken. The heron on these occasions is caught alive by nooses set on the margin of a water ditch, or spring head, wherever numerous footmarks show that the birds often visit a particular spot.

All the hawks received a certain portion of training, and many were perfect at the time they arrived in Norfolk,—the end of April; the time for sport being whilst the heron has young ones.

The afternoon was the best part of the day, and as herons go forth in one direction or another, according to the wind, one part of the estate or another was resorted to in turn, in what was deemed the most likely direction for intercepting fall herons returning with food to their young, after journeying into the fens for fish.

If it was feasible, the hawking party, which was often numerous, was screened from observation under one of the belts of firs, common in that part of the country; and two falconers on horseback, each with hawk on fist, looked out afar for the coming of a heron. The gathering point for these birds was the heronry, a lofty plantation in the valley; and the distance at which a practised falconer espied a heron returning, was most remarkable. According to the course of the bird, the falconers remained motionless or rode in advance, so as to get nearer the line in which the heron was moving. If they could get within three or four hundred yards, the falcons were unhooded, and swung themselves buoyantly into the air. Here sometimes happened what to a novice seemed a riddle: a falcon to set with advantage, must rise above its quarry, and to do so must make its circles in rising against the wind. Therefore in "climbing to the mountee," as our ancestors termed this evolution, the hawks sometimes appeared going in one direction and the heron in another. But no sooner do they attain the requisite elevation, than they dash forward in pursuit, straining one against the other: the first up with the heron makes its pounce, which, if unsuccessful, sinks it far below. It must climb once more to attain elevation; in the meantime the other falcon makes a sweep, and by the time its effort is over, probably the first is ready for a repetition. As may be supposed from the ordinary flight of birds, space rolls rapidly away during this conflict. High in the air are the three birds,—sometimes almost specks in the distance; and, far behind, tell the horsemen, every head turned aloft, regardless of the rabbit-burrows on all sides, each anxiously straining his optics to see somewhat of the chase, oftentimes in a whirlwind of dust. Three or four miles were sometimes thus traversed. When the fatal stroke is given, generally at the insertion of the neck with the body, the blow is audible at some distance. No words can describe the aspect of a successful falcon, as, trampling upon its prostrate foe, it eats the food presented; for if the bird's behaviour has been good, it is "fed up" by way of encouragement. The form appears dilated by pride and successful daring,—now it fastens voraciously on the meat, and now pulls feathers in its wantonness from the trembling heron, which, with its long neck carefully imprisoned under the falconer's leg, is held down lest its beak should injure the triumphant hawk.

No wonder that a heron which has once undergone this ordeal is worthless for future sport. It shirks in dismay at the first sight of the enemy, disgorges its stock of fish, and very often wheels round and round towards the ground, crying out in impotent anguish, without being touched by the hawk. Some herons were retained to practice the young and imperfect falcons with; the rest were released with a thin brass plate bent around one leg, and the date of capture marked thereon.

Occasionally the Norfolk plover (*Actinopus crepitans*) was pursued, and gave very good flights. The carrion crow also, and the magpie, were in turn objects of sport.

The mews in which the falcons were kept were upon the top of an eminence, at the side of a plantation, in which was a lofty ash; and a flag flying at "The High Ash" was a signal to all the country round that hawking would take place that afternoon.

Great vexation often occurred from the loss of the best hawks by their raking off in pursuit of ignoble game; a wood pigeon, for instance, is a temptation no hawk can resist. Probably natural love for this prey is

made stronger by a tame pigeon being the usual lure for recalling a falcon. I was present one afternoon when the Bull-dog, a perfect phoenix, was thus lost; she had been flown only ten times and had struck down nine herons. The first resource of a reclaimed hawk preying for itself is very often a rook; the Bull-dog was seen to strike down a rook the next morning, by the falconer who was seeking his lost one.

The names given to hawks are sometimes very incongruous. In Colonel Thornton's *Tour in Scotland*, his falcons, if memory serves, were Miss L. McIntosh and Miss McGregor; whilst, as a contrast, his terrels, probably blood relations to these fair ones, were Death and the Devil.

Many years ago, the first time indeed I ever witnessed the hawking at Didlington, just as I joined the assemblage, a cry was raised by several voices of, "bring Mrs. Waddington." Two ladies in an open carriage leaned out anxiously as I was passing, and again I heard, "Here comes Mrs. Waddington,—now we shall see some sport." What could interest all so much in this particular personage I knew not, till I saw the crowd opening, and the falconer appeared, talking to, and caressing the flower of his flock, his favourite bird.

It would be at the present day almost impossible to revive this sport generally: even in the very open country around Didlington complaints and heartburnings arose on account of damage.

#### ANCIENT FEES AND PERQUISITES.

[The following curious regulations are copied from a work entitled "The Ancient Welsh Laws of Prince Hoel Dhu," who lived in the tenth century. They bear date in the year 940.—Ed. Sr. Mac.]

**THE GROOM.**—The chief groom shall have the skin of an ox in the winter, and the skin of a cow in summer, from the steward of the household, to make halters for the king's horses; and that before a division is made of the skins between the steward of the household and the officers. The chief groom claims the legs of every beast that shall be slaughtered in the kitchen, and he shall have salt out of the kitchen. He shall have the king's old saddles and old bridles. The share of two persons shall he have of the money of the grooms. The head groom and the grooms shall have the wild colts which the king shall receive from the third of a spoil. The chief groom is obliged to bring out all the horses which the king shall give. He thereupon shall take fourpence for every horse, except for these three horses; the horse of the domestic chaplain, the horse of the judge of the court, and the horse of the jester.\* The chief groom shall receive from the steward of the household, as much as will fill the vessels used in serving in the court, and as much as will fill the vessels out of which the king drinks, of mead; and the second filling from the patron of the family; and the third from the queen. His land he shall have freely. A horse in attendance from the king. The horse shall have two ratios of the provender. The place of the chief groom, and the grooms with him, is below the pillar next to the king. To him belongs the arrangement of the stabling of the horses, and their provender. The third of the fine and commutation of the grooms shall go to the chief groom. A halter shall be furnished by him with every horse which the king shall give. The chief groom owns the king's cap, if there be furs appertaining to it; and the spurs, if they should be of gold gilding, or of silver, or of copper. He shall have a dish of meat, and a hornful of ale as an allowance.

**THE FALCONER.**—The falconer has a privilege, the day that the hawk shall kill a bittern, or a heron, or a curlew. Three services shall the king perform for the falconer on such a day: hold his stirrup whilst he dismounts; hold the horse while he goes after the birds; and hold his stirrup whilst he mounts again. Three times shall the king compliment him that night at table. On one side of the chancellor he shall sit at the banquet. The falconer shall have the skin of a stag in autumn from the chief huntsman, to make gloves for himself and the leashes of the hawks. Two shares shall his horse have of the provender. He shall drink only three cup-fulls in the hall, lest his hawks should be neglected through his drunkenness; vessels therefore shall hold his liquor in the palace. If the falconer should kill his horse in hunting, or should his horse die by chance, he shall have another from the king. He claims every unfledged young bird; and a sparrow-hawk's nest found on the land of the palace belongs to him. He shall receive a dish of meat as an allowance and three hornfuls of liquor in his lodging. From the time when the falconer shall put the hawks in their mews to the time he shall take them out, he shall not give an answer to any one that shall prefer a claim against him. He shall receive quarters once a year on the villans. From every villain town he shall receive fourpence, or a dry sheep, as for food for his hawks. Freely he shall have his land. Three presents shall the king send to the falconer by the hand of his messenger, except on the day he kills any noble bird, or on the three principal festivals; the falconer shall

receive the presents himself from the king's hands at those times. The day on which the falconer kills a noble bird, if the king shall not be with him, when the falconer returns to the palace with the bird, the king is obliged to rise up to receive him; and if he does not rise, then he shall give the garment which shall be on him to the falconer. He owns the heart of every animal which shall be slaughtered in the palace. Though the falconer be liable to distraint by the law, neither a bailiff, nor a chancellor shall distraint upon him; but the serjeant of the king and the household. A pound is the value of the nest of a hawk. Six score pence is the value of a hawk before mewing. Should she be white after mewing, she is worth a pound. Twenty-four pence is the value of an unfledged young one. One hundred and twenty pence is the value of a falcon's nest. Three score pence is her value before mewing, and whilst in the mew. The nest of a sparrow hawk is of the value of twenty-four pence. The value of a sparrow hawk before mewing, and whilst in the mew, is twelve pence; after mewing, should she be white, she is worth twenty-four pence.\*

**THE HUNTSMAN.**—The chief huntsman shall have the skin of an ox in the winter, from the steward of the household, to make leashes for the king's dogs. For the benefit of the king shall the huntsmen follow the chase, until the first of December; then, whatever they may obtain, until the ninth day of December, they shall not divide with the king. There shall be no legal pieces in the stag of the king, after the first of December. On the ninth day of December, the huntsman shall show to the king his dogs, his horns, his leashes, and his share of the skins. The chief huntsman claims the third of the king's share of the skins; for he is the only man with whom the king shall divide a third. Until the ninth day of December, no one that prefers a claim, shall have any answer from the chief huntsman, except he should be an officer of the court; for none of the officers can delay the cause of action of another, if there be a judge to determine it. The chief huntsman shall have two men's share from those that hunt with the great hounds; and one man's share from hunters with the greyhounds. After the skins shall be divided between the king and the huntsman, let the chief huntsman and his huntsmen with him, go into quarters upon the king's villans; then they shall return to the king at Christmas. The place of the chief huntsman, and his huntsmen with him, is below the pillar, opposite to the king. A horn-full of liquor shall be sent to the chief huntsman, from the king, or from the patron of the family; another from the queen; and the third from the steward of the household. The chief huntsman shall have a tame sparrow-hawk every Michaelmas, from the falconer. He shall have an allowance in his lodging, that is to say, a dish, and a horn-full of mead, or other liquor. To him belongs the third of the fine, and commutation, and heriot, and maiden fee of the daughters of all the other huntsmen, and the two shares go to the king. With the king shall the huntsmen be, from Christmas, until they shall turn out the fallow deer in the spring. From the time they begin to hunt, in the first season, until the ninth day of May, they shall not reply to any body who may sue them, except he should be an officer of the court. His land he shall have freely. He shall receive a horse in attendance, from the king. Two shares shall he have of the provender. Four-pence in law he shall receive from every one who hunts with a greyhound; and eight-pence in law he shall receive from him who hunts with the great hound. The chief huntsman is to blow his horn, when there is a due to him, in the day of spoil; and let him choose a beast out of the booty. He shall have the skin of a cow in the summer, from the steward of the household. Whoever shall sue the chief huntsman, must endeavour to take him on his bed on the morning of May-day, before he puts on his boots, for he is under no obligation to answer, unless he shall be found in that manner.

#### COMPENSATION FOR DAMAGES DONE BY FOXES.

**JAN. 15.**—The rain is descending fast, and so is the barometer: a happy sign for the sporting community. Scent, that *sine qua non* of success, up to the present date, has been glorious, every stable and cover holding. The pointer has found himself on the covey before their instinct apprized him of his propinquity; and the young foxhound has had every opportunity of displaying the "dash" that is to distinguish him in his future career.

A well-known sporting nobleman used to say, at Melton, that after dinner the music he loved best to hear was the clattering of pattens upon the pavement. They told him of open weather; and his mind was made comfortable by the assurance that spurs, and not skates, would be required on the following morning. The rain, too, has arrived very opportunely. There are good accounts of foxes in many of the fast countries; indeed, we have heard that the "damage fund" has already been

\* The falconer is entitled to a palm's length of wax candle from the steward of the household, to feed his birds by, and to make his bed.

† In the middle of February he shall take his dogs, horns, and leashes, and go to hunt fallow deer until Midsummer. Immediately afterwards he is to go to hunt stags, until the ninth of November. After that day he begins to hunt the woodwings (badgers).

‡ His horn is of the buffalo, and its value is one pound. Some say he ought only to swear by his horn and his leashes.

\* The reason why he has it not from a bishop is, because he is the king's confessor, rises before him, and sits behind him, and holds his sleeves while he washes himself. He cannot claim for the falconer, for the king is obliged to serve him on three occasions. He shall make no claim upon the jester; for the halter of his horse is to be tried *circum testes*, instead of his head, in going out of the court.

taxed to a heavy amount in several, which speaks well for the prospect of this season. *Vulpicides*, like thistles, can be kept down, if labour and attention be bestowed on the good plants that occupy the soil. A friend of mine, who was a "sportsman every inch," and who was liberal to an excess in answering the demands upon his "damage fund," for he kept a pack of foxhounds, told me the following anecdote, the facts of which may be relied upon, as he was a man of the strictest veracity:

"Among the many farmers," said he, "who have applied to me for money on account of injury done by foxes to their poultry, Farmer Coaker was the most outrageous. He rented a large but wild estate in the very heart of my country: it was therefore, necessary to be as liberal as possible towards him, as long as he continued reasonable in his demands; but year after year he increased them most alarmingly. At first, a few head of poultry had suffered; then, whole flocks of geese or turkeys had disappeared, and 'the foxes was to be seen running about by day's-light in his barton-yard; and he hoped the squire would bear in mind that he was a friend to foxes, but he could not afford to suffer loss by them.' From geese and turkeys it came to lambs; and yearly did I pay him a considerable sum for the damage which he professed to have sustained. At last, he appeared one day at my mansion, took off his hat, scratched his head, and coolly handed in a bill for a calf, which, he said the foxes had destroyed for him. My blood was up at the imposition, and boiled to think that he took me for a fool; so, kicking him out of my hall, I bade him make the best of his way home, or the foxes would have his cow also." My friend added, that Farmer Coaker never troubled him afterwards; and that a favourite saying of his, when talking of foxes, was, "'tis a nasty varmint, and ought to be shot on a Sunday morning, so soon as of a Saturday night."

As regards the killing of lambs by foxes, for my own part I utterly disbelieve it. Often and often have I heard charges brought against the wily animal, but in no one instance have I heard them established. From the nature of the fox's habits in killing his prey, he deals destruction around him long after his appetite has been satisfied; and were a fox once blooded upon lamb, the mischief that would accrue would undoubtedly be incalculable. No farmer's flocks would be safe except they were watched or penned, for his depredations would be unlimited; and an old fox (for the old ones have this credit) would most assuredly communicate the habit to his younger brethren: whereas, what is the case now?—why, that an occasional lamb is lost, or found mutilated; but rarely, very rarely, are numbers so lost: and when they are, the mischief is attributable to dogs, and not to foxes, though, from the latter's habits, as I said before, when he does get amongst his game, he makes havoc as much to indulge his love of destruction, as to gratify the cravings of nature. Not—dogs are the warriors in almost every instance: and where they are not, then the biped man must be suspected, even before the fox.

The mole is a common prey for the fox—the *Talpa Europea*, that works its arches in the secret passages of the earth. At night, however, when the lobworms are bedewing themselves, then does the mole ascend also; and then does the wily animal capture in his turn the slayer of worms. Though Evelyn and Buffon both hold moles to be injurious animals, yet the injury they do by "disturbing the ear that the roots of the grain" is certainly compensated by the good they do in eating up the destroyers of the grain; and if, as I am well aware, they contribute to the support of foxes, who that is a lover of the wild animal would entrap and pot them, merely on account of the little hillocks which they throw up in the pastures, and which, if properly scattered, would but tend to their fertilisation? A dead mole, placed over the bridge of a trap, is of all others the most destructive bait for a fox: not that he will take any dead bait, but he will be sure to roll upon a mole if placed within reach of his haunts. Poor Charley! multifarious are the means used by that monster man for thy destruction; and briny tears would I shed did I conceive it probable that the above suggestion would fall into the hands of a *Vulpicide* before ignorant of it. But of the wag's friends I stand in no fear: "they are good men and true," and all, all honourable men.

#### MANNER OF SHOOTING THE GREAT GROUSE AND THE BLACK COCK IN RUSSIA.

The manner of shooting the large grouse is founded on the curious trait of its character, which is, shutting its eyes in rapture at its own music, though certainly none of the sweetest; during which ecstasy the sportsman walks boldly on, without fear of alarming it with the rustling of the bushes or any common noise; but should the bird cease to sing, as they call it, he must instantly stop, and stand motionless like a statue, without even venturing to turn his head towards the tree where his game sits, or he is sure to lose it; such is the quickness of its eye and ear when not fascinated with its own note. On the grouse beginning another air the sportsman pushes on without further circumspection, often up to the very tree, and brings down the silly bird.

The shooting of black game or the black cock is of that social kind which collects sportsmen together in parties and was formerly among the favourite amusements of the court.

There are little shooting huts built on purpose in the woods frequented

by the black game, full of loop holes like little forts, when the company watch the assembling of the game on the surrounding trees, dressed out with artificial decoy birds, commonly made of black cloth, with the marks of the natural fowl, and shoot them through the above mentioned openings, without taking the trouble of moving from their seats.

In this manner the company are all lodged in separate parties and huts in various parts of the woods, where there is usually good cheer; consequently they enjoy the pleasure, without the fatigues of the chase; with the additional advantage of society and refreshment, whilst they are waiting for the game.

The black game are not scared away by the report of a gun, if they do not see the sportsman, several of them may therefore be killed on the same tree. If by chance three or four are placed on branches one above the other, the sportsman then has only to shoot the undermost bird first and then the others gradually upwards in succession; as the uppermost fowl is earnestly employed in looking down after his fallen companion, and keeps chattering to it till he becomes an equal sufferer.

THE ROYAL (OR BENGAL) TIGER.—Among the many authenticated instances of this animal's extreme ferocity, we have met with few more frightfully characteristic of his pertinacity than the following. During the rains of June, 1842, a native boatman was paddling in his *dinghee*, off the shore near the estate of Mr. Broadhead, on the "Sunderbuns," he suddenly espied a royal tiger fast making up to him. The poor fellow immediately redoubled his speed, but, finding his adversary gaining rapidly upon him, he became alarmed for his safety, and, abandoning his canoe, plunged into the water. The hungry tiger, however, still continued to pursue him through the water, the man still continued to escape by diving the instant he found his sanguinary enemy nearing him. As the poor fellow rose to the surface for the purpose of respiration, he was capable of perceiving the relative positions of himself and the tiger, and thus continued to keep at a safe distance from his pursuer, until the latter completely worn out and exhausted, and finally foiled in his object, turned back towards the jungle from whence he had emerged. Had the boatman remained in his *dinghee* he would assuredly have been carried off. It is a very common occurrence for *dandees*† to be *puckered*, as it is called, whilst in the act of paddling their canoes in the various rivers, streams, and *nullahs* of the Sunderbuns.

#### The Poetry of the Rail.

Now that the Railways have absorbed every other interest, it is quite impossible that the poetry of the country can any longer hold itself aloof from its all-pervading influence. "The Soldier's Tear," or the "Sailor's Snivel," will become obsolete and *rococo*. Instead of holding aloft snow-white scarfs to flutter in the breeze, we shall have railway signals hoisted by impassioned stokers or ardent engine-drivers, as they pass the cottagedoors of their mistresses at eighty miles an hour, by a special train.

We beg leave to call the attention of our poets, and particularly that of the Poet Bunn, to the new field for imagination which the Railways open to them. Fair girls "met in a crowd," or standing amid glittering throngs, are completely used up, and nothing now remains but the sentiment of the rail; the great trunk-lines being exactly the sort of line that such minds as the Poet Bunn are calculated to adorn and illustrate.

We give a specimen of what we think might be done with such a subject as—

#### THE STOKER'S SIGH.

There was a fair and beauteous girl,  
She lov'd a stoker brave,  
And of a hair a glossy curl,  
That girl that stoker gave.  
He press'd one hand upon his heart.  
The other to his eye;  
And knowing they were doomed to part,  
That stoker heav'd a sigh.

Before the lattice open wide,  
Behold that stoker stand,  
He cries "Wilt be a stoker's bride,  
Wilt take a stoker's hand?"  
The words had scarcely left his tongue,  
Ere pealing loudly by,  
The Railway starting-bell is rung.  
The stoker heaves a sigh.

"Ah, dearest once I us'd to dream—"  
His voice was heard no more,  
The whistle gives its frantic scream,  
The engine gives a roar.  
The stoker hurries to the train,  
They're off! away they fly;  
He heaves the coals, for 'twould be vain  
Just now to heave a sigh.

\* The vast delta of many islands in the estuary of the Ganges.]

† Native boatmen.

**THE MAMMOTH HORSE. — MR. Carter's Colossal Horse** continues to attract crowds of visitors, but as he will positively leave town in a few days for America, Mr. Carter begs to remind those persons who have not yet seen this remarkable animal, aptly termed the "Model Horse," that the present time is the only opportunity they will have of viewing the largest horse in the world. Count D'Oraay says, "he is a magnificent animal." The Mammoth horse is 20 hands in height, and weighs 2,500 lbs. He will be exhibited at the Egyptian Hall, Piccadilly, from 11 a.m. till 9 p.m. Admission, 1s.

**TOM THUMB SONGSTER,**  
Containing Eighty Songs.

Nos. 1, 2, 3, 4 of this now popular Song Book are still on sale.

No. 6 contains, by permission of Miss Eliza Cook, Thirteen of her best songs, together with Forty other Songs, and a neatly engraved Portrait of this talented Lady

[Now Ready, Nos. 1, 2, and 3 of

**THE LONDON GENERAL RECITER,**

Containing some of the best Recitations, Comic and Sentimental Extracts, &c. No. 3 contains Sixty-four Pages of beautiful print, Two Engravings, and a Portrait of Mr. Phelps, as Kola.

**EVERY MAN HIS OWN HARNESS MAKER.**

**THE DURHAM DUCIE HUNTING AND Travelling Knife.**—J. R. Durham, Manufacturing Cutler, 261, Regent-street, near Portland-place, begs to call the attention of sportsmen, sportsmen, and all persons in the habit of riding or driving, to his newly invented knife, by means of which, harness of every description can be effectually repaired in less than five minutes; the knife itself containing every requisite for the purpose. Also, to his harness mending apparatus, without the knife; this article is so very compact, that it can be carried conveniently in the waistcoat pocket, and is particularly adapted for the use of persons travelling post, stage, or gentlemen's coachmen and omnibus drivers.

By these inventions the great inconvenience which unavoidably takes place when an accident happens to harness, and to which the very best is liable, is effectually prevented, as the delay need now never exceed from three to five minutes.

"Mr. Anson begs to acknowledge the receipt of Mr. Durham's letter of the 30th ult., and to acquaint him that he has laid the knife, with which it was accompanied, before Prince Albert; and his Royal Highness is much pleased with the ingenuity of Mr. Durham's invention."

Disqualified horses not drawn.—Prize go with the stakes. Draw nights, Tuesdays and Fridays.—Post-office orders to Mr. N. F. Okey, Hero of Waterloo Inn, Waterloo-road, London. N.B. These sweeps will be drawn as soon as full, and the tickets forwarded according to the address given.—The prizes will be paid the first Tuesday after the race, less five per cent. If any horses should die or be disqualified prior to the draw, the amount will be deducted from the starting money, as above.

N.B. A 10s. 6d. Sweep is expected to fill every month.

**UNDER ROYAL PATRONAGE.**

Perfect Freedom from Coughs in Ten Minutes after use, and a Rapid Cure of Asthma and Consumption, and all Disorders of the Breath and Lungs is insured by

**DR. LOCOCK'S PULMONIC WAFERS.**

The following particulars of Rapid Cure of Asthma, of Fourteen Years' Standing, are from Mr. J. E. Bignall, Holyhead-road, Wednesday, and addressed to Mr. Ladbury, surgeon there:—

Sir,—When I had the first box of Dr. Locock's Wafers from you, I was labouring under one of those attacks of Asthma, to which I had been subject now for about fourteen years. I have had the best medical advice the neighbourhood could afford, including two physicians at Birmingham, and one at Wolverhampton, but with no success. My breathing was so very difficult, that I expected every inspiration to be my last. As for sleep, that was impossible, and had been so for several weeks.

The first dose (only two small Wafers) gave me great relief—the second more so. In short, the first box laid the groundwork for the cure, which only four boxes has effected and I am now quite well. I remain, Sir, your most obliged, G. E. BIGNALL.

The particulars of hundreds of Cures may be had from every agent throughout the kingdom and on the Continent. DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 3d., 2s. 9d., and 11s. per box; or sent free by post for 1s. 6d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bride lane, Fleet-street, London. Sold by all Medicine Vendors.

**THE EARL OF ALDBOROUGH**

**HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Massina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY.—

SIR,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment in case of any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout the CIVILIZED WORLD, at the following prices:—1s. 1ld. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 16, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., G3, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcers, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, nervousness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

**PERRY'S PURIFYING SPECIFIC PILLS** price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter), £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure. At 106, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deansgate, Manchester, on Mondays, Tuesdays, and Wednesdays.

## WRINKLES FOR THE GROOM.—NO. XI

## ON THE BREEDING AND TREATMENT OF HORSES.

The difference between a good and an indifferent—much less a bad—groom, if not acknowledged by every sportsman, is apparent from the trim of his horses. It is necessary that he should be a man of observation, or he will never be enabled to make the most of his master's stud. The act of letting a horse go to hounds when not fit to go may cost his life, or at least disable him, and may be his master, for the season. His surest guide in this case—taking for granted that he has been doing strong work beforehand—is the state of a horse's excrements. Both his dung and urine are indications of the state of his body, and ought to be narrowly watched. If the former comes from him in hard and dark coloured knobs or pellets (which he knows is not occasioned by his provender) and also deficient in quantity and slimy, he is not in a fit state to endure a run, without great risk of fever. In fact, fever, more or less, is at that time present, but which a mild laxative ball would remove, and he will be ready on the fourth day. All inflammatory symptoms in the horse should be checked as soon as possible, for they always leave behind them debility which it takes some time to remove. His urine should likewise be noticed. If he pass small quantities at short intervals and highly coloured, he may depend upon something being wrong—some inflammatory symptoms at hand. These should direct the groom to examine the mouth and the eye, and the pulse if he is acquainted with the nature of it, which will inform him of the extent of the mischief; and he may rely on it something is going on wrong in the stomach, intestines, kidneys, or liver, which a "stitch in time" will make right.

Clipping the hunter is still in great repute, and has gained converts among some of its most strenuous opposers. At first sight it certainly does appear an outrage upon nature, but experience proves that a horse is not only easier and sooner dressed, but will also do more work when clipped than when with an indifferent coat upon him. Of course it is only a remedy for woolly coated horses and such as are liable to break out after cleaning. Some grooms still hold out against it, alleging that they should be ashamed to clip a horse of which they have the management all the year round; but the generality of them are too well aware of the saving of labour to themselves to object to the system. Some resort to singeing, which, though more expeditious and capable of modulation, is neither so effective nor does the horse look so well after it. The expense of clipping varies from one guinea to two. The clipper living at the expense of the clippee. Powerful and good helpers are very necessary in a hunting stable. We remember seeing a famous sportsman reject the proffered services of one because "there was not enough of him." A lazy helper is a great evil, and there is nothing tries the muscles more than an hour's work at a horse. We remember once asking a groom how he liked his new helper. "Oh," said he, "he is only fit to strip a horse and starve him." The circulation of the horse's blood is likewise much increased by a good dressing, but there is a period when the brush should be very sparingly used. Of course we mean the moulting season. Indeed we know a hard rider who insisted upon his groom confining himself to the wisp and the rubber, during that ticklish period. With horses that have been summered on grass it is one of great debility—even low fever—which is best counteracted by high keep and an occasional tonic ball. A chill taken at this time too often proves fatal, or at all events lasting, and hence the precaution of a moderate use of the brush.

**BEFORE HUNTING.**—Much discrimination and judgment, founded on a personal knowledge of the various constitutions of horses, are requisite to be put into execution on the day previous to hunting, and more especially in the fast countries. We have always been of opinion that, compared with the race-horse, the hunter has been most shamefully neglected in the due preparation for his work. It is well known that, with the former, one sweat or one gallop omitted loses him his chance for a race, and if known to the betting world sinks him many points in the odds. But the hunter too often goes to cover whether prepared or not. "I shall ride Darlington to-morrow, John," says a young one to his groom, without ever asking the question whether Darlington be fit to go; and John is too much afraid of losing his place to hint that he is not fit. Thus thousands of hunters either fail in a run, or give up the ghost after it,—or, perhaps, what is worse, are attacked by fever in their feet. We insist upon it, that no horse should be taken to meet fox-hounds, with the view of riding him fairly, that has not been doing very strong work, up to the very eve of the hunting day, and a strict regimen in his stable observed. This, however, must be regulated by circumstances. In the first place, the distance in the morning should be taken into account. If considerable, he may leave his stable with a comparatively full belly to what he should be indulged with if the fixture be near to home. Veterinary surgeons assure us, that in the former case we need not be afraid of allowing a liberal supply of water to a horse on a hunting morning—indeed double the quantity recommended by Nimrod, viz. six or eight swallows, or go-downs, as grooms call them. But on this point we must yield to circumstances. Some horses are much given to throw off their meat either on their road to cover, or at the sight of the first red coat, and to such half a pail of water would be injurious.

Thick winded horses also cannot go with loaded intestines, and must be kept short of both hay and water, previously to meeting hounds\*. We are far from approving of the general use of the setting mangle with hunters, but without its use, hard feeding horses that will eat their litter, when they have consumed their proper allowance of food, are always dangerous to ride. There being no limit to their appetite, they eat until they can eat no longer, and it is impossible they can go upon wind until most of that food be thrown off, which cannot be done before a first fox is found.

We are great advocates for a good rattling gallop, on the day before hunting, and if for half a mile against a hill, as the term is, the better. We are convinced of the necessity of the pores of a horse being well opened by sweating on the eve of a good run, although he may be in what is called strong work. Suppose, for example, he has had a fair day's work on the Monday, and comes out again, if not on the following Saturday, on the following Monday. He certainly ought to have his vessels relieved of the redundancy produced by so many days' highly exciting food, and much rest—to say nothing of perhaps a little over-excitement of his whole system from the effect of the last day's work. Although it is desirable that the person who takes him to cover should be light, yet it is still more so that he should be steady, and he should not travel at a slower rate than six miles in the hour. Long continued walking is a waste of time, and injurious to the backs of horses; and if a hard road will lead to the place of meeting, it is desirable to pursue it, even should two miles in ten be saved by crossing a dirty country, through bad cross lanes, and more especially bridle roads. Independently of the saving of labour by travelling above ground, instead of fetlock deep in dirt, a hunter is less excited by taking a high road. In the spring of the year, we have usually sent our hunters an hour before the time necessary to take them to cover, and give them a feed of corn at a neighbouring public house. At all events they are certain to stale when this plan is pursued, which some refuse to do in the field; but shutting them up for an hour must greatly refresh them, if they should have come ten or twelve miles to meet hounds, and we often send them further in spring. On hunting mornings, the men should be in their stable at cock-crow.

It is not every groom that knows how to put a saddle upon a hunter, and this is a matter of much importance, especially with one which carries a heavy man. It should be placed as near to the shoulder blade as possible, without interfering with its action. Sportsmen are now for the most part aware of this, which accounts for the very common use of the breastplate, which in our early days was only put upon light-carcased hunters, and considered one of the symptoms of a delicate and washy constitution. The fact is, no horse that has to leap fences should be girthed tightly, and most hunters have deep fore-quarters, which gives a tendency to throw the saddle backward, in the act of following hounds over every description of country, although they might never (as the term is) slip through their girths. For this reason, a breastplate should be rather tight than otherwise, more particularly with welter weights, for nothing can be more distressing to a horse than to have any part of his burthen over his loins, which is the weakest point of his body, whereas the union of the shoulder with the chine is the strongest. A slack breastplate is also dangerous, as when the part that extends to the girths hangs loosely, it is possible for a horse to be turned upon his back at a fence by a strong stake, or the top of a rail-post, getting into it, and such accidents have happened. As to the objection to a tight breastplate—that it prevents a horse extending himself in a leap, that vanishes when we recollect, that the fore legs of a horse are not more extended then than when he gallops, and also that the "D" loops of the saddle would yield to any strong resisting force, such as would in this instance be required to produce the dreaded effect. As to bridles, there is no positive rule to

\* We make the following extract from the Veterinarian, partly to show the liberal credit the conductors of that periodical have given to the practical observations of—compared with themselves—an unlettered sportsman, but more particularly so to present to our readers their opinion on giving water to the hunter before work. After quoting from Nimrod on that subject, they proceed thus:—"We hope our readers will not find fault with us for the length of these extracts. They contain facts and truths, deduced from observation and experience, with which every veterinarian ought to be well acquainted. In risking the want of this practical sporting knowledge, he risks with one of his best customers—the fox-hunter—no less than his medical reputation: while, on the other hand, possessed of it, his employer will give him credit for being a good veterinary practitioner. We have hardly a remark to make further on these valuable extracts; unless it be, that we do not find our own mind so full of apprehensions of giving water on the morning of the hunting day, as sportsmen in general are known to be. If given—to double, or even treble the quantity prescribed by our author (Nimrod says six or eight swallows)—at the hour and under the circumstances he particularizes, we should not ourselves look for any ill effects from it, knowing as we do how speedily the greater part of it will pass off through the kidneys. Five or six hours is a long interval for an animal of the nature of a horse to go without any thing; we are inclined to think that he must feel somewhat languid from the fast by the time he is called upon to commence his day's work." We leave our readers to take the benefit of these observations upon watering the hunter; but we should not do justice to our experience were we to conceal our apprehensions of the effects of twenty-four go-downs, or swallows, on a good-constituted horse as well as upon one of an anxious temper, given to throw off his meat, going to cover.

be obeyed, experience being our only sure guide. We may, however, observe, that many horses are irritated by the bits not being wide enough between the cheeks. The single snaffle is now become rare in the hunting field, in consequence of the increased pace, add to which, not more than one horse in a hundred is fit to be ridden in a snaffle after he has gone twenty minutes, best pace, after hounds. With hunters given to rush at their fences, the nose-band may be used with effect, taking care however, that the pressure on the jaw be not too severe.

### THE PIGEON, ITS HISTORY, MODE OF BREEDING, REARING, AND KEEPING, WITH NOTICES OF THE SEVERAL FANCY VARIETIES.

THE STOCK-DOVE.

## SECTION I.—INTRODUCTORY.

HIS pretty and well known bird is recorded in earliest history, as an inhabitant of every climate, save those immediately near the poles. It prospers abundantly in all temperate regions, but in a still greater degree near the tropics, no heat being too high for its naturally ardent constitution.

The wild pigeons of cold countries are said to emigrate towards the south on the approach of winter. Pigeons exhibit a satisfactory proof of the superiority of the civilized over the savage or mere natural state, in their multitudinous increase and endless varieties, in a state of domestication, under the fostering care and all-subduing art of man. From their peculiar beauty and innocence, they have always ranked among the chief feathered favourites of mankind; and in the eastern countries, the original sources of religious superstition, the dove has ever been a great object of veneration, as an emblem of something divine.

But to proceed to a far more material point—the national profit of encouraging the breed of pigeons to any great extent, has long been the subject of much dispute, M. Duhamel, the apologist of these beautiful favourites, I apprehend, has not been a successful advocate. He avers that pigeons do not feed upon green corn—that their bills have not sufficient power to dig for seeds in the earth, and that they only pick up scattered grains which would else be wasted, or become the prey of other birds. From the season of the corn appearing, he says, pigeons subsist upon the seeds of weeds, the multiplication of which they must, in consequence, greatly prevent. Another writer has of late introduced a story of the farmers in a certain district in England, who, finding their corn and pulse crops greatly reduced, attributed it to the vast quantity of pigeons kept among them, which, on such account, by a general resolution, they agreed to destroy. A few seasons afterwards, it seems, they found their land so exhausted, and their crops so eaten up by weeds, that they came to a general wish for their pigeons back again. Now this is either a lame story, or the farmers implicated were very lame farmers, as being ignorant how to weed their land, without the assistance of instruments, the use of which must cost them so considerable a part of their crops.

No man, in the least acquainted with country affairs, but is fully aware of the immense damage done to the crops of corn, beans, peas, and tares, that is to say, the grand articles of human subsistence, by pigeons. Our best practical agricultural writers may be consulted on this head, but a sufficient proof of the fact is the reduction of dove cots throughout all countries where agriculture is best known, valued, and practised. Indeed, the feudal laws in favour of these birds, were a most cruel and fertile source of oppression. Every one will judge for himself of the degree of credit to be given to the following statement, extracted from Mr. Vancouver's survey of the county of Devon.

Pigeons often fly to a great distance for their food, and when they can find corn to eat seldom prey upon any thing else. They begin to eat corn

about the middle of July, and rarely want the same food at the stacks, or in the fields, until the end of barley sowing, which is about old May-day, and which includes a period of two hundred and eighty days, or better than three quarters of the year; the rest of the time they live upon the seeds of weeds and bentings. It is somewhere stated that, in England and Wales, there are twenty thousand dove houses, averaging each at about one hundred pair of old pigeons. We will take this estimate at three-fourths, which will equal one million, one hundred and twenty-five thousand pair of dove-house pigeons in England and Wales. These, to speak moderately, will consume, with what they carry home to their young, one pint of corn per pair daily, and which, for one hundred and forty days, being half the period they are supposed to subsist upon corn, amounts to one hundred and fifty-seven millions, five hundred thousand pints of corn consumed annually, throughout England and Wales, by these voracious and insatiate vermin, for in no other light can they be considered by the agriculturist. The amount and value of this consumption, when brought into the present price of wheat, rye, barley, oats, beans, and peas, and assuming that an equal quantity of each corn is thus consumed, but which is far from being the case, as wheat is not only the most inviting, but by far the most exposed to the ravages of these birds, both at seed time and preceding harvest, will stand thus—157,500,000 pints, equal to 4,921,875 Winchester bushels, which, at 6s. the bushel, the present average of the grain before enumerated, amounts to 1,476,562l. 10s. value of the agricultural produce of the country consumed in this manner. To which is to be added, the irreparable injury committed by pigeons in seed time, by picking up every grain of seed, wherever they alight, and the corn trod under and beaten out by their wings before harvest, not to forget the real damage they do to buildings by pecking the mortar from between the bricks, a mischief which may, however, always be obviated by the constant allowance of a salt-cat, which will also take their attention from the garden to which they may be otherwise destructive.

Thus much of the general habit, now of the varieties.

Buffon enumerates upwards of thirty varieties of the pigeon, which, according to the usual systematic plan, the convenience of which, perhaps, is rather more obvious than its accuracy, he derives from one root, namely, the stock-dove, or common wild pigeon. All the varieties of colour and form which we witness, he attributes to human contrivance and fancy. There exist, nevertheless, essential specific differences in these birds, which seem rather attributable to the nature of the region, soil, or climate, to which they are indigenous, than to the art of man.

The stock-dove, or original of the pigeon genus, in its natural or wild state, is thus described; of a deep blue and ash colour, the breast darkened with a fine changeable green and purple; the sides of the neck of a reddish gold colour; its wings marked with two black bars, one on the quill feathers, and the other on the covert; the back white, and the tail barred near the end with black. The ring-dove is yet held by naturalists to be distinct from the stock-dove, and it would seem that the turtle-dove is equally so from both.

In this country the blue dove-house pigeon is the most common, and the only wild species are the ring-doves, or wood pigeons, and the turtle-doves, which are to be found in all parts of South Britain, breeding during the spring and summer, and retiring to the deepest recesses of the woods, in the winter season, whence, probably, the turtle has been supposed to emigrate.

But both in the ancient and modern world, this beautiful and variegated genus of birds has been cherished by man, as a source of amusement, and of gratification to the eye, as well as of profit, in the article of provision for the table. Among certain of the nations of antiquity, moreover, pigeons were held sacred, and their lives no one dared assail. The useful qualification of messenger, appertaining to the Asiatic and African species of the pigeon, is of high antiquity; and we read, in the time of the Crusaders, of an Arabian prince, who had a sort of telegraphic communication kept up in his dominions, through the instrumentality of pigeons, which carried letters, and were regularly relieved at the appointed posts. From those, doubtless, the breed celebrated in Europe, under the name of the carrier, has proceeded.

The pigeon is monogamous, that is, the male attaches and confines himself to one female, and the attachment is reciprocal; the fidelity of the dove to its mate being proverbial. Young pigeons are termed squeakers, and begin to breed at about the age of six months, when properly managed: their courtship, and the well known tone of the voice in the cock, just then acquired and commencing, are indications of their approaching union. Nestlings, whilst fed by the cock and hen, are termed squabs, and are at that age sold and used for the table. The dove-house pigeon is said to breed monthly, being well supplied with food, more particularly when the ground is bound by frost, or covered with snow. At any rate it may be depended on, that pigeons of almost any healthy and well established variety, will breed eight or ten times in the year; whence it may be conceived, how immense are the quantities which may be raised. Stillinger asserts, that fourteen thousand seven hundred and sixty pigeons were produced from one single pair in the course of four years. To class things of similar bearing together, it has been calculated, but I know not by whom, or on what practical ground, that a single pair of rabbits may, in the same portion of time, namely, four years, produce one million, two hundred and seventy-four thousand, eight hundred and forty of their kind.

(To be continued.)

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD V. 1811—1837.

## CHAPTER I.

JACK RANDALL.—(Continued.)

## THE FIGHT.

Round 1. The positions of the combatants were extremely elegant, both appeared in good condition, but, if anything, Parish seemed the heavier man. Neither seemed eager to strike; and, notwithstanding the acknowledged excellence of Randall, considerable time elapsed before the attack commenced. At length the Nonpareil got his distance, planted a body hit with much dexterity, and got away. He was not long in giving his adversary another, when Parish returned, but not effectively. Considerable time again occurred in sparring, till a favourable opportunity offered for Randall, when he let fly at the Waterman's nob, producing the claret in a twinkling, and got away with the agility of a dancing master. The Nonpareil stopped in a masterly style, and showed his superiority by finishing the round in a winning manner. Using both hands equally, the left being applied to the body of his opponent, while the right hand put in so tremendous a hit on the head of Parish, that he fell forwards on his face. [Great applause. Eight minutes and three quarters had elapsed, and 4 to 1 was offered with as much *sans froid* as if the blunt was of no value.]

2. Randall, notwithstanding the decided advantages he had obtained, like a skilful general, seemed to think discretion the better part of valour. He was as cautious as if no blows had passed, and again waited for a good opening. The attempts of Parish were frustrated, and Randall, with the most smiling confidence, again bodied his opponent. The already damaged mug of the Waterman was again peppered, and the crimson flowed copiously. In closing, the Nonpareil showed himself completely entitled to his appellation; he got Parish's head under his arm, and fished him severely till both went down.

3. The admirers of science were completely tired before any work was attempted, so much time elapsed; and the downright partisans of the old school of fighting, when milling was the order of the day, began to treat this sort of boxing rather contemptuously. In fact Parish was so fatigued that he put down his hands. At length the combatants became more in earnest, and Randall finished the round most successfully. He planted a severe throtter, when Parish returned, but not heavily. Some blows were exchanged, and the Waterman so cleanly hit one of Randall's peepers that he made him wink again; the Nonpareil soon returned this favour with compound interest, and made the Waterman bite the dust! [Uproarious applause. In this round Randall cut the knuckles of his left hand against the Waterman's teeth.]

4. The head of Parish, from the profuse colouring it exhibited, showed the handy works of the limner, but his confidence was not in the least abated. On setting to he was nobbed without ceremony; he also received, in the course of the round, a body hit, that sent him staggering away from his opponent. The returns of Parish were ineffective; and, in closing, Randall showed the amateurs the practical advantages of fibbing; for he here portrayed a feature peculiar to himself in this respect; when tired with one hand he changed it, then worked with the other, till Parish was thrown undermost. The gluttony of the Waterman was acknowledged by all present, and science was allowed him; betting, nevertheless, was at a stand still, so certain did the event appear to be.

5. This was a sharp round; Parish appeared to more advantage than heretofore. The left hand of Randall was much lacerated, nevertheless, in this painful state, did not prevent him from doing its execution. In closing, Parish met with a heavy fall, and was undermost.

6. The Waterman scarcely ever attempted to strike first, had he done so, in all probability a greater chance might have presented itself. In one or two instances he lost nothing by commencing the attack. In closing a desperate struggle took place to obtain the throw, after fibbing had been administered; Randall got him down and rolled over him.

7. It was evident Randall was the strongest man—the best fighter—superior on his legs—knew how to shape himself for every situation he had to encounter; in short, he appeared a complete master of the art of war. Some hard milling occurred in this round, and Parish made some good hits; but he could not turn the scale. Randall put in a bellier, and got away; the Waterman followed him in the gamest manner, and never showed anything like flinching throughout the fight. Randall put in a desperate hit in the Waterman's neck, then laughed, and nodded at him. In closing, both down. The friends of Randall were under some alarm, from the quantity of blood he had lost from his left hand; and a medical man of some eminence, who was among the spectators, was rather apprehensive it might produce fainting.

8. Randall was not to be got at, and he distinctly took the lead in this round; Parish gave him a sort of half-arm hit in the mouth. Both down.

9. On setting to Randall drew on one side to void the claret from his mouth; but this was the most effective round in the fight. It was singular to view Randall, hit, hit, and hit again, till the Waterman went down on his back. [A guinea to a shilling was laughed at.]

10. In this round the Waterman appeared conspicuous.—He got Randall into the corner of the ring, and put in a body blow, that made the Nonpareil wince again; in fact, he reeled a little, and had it been heavier, it is likely he must have gone down. But the recovery of Randall was excellent, he got out of his perilous situation in the masterly style of a consummate tactician, and the marks of his left were seen imprinted on the belly of his opponent. After some little traversing the ring, Randall was again in the corner, when it was curious to observe the mode he took to obtain distance;—he leaned his body back quite through the ropes, and planted, by this means, a heavy hit on the Waterman's mouth, that soon gave him an opening, when he came laughing out. Some hits were exchanged, and Parish, with much dexterity, hit Randall under the ear, marking him. The Nonpareil now gave his man no quarter, and, in closing, he threw the Waterman so desperately, that his shoulder was nearly dislocated. This was the most effective round in the fight, and Parish received considerable applause.

11th and last. The Waterman was entitled to every consideration, from the manly manner in which he contested every round. Although he did not gain much by in-fighting, he should have tried it at an earlier part of the fight; he could not have been worse off. In out-fighting in this round, he was fairly beat to a stand-still; and although he endeavoured to stop scientifically, his altered face was again punished. In closing he received the usual severity; and, on going down with his brave competitor, was not able to meet him any more at the scratch. The shouts of victory were loud and lasting, and the Nonpareil was carried out of the ring in triumph. The battle lasted 38 minutes.

The capabilities of Randall, in the ring, were so evident that comment is scarcely necessary. What the most skilful master of the sword exhibits with his weapon, Randall displayed with the fist. His mode of fighting did not appear to originate from the common advantages of tuition; it seemed completely intuitive, and looked more like a natural gift, than resulting from the minutiae of art. Randall gained nothing from chance blows; and rarely ever made a hit without its proving effective. If his blows were not stopped, his distances were so well measured, they are sure of arriving at their destination. It was asserted he never hit past the head of his opponent; and though considerable time was lost in the caution observed before he struck, it was amply repaid in his coming off victorious without punishment. However unpleasant it may be to state, the positive fact is, Parish had no opportunity of turning the battle in his favour; it was all on the side of Randall from the commencement to the end; but, notwithstanding this remark, Parish must be allowed to have sustained the character of a bottom man, and a good fighter. Although his face received such tremendous punishment, his peepers were never closed, and he showed himself, on the same evening, at the White Hart, on the Bromley-road, quite chuffy, refusing to be put to bed. The absence of Mr. Jackson was a severe loss to the combatants; particularly to the losing man, who, in this instance, had not one single farthing collected for him.

The milling qualities possessed by Randall were most decidedly exhibited in a turn-up with M'Carthy, on Monday evening, April 6, 1818, as they were relaxing their cares at Tom Reynolds's free and easy club, in Drury-lane, where the conduct of M'Carthy tending to interrupt harmony, he was called to "order" by Randall. M'Carthy, who is a stone heavier than Randall, defied his power, accompanying his defiance with some marks of contempt. Argument not being the forte of either of the men, an appeal to the fist was decided upon, as the fairest and quickest mode of putting an end to the dispute. The formalities of the ring were adhered to, notwithstanding the confined space of the room; seconds and bottle-holder were also not wanting. In the course of fifteen rounds, occupying twenty-five minutes, the nob of M'Carthy was so charnoered, that "the fight" was completely hit out of him. One of Randall's peepers was rather blackened, but in other respects he retired from the contest scarcely anything the worse for the row. The head of M'Carthy was terrific—he had not the slightest chance of victory. Harmony restored—the clouds were again in operation—the chaunts too, thrown off in all the gaiety of "a bit of life," and a drop of blue-ruin obliterated all thoughts of the interruption which had occurred, and the lads of the fancy concluded the evening in all happiness.

To conquer Randall seemed the enviable object of all the light weights; a new customer accordingly offered himself, of the name of Burke, from Woolwich, for 100 guineas a-side. He was a fine, strong young man, taller than Randall, and possessing great confidence in his own abilities. Burke was also thought highly of by the officers at Woolwich, from the capabilities he had displayed in two or three bouts, and he was backed without any hesitation; indeed, his friends had quite made up their minds as to his success. Equally confident were the partisans of Randall; as to himself, he viewed this contest with perfect indifference; in fact, victory appeared so easy to him, that he scarcely underwent the usual preparation of training. The day arrived, Tuesday, June 16, 1818, when the battle was to have been fought at Moulsey Hunt, but the magistrates interfered. Combe Wood was the next bit of turf selected for the contest, when a second interruption occurred from the presence of the beaks. However, this dilemma was soon got rid of, and the parties made the best of their way towards Wimbledon Common, followed by the anxious cavalcade. The ring was made in a twinkling, and Burke, followed by Oliver and Clarke, as his seconds, entered the ropes, and threw up his hat. Randall immediately after repeated the token of defiance, waited on by Paddington Jones and Dick Whale. Seven to four on Randall.

## THE FIGHT.

1. Burke appeared an active, fine young man, and in good condition. He was anxious to go to work, and soon let fly: Randall also to, and closing, the Nonpareil got his opponent's camister under his arm, and served it out, as a clown in a fair operates on a salt box; when tired, he threw Burke. [Rare chaffing from the Murphies, and 2 to 1.]

2. Burke was not quite so eager; he found more caution and a little sparing necessary. Randall again felt for his nob, when the claret peeped, and first blood was declared for the Nonpareil. In closing both down.

3. This was a short round, Burke falling from a slight hit.

4. Burke could not protect his nob; in fact, it was in complete chaos, and he had no idea of getting it out. His head was quite altered; and in a close, both down, but Burke undermost.

5. More chancery practice on the part of Randall, and played off upon his opponent's nob, without any return. Randall again got Burke down.

6. This was a severe milling round; and Burke showed Randall that he must not be treated with careless contempt lest he might prove a dangerous customer. Burke again went down in a close, undermost.

7. Randall stopped well, but did not display himself to so much advantage as in his previous contests; he appeared more bent upon running in, and pulling his opponent down, than decisive hitting. Both down, but Burke undermost.

8. All fighting: and Burke, it was thought, had rather the best of it.

9. Burke, very cautious, tried to make the most of his science, but went down.

10. This was a sort of scrambling round, catching hold of each other, and Randall had not only worst of it, but in closing, was down and undermost. The Woolwich boys were all alive, and gave Burke a lift, by singing out, "Burke for ever, and you'll win it now, if you mind what you're arer."

11. This round consisted principally in sparring and hugging, till Burke was thrown.

12. Confidence, in a boxer, is a most essential requisite; but he ought always to be prepared for his enemy. No strange pugilist ought to be looked upon indifferently, as he may, in the trial, turn out a good one. Burke was rather a difficult man to be got at, from his length and height; which it seems, accounts for so much hugging. Burke was thrown.

13. Similar to the last; disapprobation expressed by the spectators.

14. Randall, in closing, got his opponent's nob upon the fibbing system, but Burke gained the throw, and Randall was undermost.

15. Randall did not make a hit, but rushed in, and got Burke down undermost.

16. Of a similar description.

17. After a few exchanges of no importance, Randall put in a tremendous hit on the neck of Burke, and he went down. [Applause.]

18. In this round, if Burke did not absolutely frighten the friends of Randall, he convinced them he was a better man than they took him to be. The Nonpareil put in a heavy hit on his opponent's nob, which Burke tremendously returned with interest upon Randall. The former also put in four heavy hits on Randall's head without receiving any return. In closing, a sharp struggle occurred, till both went down. [This altered the face of things a little, and the betting dropped. The Woolwich boys were all shouting at the success of their hero.]

19. Quite unexpected, Burke had also the best of this round. In a sort of hugging close, both went down. [Great shouting for Burke.]

20. Randall now went to work sharply, and gave his opponent a tremendous flier; but Burke returned the compliment with interest. Some sharp hits also occurred, till both went down. [7 to 4, and 2 to 1 on Randall.]

21. Burke resorted to science, but his nob was again in chancery; and the punishment it exhibited was terrific. In closing, both down.

22. It was evident now that Burke was going—he appeared extremely weak, and went down from a slight hit. ["It's all your own, Jack," and 4 to 1, but no takers.]

23 and last.—Randall seemed as if he was determined to wind up the contest with a grand climax. The already punished head of Burke again received three additional tremendous hits upon it, that gave it the poly-poly; and, in closing, Randall threw his opponent with the utmost indifference. When time was called, Burke could not come, on account, it was said, of his having dislocated his shoulder. It was over in three quarters of an hour.

This contest did not exactly please the friends of Randall. It was thought he had been too careless, or that he entertained too light an opinion of his opponent. He, however, made some skilful stops, which were much admired; but it was said, he won the fight more from throwing, in the first instance, than from his usual method of hitting. It should be taken into consideration, that Randall had something to do in getting at his opponent, who possessed the superiority of length of arm and height of stature; and, in all probability, he would have fought for several rounds more, if his collar-bone had not been dislocated. Randall, as usual, retired from the ring with scarcely a scratch about his face.

The Nonpareil had disposed of all his opponents with so much ease and certainty, that the sporting world appeared extremely anxious that Turner should enter the lists with him; an opinion being entertained that the latter was the only boxer of the light weights that would have any chance of defeating Randall. The superior tactics, and other pugilistic requisites displayed by Turner in his victories over Scroggins, had rendered him an object of great attraction among the fancy in general. Randall was also anxious to fight Turner, by way of a finish to his efforts; in fact, the Nonpareil delayed commencing Publican on that account alone; and two or three good houses had in consequence slipped through his hands. Randall was confident, in his own mind, as to the result. Victory, and nothing else, appeared certain to him. This, however, was by no means the general opinion; but when the following meeting was announced between the above parties, the fancy were all alive on the subject:—

Articles of Agreement, October 13, 1848, entered into at Mr. Franklin's the Lion and Goat, Lower Grosvenor Street, Grosvenor Square, between John Randall and Edward Turner, to fight for the sum of 100*l.* a-side, on Tuesday, the 1st of December. The above battle to be a fair stand up fight—half-minute time, in a twenty-four foot ring. The place to be named by Mr. Jackson; but the distance from London not to be less than twenty-five,

nor to exceed thirty miles. Randall, on the one side, to choose his own umpire, as to a time-keeper, and Turner also to appoint a time-keeper, on his part; but, to prevent any disputes, Mr. Jackson to appoint a third umpire, as a referee, whose decision shall be final. The whole of the stakes to be made good on Tuesday, the 10th of November, at Mr. Franklin's, between the hours of seven and nine in the evening; but if either Randall or Turner wish to increase the sum to 200*l.* a-side, this latter sum to be made good on Tuesday, the 24th of November. Mr. Jackson to hold the stakes, or any person whom he may appoint. A deposit of 20*l.* a-side was placed in the hands of Mr. Franklin; but if the whole of the stakes of 100*l.* a-side are not made good on the 10th of November, the above deposit to be forfeited accordingly. (Signed) BAXTER. FRANKLIN.

Randall was the favourite generally; but among the "tight Irish Boys" he was warmly supported. Yet Turner was by no means in the back ground; for the Taffes swore, "Oot splutter her nable, but's sure to win it." The cool knowing ones, who put national feelings out of the case, and who only looked to winning the blunt, declared it was a puzzling problem.

This great match being made, Randall went into training on his favourite spot, Hampstead Heath; where he was rather under the eye and superintendence of a gallant Colonel, his patron, it being contiguous to the above officer's residence. Randall took up his abode at Bob Pich's, the Horse and Groom, Hampstead, which was a centre of attraction for the fancy; it being only a toddling distance from the town.

On the side of Turner, his friends were equally attentive and alert, and a Game Dianer was given to the amateurs on Tuesday, November 24, 1848, at the Chequers Inn, at Brentwood, Essex, preparatory to the grand combat. It was a numerous and most respectable meeting. A gamer dinner was never witnessed; and the cloth was covered from one end to the other with hares, pheasants, partridges, and venison, served up in the highest style of culinary perfection: the table was also surrounded by live game, of the true British cast, not to be equalled, in any other part of the world. Oliver and Parcell on one side; and Turner and Richmond upon the other. The harmony was of the richest quality, and "the heroes of the ring" were toasted by the company. Turner returned thanks for the mention that had been made of his former exertions, and obsequed, with much modesty and candour, "that he would win if he could; but, if he lost the match, he trusted that the amateurs would not have to complain that he had not done every thing to give them satisfaction."

In consequence of the death of the Queen Charlotte, this great match was put off, by the consent of all parties, till Saturday, Dec. 5. This circumstance tended, if possible, to increase the sporting anxiety upon the event. The day being altered, it was thought expedient, by the backers to prevent any misunderstanding, to give publicity to the following:—"It may be necessary to inform those who are not thoroughly acquainted with the rules of betting, that, on account of the above day being altered, all bets that have been laid since the match was made are off, unless agreed by the parties to be on; but all those bets which were laid before the match was made, stand good." It was even betting at Tattersall's on the Monday previous to the fight. This circumstance was attributed to the Welsh seeking upon the subject: 5 to 4 was difficult to be got. The above contest being a war theme, the Stock Exchange dabbled considerably upon the event. When the challenge was first given by Randall, and received by Turner, the odds were 7 to 4 and 2 to 1 on Randall; but this seemed rather to arise from the impetuosity and confidence of his friends, than from a due estimate of his real merits. Consideration soon reduced the odds to 5 to 4, then 21 to 20, and at length only Randall for choice.

Even betting followed; and at last Turner's friends, who had been upon the reserve, began to show out, and actually offered 5 to 4 the other way. This change was attributed to a report that Randall had got a cold in his neck, and was under the necessity of having leeches applied to reduce the tumour which arose in consequence. Turner's father, it appears, had offered to take the odds against his son to any amount, and actually produced the blunt for a few hundreds, in order to prove his sincerity. The spirit of the Ancient Briton was up, and, we understand, that he was instructed by his friends in Wales to support the national glory. Tom Belcher had 200*l.* sent up to him from Wales, to bet as he thought proper upon Turner.

The little hero, on his leaving Brentwood, dined at Belcher's, in Helborn, on Thursday, and in the course of the evening set off for Croydon, where he slept that night. He seemed in high condition and good spirits, and expressed a perfect confidence of success. Randall also shifted his quarters from Hampstead, and approached the scene of action. He was equally sanguine.

On Friday morning the bustle among the fancy was great. Post-chaises, gigs, carts, buggies, waggon, and every description of vehicle, were called into requisition; and, in the course of the day, the road towards Croydon presented a motley assemblage of persons of all ranks. Many, too, who could not master the means of other conveyance, depended upon their pedestrian qualities, and set out on foot. Every horse on the road was engaged, and hundreds were forced to take up their lodgings under circumstances of no ordinary privation;—indeed, it was considered but a trifling sacrifice, when compared with the pleasure to be derived from being present at the fight.

## Reminiscences of Racing and Racers, in 1845.

(From the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 568.)

The last day of the **NEWMARKET SECOND OCTOBER** opened with a match between the Cobweb colt and Comrade, even weight, which ended in favour of the former, easily. There was a Handicap Sweepstakes of 20 sov., over the T. Y. C., won by African, in which Evenus and Adrianople broke down; and another of 15 sov. each, over the same course, won by Astern, two years old, in which Paultons was second, Attorney third, and Nereus fourth. Prologue, giving weight, beat Deodara easily. For the race for the Prendergast Stakes, George the Fourth, Paragon, by Touchstone, and Wit's End were thoroughly beaten: Ennui was first to the cords, and then resigned to Princess Alice. Oakley, giving weight, beat Hartshorn. In a 10 sov. Sweepstakes, Malvoisie shewed off at first, but was beaten by Caen, Deer Chase, and Dr. Hill. Thus terminated the meeting, the weather throughout being milder and more agreeable than had ever been recollected. The Baron was betted very freely against for the Cambridgeshire, and certainly those parties who backed him, upon opinion, to win the race, acted most injudiciously; the result proved him to be anything but first-rate.

The **CURRAGH OCTOBER MEETING**, Oct. 14th, is out of my latitude, altogether. It was recorded, however, that Alice Hawthorn won a race there, but was thoroughly beaten in another by Wolf Dog and Mermiad. In a two years old race Pay-the-Way beat Harkover (D.) and General Tom Thumb.

At **NORTHALLERTON**, Oct. 15th, the Hydra colt beat Benevolence, Inglewood, and Fitzwilliam, for a 10 sov. Sweepstakes: your readers will bear in mind the Hydra has been in a 80 sov. selling stakes, and ought not, therefore, either to esteem him or those he has beaten. The Gold Cup, after a fine race, fell to Jinglepot, beating Little Hampton by a head, Godfrey, Winesour, and that once-landed horse, the Era.

There are some races before the Houghton, Oct. 27th, which I may probably let you have a communication upon. The only one I recollect of consequence is the Chester Autumn Meeting, but should I find enough to fill a page I will send it by way of postscript.

On Oct. 27th, then, may be said to have commenced "the beginning of the end" of the racing season for 1845. In a Sweepstakes of 100 sov. each, Captain Phœbus ran well, beating Khorassan, Lord Saltoun, Devil-to-Pay, Beaumont, Millden, and two others. Fair Charlotte won a 25 sov. Sweepstakes over a similar field; a filly by Touchstone, out of Languish, shewed very badly. A large field of horses, not one of which can be esteemed a good one, but Alarm, started for the Cambridgeshire Stakes; Jet had a slight lead at first, but the character of the race soon changed itself by Event taking a strong lead, with Yardley and Best Bower joining suit. Alarm came at about half a distance from home, and went in an easy winner; Event, second; Yardley, third; Best Bower, fourth; and a lot, including Elemi, Chertsey, Flattery, and Espoir, claiming to be fifth; the three first only were placed. The Baron in this race carried 7st 9lb, and yet was beaten by Espoir, Elemi, and Flattery, the second of these named being, as I believe, as sad a specimen of a race horse as can be found. In a match Refraction, giving 3lb, beat Prologue. Alamode, giving weight, beat Hawkesbury. Lord Glasgow's Retriever filly beat Mr. Herbert's by Elis, out of Tesane. In a 50 sov. Sweepstakes, over three miles, for two, three, four, &c., years old, Clumsy beat the Little Vulgar Boy, the Pet colt, the Pretender, the Hydra colt, Flash of Lightning, and Alena, all two years old; Metal, Misdeal, and Tipoe. Lord Powlett's Montreal colt beat Tit-Bit, Sharpshooter, and Pawnbroker, for a 10 sov. Sweepstakes. Terrier beat the Miss Whip filly in a match, giving a stone, easily. A Handicap Plate of 200 sov., was won by Boarding School Miss, over a large nomination, of which seven, at least, including Alice Hawthorn, were drawn. The Criterion Stakes were run for at a strong pace and Sting may fairly be said to come in with flying colours; he beat Toy (his former competitor, successful then as it now appears by a ruse) easily; Ennui, and Science, the Crown Prince, Buttress, Dulcimer, the Stockport filly and Malt (who has fetched it is said a high price since; he was third); there were others in the race, not bearing very much on the events to take place in May, at Epsom, and it is difficult to conceive how Sting can be in worse position, than from that day he has been in, for the Derby. Motilla beat Black Cat in a match and Anna Bullen beat Blanchie; a race which brings Science, or rather her powers within our knowledge; for your readers will recollect that Science beat Blanchie, but Anna Bullen has been beaten by some not very good ones. A Handicap Plate was won by Alamode over a good field, Alice Hawthorn and Master Stepany as well as Ruf among some others being drawn. Collingwood, in a match, beat Astern; these matches are ominous to me; he may run, but I doubt it, for the Derby.

Blackbird (Chester to come) beat Terrier and a lot of middling ones, Nell Cook, third, for a Subscription Plate of 50 sov., T.Y.C. In a Sweepstakes of 50 sov., Skeleton shewed he was alive, beating Colleen Bawn, Khorassan, and some others, including Alamode; Devil-to-Pay, as was to be expected, being dead lame at Egham, broke down. For a Match, giving 6lb, Idas beat Ould Ireland, though not very easily. The Nursery Stakes induced a good deal of betting. In a 10 sov. Sweepstakes, two years old, Astern beat Subscription, Science, Anna Bullen, and Needle. In a Handicap Sweepstakes 10 sov. each, Dexterous beat Chandelier, who beat Terrier, the Pet colt, Miranda, Flash of Lightning, Tit Bit, and Alexa. Alamode won another Sweepstakes, beating P'sumont, Espoir, Metal, and some others. Secundus, receiving weight, beat Garry Owen. Wolf Dog, receiving 2st., beat Oakley. In another 10 sov. Sweepstakes, rather a sharp race, Chandelier beat Ohio, Killcrankie, Lady Anna, Deer Chase, the Montreal colt, and Sharpshooter. I cannot say much for the last named in any race I recollect. The Glasgow Stakes occasioned a good race, and eventually, for there was a dead heat between three, Binnacle was placed first; Radulphus, second, and the Mecca colt, bolting in the second heat, third; Arkwright was in this race as well as Prospect, without, however, any advantage. In a match between Bishop of Rochester colt and the Stockport filly, out of Mountain Sylph's dam, the latter broke down, much to the disappointment of the Squire. In a Subscription Handicap of 50 sov., the Baron was drawn and two others, and it was carried off by Little Hampton, beating Naworth and the old mare, Alice Hawthorn, who carried but 8st 12lb. In another 10 sov. Sweepstakes, here was sport, Killie Krankie beat Deer Chase, Sharpshooter, Benevolence, Subscription, and a Montreal filly. The Queen of the Gipsies had the best of it with Captain Phœbus, Caen, Example, Dean Swift, Stitch and Titmouse. I find I must finish here; I will give the rest of the Houghton, &c. and some general observations in my next, the concluding, paper.

(To be continued.)

### TO CORRESPONDENTS.

**J. SHEERWIN.**—Does the act now in force relating to billiards and bagatelle apply as well to the licensed victualler as to coffee and cigar shops, and if so, what is the amount of a licence, and where is it to be paid for?—Our correspondent may obtain full information at the Licensed Victuallers' Protection Society's office. Licensed victuallers are exempted from the operation of the act, consequently do not require a licence.

**IGORAMUS.**—Mr. John Gully, was born August 21, 1788, you can therefore reckon his age. He was beaten by Pearce, the Game Chicken, and beat Bob Gregson twice. See his memoir in this Magazine, for all particulars of his career.

**S. L. T., Desborough.**—You say you are "an admirer," "a subscriber," and all that sort of thing, pray add to these "a reader," and then you would not ask us to repeat what we have already printed. See Nos. 20, 21, 22, 23, for answers to your questions.

**A. E. D., Liverpool.**—The following is a remedy for worms in the dog:—Make up a ball with a portion of glass, finely pounded. It is a groundless fear to suppose that this will in the slightest degree abrade or injure the internal surface of the stomach. But if you shrink from the experiment, try the following:—Cowhage, half a drachm; tin filings, four drachms. Form into four, six, or eight balls, according to size of dog, and at the end of three days, (having given one a morning,) administer a mild mercurial purgative, or small doses of Epsom salts, daily for three days. Oil of turpentine is a common medicine, but often produces great constitutional disturbance.

**W. MAY, Drury Lane.**—The Penny Postage came into operation on the 10th of January, 1845.

**F. G.**—The lowest point of the thermometer last year, 1845, was according to the Farmer's Almanac, in January, and that was eighteen degrees and some fractions. As to Zero, we have seen nothing like it in London, or its vicinity, for some years past. The lowest temperatures in the table of Mr. Whistler's, (see Farmer's Calendar for 1845, page 61,) since 1783, is opposite 1802, when the thermometer stood at one degree, and in 1821, when it was down at zero, in the same month. The latter is the only case of its being so low for sixty years.

**M. N. S.**—Dick Cain of Leicester, was born in August 1819. His fighting weight was 9st 10lbs. He was beaten by Charley Jones of Manchester. He beat Ned Adams (last) in Feb. 1841. He pleaded guilty on an indictment for riot and assault; but no sentence was passed.

**EDWARD SIMMONS.**—No such match was ever in serious contemplation; nor was money down for Caunt to fight the late Charles Freeman. Anybody who knows anything of pugilism, must know the money would have been a gift to Caunt.

**DON.**—A higher price would, of course, enable us to improve in quality of paper and size of sheet, but all are not so liberal as our correspondent, and if the **SPORTSMAN'S MAGAZINE** were raised to 3d., (however proportionate the increase in excellence) those acquainted with the trade know full well, that we should have a PENNY, and perhaps also a THREE-HALFPENNY opposition started to divide a sale already insufficient to be remunerative. There is a vast number who will look out for cheapness, and it behoves us to steer the course which will secure the most extensive circle of subscribers. We append our correspondent's other query, as it may meet the eye of some experienced canine pathologist:—"A favourite and valuable pointer bitch whelped in May, 1845; soon after (in a week) sores appeared upon her, rose to a head, discharged matter, and left a scab, and healed. They have again broken out; and from their continually scratching have produced a sore, similar to the red mange, with the exception of it being first in pimples. They are in excellent health and condition, and apparently likely to make valuable dogs. Any information will oblige.—Yours obediently, DON."

### OUR WEEKLY CALENDAR.

**SUNDAY, Feb. 8th.**—SEPTUAGESIMA SUNDAY.

**MONDAY, 9th.**—Newmarket Coursing Meeting.—Whitehaven ditto.—New Corn Law introduced, 1842, (its repeal proposed by its author, 1845.)

**TUESDAY, 10th.**—Mills of Wandsworth, and Frost of Holloway, run four miles, for 10L a side, Ham Common.—Pickering Coursing Meeting.—Bewick ditto.—Queen Victoria married, 1840.—Hayes Steeplechases, (two).

**WEDNESDAY, 11th.**—Hereford Steeplechases, (five), and on the 12th.—Newcastle-on-Tyne Coursing Meeting (and 10th).

**THURSDAY, 12th.**—Lanark and Renfrewshire Coursing Meeting.—Predictions: This month umbrellas will be brisk, and machintoshes lively. A rise will take place in water-butts, and cistern balls will be looking up. Puddles are likely to be decanted into boots; we should therefore advise pedestrians to keep their soles well corked; and commissions are given to hunters to survey fies, in order to ascertain if they are waterproof. If you are anxious to provide yourself with a light coat get a bill discounted, and take twenty per cent. in sherry.

**FRIDAY, 13th.**—Morpeth (Ogle Champion) Coursing Meeting (and 14th).

**SATURDAY, 14th.**—Valentine's Day. General penny-post delivery, and anniversary of the "BELLES LETTRES." Nine out of ten prove, however, to be mere billy do's. Keep your kettle boiling, and unwafer suspicious two pen'orths; you have the privilege of returning them.

THE POACHER.—FROM A PICTURE BY ALKEN.

**R**EALLY here have we been keeping this snow-scene on hand, till there seems no hope of a seasonable fall of the earth's "winter mantle;" so, lest spring should come and catch us ere we have presented this variety of out-door recreation—here it is!

Poaching, no doubt, both in itself and its consequences, is a very sad offence, for it tends more or less to spoil—

"To spoil, sir, that manly, invigorating, and exciting amusement, battue shooting—to spoil a sport so entirely free from selfish or interested motives; a sport that, in its practice, binds still closer the lords of men and manors with those intelligent and independent set of gentlemen, who 'speak when they are spoken to, do as they are bid,' vote the right way, and hurrah at the right place."

For it tends, as we were saying, more or less to spoil—

"That good understanding which should ever exist between landlord and tenant, tenant and peasant, peasant and pheasant; that feeling of mutual confidence between those born to till the land, and those bred to feed on the fat of it; and to weaken that fine old English maxim, which declares that the heirs and the hares, as the indefatigable Hibernian ventured to intimate in his second epistle to Miss Coutts, "were made for each other."

Once more, we repeat, poaching tends to spoil—

"The reliance on regular wages, the sweet rewards of honest industry, and the *mens conscia recti* of earning five shillings a week and living on it; while, on the other hand, it encourages the breed of beershops, shifty scamps, and shepherds' dogs."

There, now, in the face of all orders, rules and precedents, have we suffered those three gentlemen—the enthusiastic sportsman, the philanthropist, and the political economist, to take the very word out of our mouth; and yet, were there ever such far-fetched erroneous impressions, such party pleadings, or such wilful perversions! Why, here is a man at our elbow a real practical man, one Mr. Worley, a crack correspondent of the *Times* newspaper, who strikes right at the heart of the offence, and adds an equally able remedy. Hark to Worley!

"There, my dear sir; you must know as well as I do, that's all stuff and nonsense those fellows have been talking about, or at any rate of but secondary importance: Attend to me now. The grand objection to poaching is, that it spoils—hang that hollow jargon about sport, good feeling, and honest industry—it spoils the *sale of game*: nothing more or less; and here's the plan to put a stop to it: let no magistrate or magistrates give a tradesman a licence to sell game, without his then and there agreeing to buy all he requires of that magistrate himself, or some other brother on the bench."

That, and that only, in the opinion of—Worley, Esq., of some place in Buckinghamshire or Hertfordshire, should be the law of the land; and

yet, if we recollect right, some confounded foreigner had the impudence to call us a nation of shopkeepers!"

"Want a licence do you, Stephens?"

"If you please, your worship."

"Hem—well—what do you say to me and my friend Fitzgiggins here? we'll supply you as well and as cheap as any house in the county—an immense stock always on hand, orders executed with punctuality and despatch, and a liberal allowance made to those who take a quantity."

While, of course, every "stately home in England" would sport a board over the grand entry to this effect:—

#### "THE TRADE SUPPLIED."

But Mr. Worley, after all, is merely mortal man, and only one among the many ready with advice gratis, a few of whose opinions we shall take the liberty of collating for the benefit and edification of the newly-appointed committee.

In the first place, then, we have Mr. Bright, who, according to his own account, "being no sportsman, and knowing nothing of rural life," must, in a *parliamentary* sense, be peculiarly qualified for taking the lead in any inquiry of this sort. Friend Bright so remarkable for his mild manners and measures in and out of the house, who sums up to the effect, that this dreadful crime of poaching, with its concomitant disadvantages, can only be suppressed by the total abolishment of corn laws, game laws, and country gentlemen.

Next on the list we have Mr. Grantley Berkeley, all for striking remedies that must come home to the feelings of every one; an honourable gentleman who seasons a great deal of sound sense with some little personal prowess, and no little personal vanity, and who winds up his orations with just the least touch of the brogue: "By the powers, then, Mr. Spaker, sure the way to keep such chaps peaceful and quiet is to have a rig'lar row with every mother's son of 'em you clap eyes on!"

As number three, we call up Mr. Coroner Wakley; and here we would especially direct the readers attention to the grand and selfsame object he and Mr. Berkeley are for obtaining, while the ways by which they would strive to arrive at it could scarcely be more adverse to each other.

"Whenever I fell in with a poacher," says the latter, "I always made it an invariable rule to fall out with him by giving him—a punch on the head."

"Now," says the learned member for Finsbury, "whenever I fell in with a poacher, I always kept in with him by giving him—a leg of mutton."

And here we repeat from these apparently "strange contradictions" we hold under our thumb and finger the grand secret for the senators to work upon—no matter whether we have it in hard blows or hard meat,

the only effectual plan for bringing a poacher caught in the fact to his senses is to give him—

"In charge," says the rural police.

"Six months imprisonment," says the senior magistrate.

"With hard labour," adds the parish overseer.

"The rights of man, by doing away with rights of trespass," says Fergus O'Connor.

"Leave to go away this time, and he'll never do so no more," says the unhappy wretch himself.

By giving him—

"A BELLYFUL," shout Messrs Berkeley and Wakley—a bellyful, Mr. Editor, in your very largest type; while the honourable members throw up a half-crown as to how he's to have it—whether the head keeper is to go directly and fetch the poor fellow a plate of beef, or a—punch on the head.

Notwithstanding, however, the apparent novelty of Mr. Wakley's system, it is not altogether original, as the following story, the heads of which we heard or read of some time since, goes far to prove: A gentleman who, in Mr. Berkeley's classification of poachers, would stand by or for the swindling blackleg, having taken out a certificate without any good grounds for so doing, possessing, in fact, no grounds at all of his own, started like another Columbus to look for a country, and found himself, after his second shot, face to face with one of the natives, who, not knowing how his antagonist might stand bullying and blackguarding, drew it out "mild."

"Are you aware, you sir, that you are infringing on the law of the land?"

"In what manner, sir?"

"What manner, sir? Why my man, sir: they are all my manors in this neighbourhood."

"Indeed, sir. Well, I am sure all I can say from what I have seen of them, they are very good manners, and I trust will set up to the old rule which proclaims in reference to their effect on us—*non sinit esse ferus*."

"Yes, yes; O yes, that's all very fine I dare say; but I—n it! I'd only ask you what you would do if you saw a fellow blazing away right in the middle of your best shooting?"

"What would I do?"

"Aye, what would you do if you were in my place?"

As you ask me, I'll tell you exactly what I think would be proper and gentlemanlike conduct on my part on such an occasion: I should, for the first move, ride up to him in much the same civil style you have accosted me, and after learning that he didn't know where he was, or on whose property he had strayed, proceed in something like this strain:—

"My dear sir, the heat of the sun at this time is very oppressive; the rain we had last night has rendered it very bad walking, particularly in these turnips; and really you look very much fatigued. My house, sir, is in that clump of elms you see yonder, and I trust you will favour me so far as to walk up and refresh yourself with some cold chicken and a glass of Madeira, which, as I said before, after the exercise you have taken, I'm sure you must be in need of."

In something the same manner, with some such seemingly ironical and equivocal greeting, does Mr. Wakley salute his poacher:—

"Eh! what, I've caught you at last, have I, my fine fellow?—what'll you take to drink?"

But, joking apart, this gentleman must have had what the legs would call very capital hedging; whenever he was in want of anything to eat or drink—entertainment perhaps would be a better term, out he started to trespass on Mr. Wakley's preserves or generosity—M. or N., whichever the case might be. If he met with the game, he filled his bags; if he met with the squire, he filled his belly, with this understanding, that in the latter case a blow-up preceded the blow-out. We should like to see Mr. Harry Hill square a book on better terms.

Still the grand question remains unanswered; for our own part, as to actually putting a stop to poaching, we certainly think Mr. Berkeley's, though a two-handed game, by far the more efficacious. "Poaching," we are told over and over again, "generally arises from a want of honest hard work," which, from what we ourselves have seen of the practice, we are readily inclined to believe. Poaching does arise from a want of honest hard work; and we will tell you where, to the greatest extent, this said want will be found—in the poacher's own proper person. The want of beer, bacca, or character, of self respect or respect to his superiors, are all inferior to this grand ingredient in the making of a poacher.

Let us, however, suppose that a man, without the very necessities of life, is, in his extremity, forced to the field for food; the tools he requires for such work are not to be had by whistling for, excepting perhaps the dog; but then, though the dog may answer his call, he can't altogether answer his purpose. The flint again he may certainly find, while the very name of the steel suggests a no very expensive mode of obtaining it. On the other hand, there's the charge for the charge to be considered: if he has no shot in the locker, he is not very likely to get any into the belt; and though powder has been said to go off spontaneously, we can't say we ever heard of its coming in that fashion. Last of all, there's the gun, or, as he so aptly designates the one in his hands, "the fouling

piece"—the wretched pauper horrified to see his family without firing, goes and buys fire-arms for himself, and deserts his own Mary to spend his nights in the company of some Brown Bess, whose terrible attractions must hurry him on to sure and speedy ruin.

Another word as to another of his companions in arms—a poor man, a very poor man keeps a dog—why?

Because (a bit of the brogue here again) he can't keep himself.

Yet what advantage can the dog be to him, since the legislature has forbid his being worked like a horse? The poor man, well aware of all this, takes him from the truck and puts him on the track, turns from drawing carts to drawing covers, and walks complacently enough from Scylla slap into Charybdis!

## THE TIME FOR BEGINNING FOX-HUNTING.

THE period for the commencement of cub-hunting varies exceedingly: in some countries, where the limits of the hunt are not extensive, and the foxes rather scarce, the covers cannot be broken until the middle of September; but in many others it is the usual custom to begin the first week in August, or at any rate as soon as the corn is sufficiently cut to allow of it. By a book published some years since, entitled "The Operations of the Belvoir Hounds," it appears that, in the year 1808, his grace the Duke of Rutland commenced as early as the fourth of July; and Mr. Maynard began during some seasons on or about the fourth of June.

In the north the harvest is always, of course, much later than in the midland and more southern districts, even when the season may be genial; but the close of the year 1833 and the commencement of 1840 presented scenes which few of the oldest of our contemporaries can, I suppose, remember. In December, and also in the January ensuing, it constantly occurred in the Holderness country, while hunting, to pass through fields of beans and oats, in which the farmers were employed in leading or carrying them.

Even supposing the corn to be cut, few packs could begin so early as that, as the necessary destruction of young foxes would be far greater than most countries could afford. But when the number of the litters in the Belvoir country which were returned averaged about sixty-five or seventy, and during some seasons the number of foxes which were killed amounted to nearly seventy brace, two or three brace having been murdered in a morning in the early part of the season, we cannot wonder at there being some impatience to commence operations. In the East of Yorkshire, which is far too extensive for any one pack of hounds to hunt regularly and impartially—the foxes are so numerous that the whippers-in and earth-stoppers are frequently employed, during the frost and snow, in digging and destroying them in places which are ill calculated for sport. How different is the system in other parts, which it is needless to mention, where there is scarcely a litter of cubs which is not put down in the summer, and which have not found their way either from Mr. Herring's menagerie in the New-road, or from Mr. Baker's celebrated shop in Leadenhall-market, to the cost and detriment of other hunting countries. Fox-dealers may lie and humbug as much as they like about only selling foreign and Welsh foxes, but it is a well-known fact that all are fish which come to their nets.

The sooner you can begin after the corn is cut the better, as it gives hounds so much an advantage when the foxes are not come to their full strength; a good beginning is half the battle, and that is one reason why it is generally recommended to wait for a shower of rain to cool the covers and improve the scent. Work of the right sort, added to blood, is what is required; one without the other is of little avail, and where good luck forsakes you, cubs scarce, and the great desideratum cannot be obtained by fair means, others must be resorted to, let them be what they will, to gain the point; however, anything in the world is better than turning out a bagman, the scent of which is as different from the natural smell of a wild fox as a red herring is from a fresh mackerel. The ill effects which the custom of indulging hounds with this apocryphal kind of blood produces will soon discover itself, if frequently put in practice; hares, cur-dogs, &c., will be all alike to them, and their hurry and wildness in drawing will be no less manifest than their unsteadiness in chase. Even foxhounds which have before been steady, after too much rest frequently become wild and ungovernable. Some years ago, when Lord Middleton hunted Warwickshire, and whose celebrated pack stood as high in the estimation of fox-hunters as any in the world, a most unfortunate occurrence took place, and which is a convincing proof that during any part of the year when the pack are not at work, they cannot have too much strong exercise. After a long and severe frost, the hounds met at Walton Wood, and having forced a fox into the open, were running him with a good fair scent, when suddenly they changed his line for that of a dark-coloured red dog (which had no doubt been coursing him), and fairly ran into him and pulled him to pieces before any one could get to them to stop them.

A misfortune of a similar nature befel Mr. Corbet's pack in the same county, namely, Warwickshire, and Will Burrow, the huntsman, found out the mistake, in time to stop them, before they killed him. The cur ran a footpath, through 8 or 9 stiles in succession—a thing which a fox

never does, if he can find a mense in the hedge by which he can make his way. Stile, gate, and flights of rails are his aversion. As Will jumped the eighth stile, he exclaimed: "They're running a dog, by God! no fox would go through a line of stiles like this!" He was right, and stopped the pack in time to save them from such a disgraceful finish.

## ON THE EFFECT OF WEIGHT AS APPLIED TO HORSES, AND A FEW RACING WRINKLES.

(From the *Sporting Magazine*.)

However impolitic (not to say impossible) it may be to try horses repeatedly enough to come at their best attributes in point of weight, distance, and pace collectively, it should not deter us from getting as near this great desideratum as circumstances and the well-doing of the animal will allow.

Suppose having tried a horse four miles under seven, eight, and nine stone, suppose that, so far as time goes, we have found out at least one thing, that he can carry a moderately high weight at a telling pace and a long length. This, as I before said, has at all events proved that we have a horse that we can depend upon for a particular kind of race, and that he is consequently a very useful one. The term *useful* may appear an inappropriate one (to persons unacquainted with racing matters) as applied to a race-horse: it is, however, quite in character. Men of very large fortune (and I, if thus circumstanced, should be one of the first to do so) may keep race-horses solely for the pleasure they derive from the very harmless, I may say laudable, emulation of possessing and producing the best of the most beautiful animals in nature, and feel a truly English and perfectly gentlemanlike pride in seeing their horses win, quite independent of the advantage of pecuniary gain: but as not one man in a hundred keeping race-horses continues long on the turf with merely such inducement, the term *useful* as applied to a race-horse is as applicable as it would be to any other horse where his services were devoted to making money, or at all events to the endeavour to do so. Useful is therefore properly applied to that description of horse, racer or cart-horse, that in the long run appears most likely to put money in his owner's pocket; and as a race-horse, I consider the horse that can make the running is the one most likely for a continuance to do it. In the first place, these from-end-to-end horses are generally such as can come out very often: their getting older is not so much against them as it is against the flyers, as the increasing weight will not stop them, as it unquestionably will sligher and more speedy horses; and further, we have it in our power to make the race such as to suit the stout horse. We may, till a horse's qualities are known, sometimes coax or humbug others into making slow running; but so soon as it is found a race so run is the forte of any particular horse, it can be done no longer. But we can always go away with a horse, unless in a very particular case, where a boy might get shut in by three or four old Jocks; though even then it would be difficult to prevent his shortly getting out: and again, boys are seldom put up on such horses as I instance. We cannot make other horses follow, it is true; so much the better; they would be welcome to go what paces they liked; but if they cannot stop our horse, it is all that is wanted, and we are making the running that suits him, while we are making the pace throughout such as does not suit the others. There can be no doubt but flyers stand a chance for the Derby; my useful nag does not. I must here quote a school-boy reminiscence; "Gutta cavat lapidem, non vi sed sæpe cadendo." My nag cannot win a great Stake perhaps; sed, sæpe currendo, he picks up the crumbs that fall from the rich man's table. These put together make at all events a penny-roll. The flyer has a chance for the big-leaf; it is true, but a hungry man would feel rather faint in waiting ten years to get it. The Derby and Leger are fine takes-up I allow; but if we look at the number of flyers that are bred, entered, and trained for them, I should say that with ordinary luck they would fall to each nominator's share about once in a century. Some have won them several times; so some have made money by gambling: a good many more have been ruined, and perhaps as many have committed suicide from, as ever made their fortune by, it. Of course when I speak of a useful horse, I do not mean a slow one; but, as speaking comparatively, I mean he would be slow if put by the side of (we will say) *Semiseria*, or any other goer, in a half-mile race. Fast for two or three miles as to the time it takes to do the distance in, and fast in finishing, are two quite opposite qualifications. My useful horse must be fast, or he cannot cut down his horses so as to bring them comparatively slow at the finish; but if he is this, I should consider him a safe horse to back when properly placed, and a most useful one to own.

It may be asked why such horses as (we will say) Bay Middleton might not go on running as long as the more useful sort? They might, it is true; and much better would it be for their owners if they did: but they *don't* (speaking of course in a general way.) They might perhaps go on if their age did not; but we cannot stop that, and its consequences stop them. They are not generally formed to go long lengths or to carry weight, both of which they must do when they become older, or not run at all, or only, as I have before said, for Handicaps.

I have stated the numberless trials it would require to exactly ascertain what (taking all things into consideration) is a horse's true forte,

and I quite feel convinced this is scarcely ever ascertained. We get perhaps with the generality of horses a sufficient insight into their qualifications to partially answer the purpose: with many I am sure we do not, and with some their very best pace is never known. To elucidate this I will suppose a case—begging it to be borne in mind that I am not supposing, and still further am I from proposing, the kind of trial I shall mention as one practicable, or at least judicious to attempt with a race-horse, for the idea would be preposterous. I merely state the case to show the difficulty of getting at what we want to know—a horse's best.

We will suppose we have an untried three-year-old: let us see how many trials we should want to learn his true forte. We try him as to time with 7st. at one, two, three, and four miles, to ascertain his best length, bearing in mind what is fast time for each—four trials.

We now try him three lengths with 8st. to see what weight does—four trials.

Ditto, ditto, ditto, with 9st.—four trials.

By these twelve trials we have got some insight into his speed at different distances under different weights; but our work is only half done yet, for these trials have been all run in one way—namely at best pace from end to end, and this may by no means suit the horse, or rather suit: so, though we may have found out what he does best running in this way, we know but little of him as yet; for if he has done any or all of these trials badly, we may have upset him by continued pace, and he may be a race-horse still, and a good one, in races run in a different manner: and if he has, on the other hand, done any or all well, he may still in another way do better.

To ascertain this we must now select a trial-horse whose qualities we precisely know, and who we also know will run kind; and we must go all over our ground again, beginning at a mile with 7st., and making the pace such as to try the colt's speed, courage, and temper in finishing—four trials.

Ditto, ditto, ditto, with 8st.—four trials.

Ditto, ditto, ditto, with 9st.—four trials.

We have therefore had twenty-four trials before we can ascertain how to best place and run a horse—a very pretty dose this, and a very pretty animal our nag would come out after such an ordeal—a good two years' work, and enough too! And yet we could not get at what is a horse's best with less trial than I have supposed as a case. I trust, therefore, it shews I am not far astray in venturing an opinion, that many horses are constantly beaten, not being altogether bad, but from being merely bad in the races they are entered to run for, from our not knowing in what way, at what length, and at what weight they will run better; and this must always to a very great degree be the case more or less. By the time a horse is regularly stumped up, perhaps, and only perhaps, we may learn the secret, and then have the pleasing satisfaction of reflecting, that had we precisely known our horse's forte, we have had an animal in our possession that would have made our fortune.

If, therefore, it is so difficult for any one, however interested he may be in a horse, to ascertain his best qualities, can we be surprised if many a horse in a public training stable, unless he is a favorite, is continually running, and of course continually losing, in races where he never should have been placed; for if a trainer does in an ordinary way his duty to a horse, he conceives he has done all that his duty requires. It is not to be expected that a man with a dozen horses under his care will rack his brains or exercise his ingenuity in considering how to make the most of each individual horse for the benefit of the owner, whether as it regards his treatment or running. It may be said he ought to do this: we know he ought, we all ought to do a great deal we do not do: so ought trainers, though I do not mean to say they fail in this particular more than the generality of men; but whether they ought or not they won't. The regular routine is gone through like the business of a parade. Commanding-officer, officers, non-commissioned officers, privates, and band, all go through the duties of their class, and do it mechanically and according to rule: the trainer does the same; so do the boys: they as mechanically take down the bales, set beds fair, feed their horses, strip and dress them, saddle them, put on the rack-chains, put up the bales, and then look out for their own feed: they as regularly return, take down bales, bridle their horses, mount, and ride them out: they walk them all round the yard for a time: though some may be as wild as hawks, others require kicking along, still as a rule they all do the same thing. They are then exercised, take their gallops according to their age, are walked, get their water, are dressed, shut up, and so forth. This is all right and proper; the trainer has done his duty; so have the boys; that is, they have done their bare duty, and there has been no wilful neglect: in short, all has been done that with horses of ordinary constitutions, appetites, rate of going, and temper, could be required: but all horses are not possessed of all these ordinary qualities; consequently ordinary treatment won't do at all. The trainer does what perhaps brings a horse into condition, but few trouble their heads as to what will bring him into the very best. So, supposing first the horse in point of condition to be six or seven pounds worse than he might be brought to by studying his constitution, temper, and a variety of other things—and then in point of weight, distance, or the mode of using him in a race, we also make him six or seven pounds below what he would be under different circumstances—we get our horse nearly a

stone under his real mark, or something bordering on a distance; yet under such disadvantages I am satisfied many run. In some proof of this:

Four years since, a little mare was offered me for sale at a very moderate price: she was then four years old, and had been running with little success. The fact was, she had always been put in too good company; and though in shape and make perfect, and a little epitome of beauty, her owner feared four-year-old weight would stop her; she was under fifteen hands. I sent for an acquaintance of mine who loves a little leather-plating, telling him the circumstances that induced the owner to sell her, and venturing an opinion, that, though a dwarf, she could go on. He came and bought her, and last year at Southampton

#### TIGER HUNTING.

The following details of the mode of catching the "most beautiful and cruel of beasts of prey" the Tiger-Leopard, or Jaguar of South America, is from the pen of a gallant officer, long resident at Monte Video and the adjacent districts:—

"You ask me to give you some account of our sports in this distant part of the world, knowing my ardent attachment for European field sports whilst a neighbour of yours. Our species of game here is not very numerous, but rather formidable, as you will admit after perusing these lines. When I say the game is not numerous here, I confine myself to what is considered such by the inhabitants. A good sportsman, you know, will make all game that comes to his net, or rather his gun, where personal courage is required, or risk incurred. I shall confine my remarks in the present instance to our most potent enemy, and who becomes an important object of the chase, from the danger which ever attends his presence, and the value of his hide when killed. The latter is the principal inducement with the natives for hunting the jaguar, but it is also from a dread of his talons and the "irresistible armature of his deadly jaws." The natives have a great dread of the jaguar (*Felis onca* of Linnaeus), being impressed with the belief that it prefers their flesh to that of the white men; they are probably what may be termed by a Highland schoolmaster, "more accessible," being less encumbered with clothing. The American tiger is larger, but lower on the legs than the European, and is by far the most formidable animal of the New World. Like all the feline species in a state of nature, they are almost continually in action, both by night and day. They either walk, creep, or advance rapidly by prodigious bounds, but they seldom run, owing, it is to be believed, to the extreme flexibility of their limbs and vertebral column, which do not preserve the rigidity suitable to that species of progression. Their bright commanding eyes seem to glow with unearthly lustre upon the least excitement.

"Having described thus far our 'game,' let me say something of the sportsman, and he generally consists of the *guacho*, as he is termed in Buenos Ayres, or *guasso*, as he is called in Chili. The *guacho* is a veritable centaur; he passes the greater part of his lifetime on horseback, and horse-flesh forms the greater portion of his food. His horsemanship and power of throwing the lasso are truly astonishing. His facility, however, is the result of constant practice from their earliest years, the boys amusing themselves with the lasso as soon as they begin to run about. Cats and dogs are the first game of these infant Nimrods, which in due season is followed by a diligent exercise of their skill amongst the domestic poultry. The lasso, I believe, is of Oriental origin, and dates from a remote period. It was used in the army of Xerxes, by a certain shepherd tribe belonging to the immense Persian Empire. The word lasso is derived from the Spanish *lazo*, signifying a noose or slip knot. The howling of the jaguar is a joyful sound to the *guacho*; he mounts his horse, and is beyond the horizon in no time. He wears generally, I may say universally, a felt hat with an enormous broad brim, tied under his chin by a ribbon. A hole is made in the middle of a large piece of cloth, cut circular, through which he pokes his head; it is under this mantle, called a *puncho* in the country, that he shelters his shoulders. The skin, turned inside out, of a horse's hocks, serves him for boots, and covers his feet all but a triangular hole for the admission of a spur. His smalls are of leather, and he carries in his right hand a long coil of strong cord, the two ends of which are strongly fastened to the girth of his companion in danger. With this equipment the *guacho* penetrates the deepest solitudes; he braves the Pamperos, the formidable plains of South America, and returns to Monte Video, with his nobly acquired booty.

"Jep, of whom I am about to speak, was a little man, all nerve, all muscle, five feet at the most in height. The continual habit of riding had bent his legs, as that of continually smoking the *cigarette* had blackened his fingers and teeth; he was always smoking, everlastingly so, and never went to sleep without a quid of tobacco in his mouth. In all his life Jep had never drunk a glass of wine or a drop of rum. Water, ale, onions, bread, and occasionally a piece of beef, or broiled horse-flesh was all his food.

"How many jaguars have you killed?" I inquired of him one day when I met him in a coffee-house at Monte Video.

"I never kept an account," he replied, "but I have taken twenty-five with the lasso."

"But they tell me, however, that you and your son have nearly depopulated the country."

"They belie me," said Jep, dashing his glass in his fury against the wall. To account for Jep's passion it will be presently shown that among the

Races he told me she had been one of the luckiest little animals he ever had: adding, "at high weight I was hardly ever beat on her." Her forte had never been found out as a three-year-old; and had she run till doomsday at light weights she would always have been at best a respectable third or fourth. I must add, the gentleman to whom I sold her trains and rides for himself; at least he rides at anything over 9st. The mare before had always been in public training stables: whether there had been less attention shewn in one place than another, I do not feel justified in giving an opinion upon. I merely state facts—the mare hardly ever won a race under one treatment, and hardly ever lost one under another.

*guachos* it is thought *infra dig.* to be obliged to kill the beast without previously having caught him with the lasso, all the honour and skill being considered to lie in this operation.

"My stiletto has killed a great number of them, it is true," continued Jep, "but my son will take revenge for his father's defects, and up to the present moment he has never missed a single jaguar with his lasso. He is my pupil—my faults no longer exist. But," added he, "if you will accompany me, I leave to-morrow for the Pampas, and promise you that you shall be present at a game which you will not forget as long as you live."

"I accepted readily so pleasing an invitation. We took our departure, and it was not many hours ere we were in the presence of a formidable foe.

"The *guacho's* horse, with an apparent wonderful sagacity, seemed to be well aware that if he turned on either side he had no defender left; he, therefore, faced the enemy, headed him, as a sailor would say, to prevent his getting on his (the horse's) broadside. His master spoke to him encouragingly in monosyllables, but which the intelligent creature seemed perfectly to understand. His legs appeared to tremble, he foamed from his extended nostrils, and snorted aloud; his ears, like his mane, stood erected, and his eyes appeared rivetted on those of the tiger, watching his prey. This was the moment, the most anxious of all my life. The *guacho* uttered a few sentences to himself, of which I could catch, 'Here is my enemy, who would dispute these immense plains with me, let me not be beaten, or my comrades will treat me with contempt. Be quick, Jep, and you shall carry his fine hide to Monte Video, or Buenos Ayres, and be able to sell it for five or six piasters; let it be known that I take him at the first throw of the lasso. Now's the time.'

"About 25 feet at the most separated the two combatants; they approached each other still nearer, Jep no longer talked, but twirling the redoubtable lasso, pricked the flanks of his horse with his immense trident spurs, the jaguar crouched to make a spring at Jep's breast, the lasso more rapid is let fly, in an instant the tiger is encircled as if by a boa, and Jep drags the ferocious beast captive.

"To give you a thorough idea of this skilful and extraordinary manoeuvre, I must add a few words on the mode of using the lasso. It consists of a rope made of twisted strips of untanned hide, varying in length from 15 to 20 yards, and is about as thick as the little finger. I have already noticed that it has a noose, or slip knot at one end, the other extremity being fastened by an eye or button to a ring in a strong hide belt, or surcingle, bound tightly round the horse; the coil is grasped by the horseman's left hand, while the noose, which is held in the right, trails along ground except when in velocity, during which, by a peculiar turn of the wrist, it is made to assume a circular form, so that when delivered from the hand, the noose preserves itself open until it falls over the object at which it is aimed. To use such an implement when standing quibe still would seem to be a matter of sufficient difficulty, yet the *guacho* will throw the lasso from horseback, and at full gallop, with immense precision, this facility, however, as before observed, is the result of great practice from almost infancy.

"In conclusion, Jep trailed the animal some distance, until from his efforts to escape from his awkward position, the beast became somewhat exhausted and dizzy from hopeless exertion; then the rider dismounted, and, taking one of the longer daggers which he invariably carried in his boot-tops, approached the animal, and at one thrust plunged it into the heart of the tiger leopard. The hide is free from any other puncture, and Jep's reputation is uninjured. If, however, the lasso had been ill directed, the jaguar would have seized on the rider, or fixed himself on his horse's flanks; in that case the *guacho's* only resource is to resort to his daggers or stilettos, and, without dismounting, he fights the furious animal, until, from repeated wounds, he is obliged to leave his prey. An interval of two minutes is sufficient for re-adjusting the lasso: it is again thrown, and there are few instances indeed in which the *guacho* is known to fail capturing his prey a second time. But then, ashamed of his want of skill, he leaves his prey to the myriads of crows which hover over his head, returns to the city without any prize, and tells his friends he has not met a jaguar in his rides. The rides or excursions of the *guacho* are often of some months' duration. Finally, after two days' hunting with Jep, I begged and prayed of him to return with me to Monte Video. Keen sportsman as you consider me to be, I had seen enough of it. Pheasant and partridge shooting, and occasionally the wild boar, is all very fine; but those who start in the morning in chase of the jaguar or tiger (in America as in Asia), do not always return home, and the sport is often purchased with much regret and many tears.—Adieu. "J. A."

## STATISTICS OF THE DERBY, 1846.

The following analysis of the Derby for 1846 will show the number and names of the produce of the different stallions arranged as "lots," with the numbers as they stand on Dorling's list:—

<b>HETMAN PLATOFF—12</b>	<b>PHOENIX—5.</b>	<b>GLAUCUS—3.</b>
10 Turpin	78 Eneas	116 Diomed
27 Hoorah	100 Fireman	194 Benedict
38 Tom Tulloch	79 C, dam by Tomboy	<b>PANTALON—2.</b>
96 Headman	94 C—L'Hirondelle	102 F—Fair Helen
115 The Don	121 C out of Miss Iris	187 Punch

## A "ROUGH RIDER'S" HINTS TO YOUNG SPORTSMEN.

**HORSEMANSHIP.**—To mount your hos properly isn't learnt in a day; and I don't think there's one in ten that knows how properly to set about this first step of hosmanship. In my younger days, when there was upping stooks at all the inns, and at the bottoms of long hills, it didn't much signify how you got on the back of your hos; but, in the present day, when you can't get a lift except from a stable bucket, you had need set about the work scientifically, or else, instead of vaulting into the saddle, you'll tumble into the kennel. There, now, look at that little fat man, with one toe in the off-stirrup, and the toe of his other foot bearing up his body parallel with the hind leg of the hos. What a picture; up he goes with a muscular jerk, and lands between the cantril of his saddle and the stern part of his hos's tail. He 'didn't know the way to mount, or else he wouldn't have been there. Here comes another; he puts one hand on the pommel, and the other on the cantril of his saddle; takes the stirrup as it hangs, gets two feet off the ground, and doesn't know what to do with his right leg; the hos feels a great weight on his near side, runs back to free himself from it, when down comes the hosman on his back, with a shock like an Irish pavier. Here's another Mr. Nimble-go-Nine-Pin; he snatches the mane with his left hand, lays hold of the stirrup with his right, tugs up his body with the aid of these pulleys, the hos flinches under his grip, and over goes the hosman on the outside, in great danger of breaking his neck. Now, the proper way to mount your hos is this—go up quietly to the animal, take the rein of the bridle loosely in your left hand, stand about two inches from the hos's shoulder, turn your toe into the stirrup like a dancing master teaching the first position, on the left-hand side, let your body follow, give an easy spring, throw your right leg over the saddle, your foot into the stirrup, and "off to go."

**Dresses.**—Amongst all the changes and fashions that I can put my eyes upon on sportsmen, the last is in boots. First of all the round huntin cap went out, and a small brimmed hat was put on like a dandy tailor on a Sunday; then the come-all-round jolly, comfortable-looking coat was put by, and a modern jim-crack thing put on like cabbaged shreds out of a made-up piece, and now, instead of the neat boot with mahogany or well-varnished tops, men either put their legs in mournin by wearin black tops, or else they disfigure their legs with a boot like a gouty stockin. Now, rally there's nothin, accordin to my taste, that looks so well as the old top boot; then you can get off and on hos when you please; but how is this possible with a couple of hos hides pulled up over your thighs?

**LAW.**—Never go to law about a hos, for, if you "do," ten chances to one but you'll be "done." Why nobody can argue the case of a hos but him as has tried him; and though the councillors may be clever fellers at understanding pints of law, and the jurymen pints of beer, yet what do they know about the pints of a hos that they never see, and has never put into the witness box; 'tis a different sort of knowledge to any other, so my advice is, if you happen to buy a good hos, keep him; if a bad one, chop him; but don't go to law about him. As for witnesses being brought forward to give a hos character, 'tis all stuff; why every hos has got a new character with a new master; and unless he could speak and tell his own faults none of his old masters will be likely to tell of them. Whenever I ask a man the character of his hos, he'll swear directly 'tis the very best he ever crossed. Very well, then, suppose you buy a bad hos that's unsound, you've got to prove it against all the masters that the hos ever had before, for they swear he was a good'n when they sold him.

**SINGULAR FORTITUDE OF A HORSE.**—A short time ago one of the horses running in the Highflyer coach betwixt Coldstream and Kelso, unfortunately had one of its thigh bones broken, caused by the foot getting into a rut on the road. The coach was immediately stopped, and the poor animal detached from the coach and placed at the side of the road. Upon the coach starting with the other three horses, to the surprise of driver and guard, as well as the passengers, the lamed horse, on hearing the crack of the whip, started off and galloped alongside the coach for nearly a mile, running upon three legs, the broken one dangling quite powerless; and had it not been then stopped, it might have run on a good way farther.—*Kelso Mail.*

**RECIPE FOR A RAILROAD.**—Take a quantity of land of the greatest level you can find, and then stir up with the greatest flats in your connection.

# ADVERTISEMENTS.

**THE MAMMOTH HORSE. — MR. Carter's** Colossal Horse continues to attract crowds of stors, but as he will positively leave town in a few days for America, Mr. Carter begs to remind those persons who have not yet seen this remarkable animal, aptly termed; the "Model Horse," that the present time is the only opportunity they will have of viewing the largest horse in the world. Count D'Ossay says, "he is a magnificent animal." The Mammoth horse is 20 hands in height, and weighs 2,500lbs. He will be exhibited at the Egyptian Hall, Piccadilly, from 11 a.m. till 9 p.m. Admission 1s.

**TOM THUMB SONGSTER,**  
Containing Eighty Songs.  
Nos. 1, 2, 3, 4 of this now popular Song Book are still on sale.

## POETRY FOR THE MILLION!

15, CRAVEN BUILDINGS, DRURY LANE, LONDON.

IN this age of rapid motion, when velocity appears to be considered the summum bonum of existence, it is hoped it will not be deemed a presumption, that Mr. CHARLES SLOMAN, the only English Extemporaneous Poet, Author and Composer of the "Maid of Judah," "Daughter of Israel," "God Preserve the Queen," &c., &c., &c., respectfully announces, that he is prepared to write Songs, Poems, and Essays, in Prose or Verse on any subject, at the shortest notice, and on the most reasonable terms. The most inviolate secrecy (if requested) may be relied upon. Persons making up albums, or those who wish to express the language of the heart in flowing rhythm and soft-sounding rhyme, will find this a desideratum they might in vain have sought at other hands.

Election Squibs in Fifteen Minutes.—Advertising Tradesmen contracted with by the week, month, or year.—Acrostics in one hour.

N.B.—A song extemporised and sung upon the instant.—Mr. C. Sloman informs Stewards of Public Dinners, and persons giving Parties, in Town or Country, that he is willing to negotiate for his attendance professionally, as Improvisator, Sentimental, and Comic Vocalist.—Remember! Mr. Sloman is the only person who composes a Song extemporaneously, embodying the Toasts, Speeches, and entire detail of a Public or Private Meeting.

Copy the Address! 15, Craven Buildings, Drury-lane, London.

## UNDER ROYAL PATRONAGE.

Perfect Freedom from Coughs in Ten Minutes after use, and a Rapid Cure of Asthma and Consumption, and all Disorders of the Breath and Lungs is insured by

## DR. LOCOCK'S PULMONIC WAFERS.

The following particulars of Rapid Cure of Asthma, of Fourteen Years' Standing, are from Mr. J. E. Bignell, Holyhead-road, Wednesday, and addressed to Mr. Ladbury, surgeon there:—

Sir,—When I had the first box of Dr. Locock's Wafers from you, I was labouring under one of those attacks of Asthma, to which I had been subject now for about fourteen years. I have had the best medical advice the neighbourhood could afford, including two physicians at Birmingham, and one at Wolverhampton, but with no success. My breathing was so very difficult, that I expected every inspiration to be my last. As for sleep, that was impossible, and had been so for several weeks.

The first dose (only two small Wafers) gave me great relief—the second more so. In short, the first box laid the groundwork for the cure, which only four boxes has effected and I am now quite well. I remain, Sir, your most obliged, G. E. BIGNELL.

The particulars of hundreds of Cures may be had from every agent throughout the kingdom and on the Continent. DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

TO SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1ld., 2s. 9d., and 11s. per box; or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Brix Lane, Fleet-street, London. Sold by all Medicine Venders.

## THE EARL OF ALDBOROUGH

CURED BY

## HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY,

Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had been unable to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment in case of any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines throughout the CIVILIZED WORLD, at the following prices:—1s. 1ld. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

## THE SILENT FRIEND; a Medical Work

on the infirmities of the Generative System, in both sexes; and on the loss of reproductive power, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Sympoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 15, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Sanger, 150, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street, Soho; E. Dipple, 42, Holywell-street, and all Booksellers.

THE CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Sympoms.

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

PERRY'S PURIFYING SPECIFIC PILLS, price 9s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter), £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 15, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.

At 106, Duke-street, Liverpool, every Thursday, Friday, and Saturday; and 10, St. John-street, Deansgate, Manchester, on Mondays, Tuesdays, and Wednesdays.

ONDON.—Printed by JOHN WORTHAM, of 313, Strand, Lin in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIFPLE. — Thursday Feb. 5, 1846.

# THE Sportsman's Magazine

LIFE IN LONDON

No. 40. FOR THE WEEK ENDING FEBRUARY 21, 1846. THREEPENCE.

[Stamped to send free by Post, Three-pence.]

FOX-HUNTING SCENES, NO. V.—DEAD BEAT.

OW long or how far we had been running were matters on which I could give but a very vague opinion. My total ignorance of the country preventing any decent estimate of the one, and the excitement I was labouring under, of the other. Whether, again, Master Reynard would ever evince any signs of sinking appeared equally dubious. But from these considerations my attention was quickly taken in another quarter. To my great astonishment, I really began to fancy I was getting a peep at, what Mr. Green would call, "the left-hand" side of my horse: he hit an oak-stile I put him at, with every leg he had to his body, only just saving himself from further effects in a listless, Devil-me-care way, that spoke infinite danger; then he followed this up by refusing, three times in succession, so unequivocally and determinedly, that I felt fain to give in to him. And when thanks to a burning scent, the pack made one of those beautifully sudden and simultaneous turns right across the point I was steering for, and compelled me to pull him in to a trot, he hung so heavy on my hand, and went in such a mechanical, dead-lively manner, that I was all but convinced I had been judging too hastily:—uncertain at timber, a resolute refuser, a want of bottom, and a bad mouth.

"Come, come, Peter my boy!" said I, clapping to him again, on entering one of those doomed domains of the public, an open common. "Come come, it will never do to go and rub out all the fine things we have been performing today, in this fashion!" For a few strides he answered me gallantly enough; but the roads, cross roads, diggings for turf, and

deep cart-ruts, soon brought us to the trot again; in which he at length made a mistake, and, after tottering forward for a few yards, fell, without caring to recover himself, heavily on his side. I was on my legs in an instant, and catching short hold of his bridle, endeavored but in vain, to rouse him to a like position. Directly I loosened the rein, his head dropped perfectly inanimate, and, with a deep groan, or rather sigh, he stretched himself out in a way that at once stopped me from any further attempt.

"He's dead beat, sure enough," thought I, aloud, after looking at him for a minute or so in silence.

"Hur's dead enough any-hows," responded a countryman at my shoulder; who seemed, like one of the armed men of old, to have risen from the earth at a moment's notice. "Hur's dead enough anyhow, I reckon."

"Good heavens! d'y'e think so?"

"No, I don't; I be sure on't."

He was; and then all the events of the day at once came across me; the two or three hours' work in the sticky sides of the cover, the subsequently terrific pace and distance we had travelled, the indisputable style in which I had beaten everything else out of sight, and the courage and readiness with which my poor horse did go as long as he could go, all rose to reproach me. Under any circumstances, my case was unpleasant in the extreme; but what rendered it still more so was the unpalatable truth that would force itself upon me—the horse was'n't mine!

**The Sportsman's Magazine.**

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHISAYER.

(Continued from page 580.)

To resume the Houghton, Everton, in a match, carrying 1st 10lb more, beat Milden. For a Handicap Sweepstakes of 20 sov. each. Secundus, Duc au Durras and Fair Charlotte were placed, beating Raff and Clumsey, but it must be borne in mind that Secundus was "well in" being at 7st 10lb (four years old), while the three years old carried 7st 1lb and 7st 6lb.

The Nursery Stakes, for two years old, were won by Dexterus after a dead heat with Green Pea, beating the Free Lance, Fugitive, Tugnot, Collingwood, Morocco and Guzman (b) Polka (c). It will be borne in mind that this is a Handicap Race and that Polka carried 8st 6lb, the heaviest in the race and was beaten a long way; Tugnot at 8st ran very well. Cocoa Nut, receiving weight, beat Event. Wee Pet, receiving weight, beat Physalis. The Audley End Stakes were won by Wolf Dog; Fair Rosamond, four years old, carrying 8st 12lb, took the lead, but was beaten by the "imported," 6st 10lb, as well as by Trueboy and Yardley about a stone more; Alice Hawthorn had but 8st 3lb and yet paid forfeit. Paultons, giving 6lb, beat Duc an Durras. A very good race ensued for the Houghton Handicap which was won by Boarding-school Miss beating Fair Charlotte, Secundus, Celia, Vaudeville, and others. Another 10 st Sweepstakes among two and three years old, terminated in favour of Terrier beating Ohio, Titbit, Dean Swift, Buttress, and Benevolence; I have heard Terrier was claimed, but I cannot think Lord George had much reliance in him seeing the work he put him to. The 10 stovs. being exhausted, a Sweepstake was made up of 5 stovs. each, for half mile, which was won by Malvoisie, and she too was claimed; the Pawnbroker second, and Subscription third; won easily. In a match Hawthorn, receiving weight, was beaten by Alamode. Leopard beat the Amaryllis filly, and Pellar beat Hawthorn. Some forfeits then took place, and a meeting never equalled in the memory of any person for the clemency of the weather terminated with universal satisfaction. In my last, in speaking of the Subscription Handicap of 50 sovs., I did not allude to a dead heat between the three named; it has been mentioned to me as coupled with another dead heat at this meeting as something worthy of record, but I cannot say I am much surprised at "dead heats" at Newmarket, where they have a decided penchant for doing so very fine. As an occurrence, however, it deserves remark.

I cannot find anything worthy of notice in the WORCESTER Autumn, 1805, each with 20, and 15 added being all that was to be got there. Princess Royal beat Mildon and Lord Saltoun in one race, and Lord Saltoun beat Mildon in another.

At the CHESTER Autumn the only race of interest and bearing upon the coming Events was the Two year's old Stakes in which after a good race and a sharp set-to Vanish beat Barlesque and several others. It was a near thing, but Barlesque being by Pantaloon, out of a Maid of Honor speaks favourably for Vanish.

As is generally the case (it may be collected from these Reminiscences) that there are but few first-rate three years old, and I am not aware of one "flier;" I understand there are one or two good ones "dark;" and, that a certain nag will work "a Revolution," ere long, in the setting. For myself I think Sting a good horse, but not so good but here may be a better; the *Sunday Times* has declared "he will never win a Derby." So much for the opinion. I have no doubt that both *Salmon* and *Arkwright* will see a better figure, and therefore those who enter into the ring, and have an opportunity of hedging may safely lay out money on them now. Of *Brocardo* I know nothing, except what I all know; but *J. S. Kens* so well the "turn" of a *Touchstone*, that it is most likely he will be in high perfection on the day. The *Voluntary* colt is in good hands, and *Slane's* get have been so successful lately that he could must not be despised. One word more; your readers recollect an old line: "the way the two is bent the tree's incl. ned."

As to the fillies, so beautiful, so capricious and, I was going to say, leeching, I dare not even venture an opinion; but, Queen Anne, Duckoo, Vanish and Sapphire have done much to bring them into favour; Princess Alice has shown herself good but uncertain. *Vu'e et surete.*

## TO CORRESPONDENTS.

NIMMON, Aberdeen.—We will give a "History of Tattersall's" in an early number of our second volume, with an engraving or two.

S. WATKINS.—Much depends on the situation of the person asking the question, as regards locality, water, space, and other conveniences. Rabbits are most prolific, and therefore most profitable. They also command a readier sale for the carcase, to say nothing of the skin. Pigeons are precarious as well as require incessant watching. If kept for amusement and good, if for profit, you must not expect much.

**A YOUNG PEDERSTRIAN, Enfield.**—General training and regular exercise are the most probable preventives of muscular pains after jumping. As a *palliative*, try some castor oil and a little ammonia mixed together, and rubbed industriously on the part affected as a rubefacient.

**A SOUTHWARK SUBSCRIBER.**—Apply at Peter Crawley's, Howden will tell you how to get about it. The French Horn, Duke Street, Smithfield.

W. CALLEN.—It is rather too early yet, we opine, to take trout with worm or minnow yet we have seen, within the last week, some bright well looking fish in the shop of fishmonger in Broad street, and of another in Piccadilly. You will find a letter in p. 414, which may give you a hint; the Mole and Ravenshoe are also noticed under "Wottonian Topography;" the neighbourhoods of Esher, Leatherhead, Cobham, Dorken, and Reigate all yield good sport. Uxbridge river has fine trout, but is reputed; you must obtain leave. Merton, Mitcham, and Carshalton rivers contain trout.

These fish contain roach, perch, minnow, and charmin rivers contain trout. To the west of the chaffinch is one of the most beautiful known; it is like half a lark flattered on the upper part and so perfectly rounded that it seems as if it were a ball. It is fashen to the branch by colors and wool, and is covered outside with the different locks or mosses that grow on the tree where it is placed so that it is not very easy to distinguished he nest from the branch on which it is placed. It builds in copes and orchards. Thrushes and blackbirds, we have already fully described and figured in early numbers. Birdlime is made as follows:—Boil the middle bark of holly seven or eight hours in water till it is soft and tender, then lad in heaps in pits in the ground covered with stones, the water being previously drawn from it, and in this state left for two or three weeks to ferment, till it is reduced to a kind of muckilage. This being taken from the pit, is pounded in a mortar, to a paste, washed with water, filtered, till it is free from extraneous matters. In this state it is left, four or five days in each.

J. C. LAMBERT.—Yes; they can cut off the supply, summon you for the arrears, as for any other simple contract debt, and on non-payment you can be taken in execution, but this is rarely, if ever done. These companies always limit their proceedings to the goods, and if there is no property, do not pursue the person.

A READER.—The doe we suspect is wrongfully charged, natural causes (cold perhaps) may have taken off the weakest; there is no certainty in young rabbit's lives any more than infants of the human race. As the remaining two of the five are doing well, it is almost proof, that the mother has had no part in the other's deaths.

H. CLEVELAND.—"Nimrod" was the signature chosen by the late Charles James Apperley, Esq., the most elegant, forcible, fluent, varied and pleasing writer on Sporting subjects, England has produced. To enumerate his writings would be tedious. There have been various articles in the *Quarterly Magazine*, for three last three months, on his various writings, by the author of "Hunting" &c. &c. An answer to your question respecting the mare would be out of all reasonable scope in this correspondence column. It would ask a page to itself. The horse will soon be begun; early in the next issue. The books you write about can only be procured by chance; with the exception of a "Denonian Companion," which you will see advertised in "Bell's Life;" many bookellers will get it for you. The others are, we suppose, all out of print, and as we do not know who originally published them, can give you no information. Mr. Wright of the Agricultural Library, Haymarket, might probably assist you, if you addressed him.

T. C., Blackfriars Road.—Of course, where they fall into the memoirs of the men. Perry, the Black, and Burton fought for £30; it was a mere scratch match, got up to try the "gentlemen of colour." We shall shortly advertise the case for binding the volume.

**J. P. 11.** (Gowell Road).—Give gruel mixed with strong animal jelly as food, and the following antispasmodic drops:—Either 1 drachm, Laudanum half a drachm, *Campden* ten grains, mix, and give forty drops every four or six hours in a spoonful of water; then intermit a day or two, and give a gentle alternative, and a warm bath; wrapping the limbs in cloth.

E. D., Ensham.—Coventry Race-course is one mile and 170 yards round. Knut-ford is a round course of a mile only, and nearly flat.

## OUR WEEKLY CALENDAR.

**SUNDAY, FEB. 15th.—SEXAGESIMA SUNDAY.**

## FEBRUARY.

**GARDENING.**—Now trench vacant ground and re-trench expenses. Transplant young twigs to old boarding school, and lay out pocket money for wife's dressing. Take up country cousin whilst they are green, and plant them in boxes at minor theatres, taking care to get orders first. Turn up sofa be-seated every morning and use for sitting-room—the greatest art of gardening being to get as much out of every bed as possible, of course getting yourself out first.

NOTES OF A NATURALIST. — Among the early birds of the season is the Brown Pancake, which appears about the 24th. It is easily raised and may be cultivated in any house with sugar and lemon. The Wren, the Thrush, and the Hedge-Sparrow, have a concert together this month for the benefit of each other, and generally plume themselves on a Titi. Flocks of peewees, pocket-books, and this year's almanacs are now seen in the air by outsiders. The only boardman of the Elephant and Castle, or C's, is now where. They are now brought down by preventing-inance at them, but others are not so easily caught.

MONDAY, 10th.—Landley Murray died, 1926; a fact which the Court of Aldermen don't fail to keep in public remembrance.

**TUESDAY, 17th.**—Border Coursing Meeting, (and 18th).—Ashdown Park (open) ditto, (zu 19th and 19th).—Maxfield (the North Star) and Byron's race.

THURSDAY, 19th. — Alton Coursing Meeting. (and 20th).

FRIDAY, 20th.—C'OUGHs AND COLDS.—The popular adage tells us to snuff a cold and starve a cough. How rare ought coughs to be in the workhouse; how scarce cold

**SATURDAY, 21st.—RAIN AND TIDE TABLE.**—It will be low water mark at Capel Court and the beginning of May, when the tide will turn, and after several fluctuations will rise to its level.

## THE MOON IN FEBRUARY
